>experience is self-selected for those with inherent Morse talent/ability.

That's baloney. I have no "inherent Morse talent/ability," and yet I
have an Extra Class ticket. I didn't need the privileges. I just did
it for the same reason people climb mountains; "because it was there."
Most of the hams I know never use code. Many of them have no-code
tickets. Quite a few others cheated on the tests and couldn't send
their own call in CW. I see no evidence that your statement is valid,
particularly in recent years. Back when CW was the major method of
ham comms, then it may have been true.

More insults. Do you have a point, or don't you?

>The great majority of people do not love their jobs and some hate them.

And your evidence for this is...?

>(IMHO, you don't believe it at all and just lacked anything rational
>with which to respond).

I could expand on this issue, but I don't see any reason to. If you
couldn't see the point from my admittedly poorly chosen analogy, it's
unlikely you'd see it no matter how much I clarified it.

>Read what you said again, Glen ... the comparison to the space program
>*IS* lame ...

No, it isn't. It's not the best analogy I could have chosen, but the
point is still valid. I notice you don't try to defend the REAL
insults in your post, however. I refer to the comments about "clue
rental" and a comparison to another poster which gives you a nice "two
insults for the price of one."

>> The really sad thing is that I generally support the
>> elimination or relaxation of the CW requirements, but attitudes such
>> as yours make it extremely difficult to defend that position. I've
>> sat here and watched you insult poster after poster, and just shook my

>I'm so DAMNED tired of all the lame excuses for maintaining something
>that's nothing more than a quasi-religious fraternity hazing ritual that
>when I see another ridiculous comparison/excuse it sometimes sets
>me off ...

And I'm equally tired of the lame arguments and insults of the no-code crowd, not to mention the mind-numbing pointless redundancy of the whole religious war between pro-code and no-code advocates.

>> And then we wonder why hams have such a bad name, and why the hobby is

The attitudes of one side are no better or worse than the attitudes on the other. Also, it's a mistake to categorize the attitude of everyone involved by the excesses of a few vocal advocates.

>for taking it out on you ... I've just sort of reached the "mad as hell and
>not going to take it any more" point ...

Oh, I see. And so jumping down the throats of potential allies and possibly antagonizing neutral lurkers is somehow going to help your cause? I fail to see how your tactics are doing your case any good whatsoever.

3425. Repeater question

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-21 00:00:00 UTC
From: lens@totaltel.com
Message-ID: <5lvlvc$3lh10@ha2.ntr.net>
Source record: 197910

I am looking to put a repeater up on an emergency service band for use by my ambulance corps. We have a frequency of 155.265, but thanks to the FCC we are not allowed to put one there. I know that the "blackout" area is small, but does anyone know exactly what it is? Rather than asking where I can put it...It will be much easier if someone could tell me where I CANT put one around the 155 mhz area.

Please e-mail me, as I don't check here often...but don't forget to correct my return address to lens@totaltel.com.

Thanks for the help.

Len

3426. Hy-Gain Antenna help

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-21 00:00:00 UTC
From: JAWSMIKE@AOL.com
Message-ID: <864249277.5009@dejanews.com>
Source record: 197911

Hi. My mane is Mike Martinez, KC7VCZ. I recently inherited an old Hy-Gain vertical (Model 18 AVT/WB-A Vertical) The year of manufature was 1976. Upon reassembling it, I discovered that the bottom piece--M1--was missing. Since it originally came out of the box pre-assembled to the mounting bracket, the manual said nothing about the dimensions for identification like it did for all of the other pieces. I was able to determine the diameters, and bought a 6' piece of aluminum tubing. I would greatly appreciate it if someone could tell me the unknown length. Thanks!JM

3427. Help with Qmodem

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-21 00:00:00 UTC
From: georgie@aztec.asu.edu
Message-ID: <5lvq1g$aq3@news.asu.edu>
Source record: 197912

I have been given a couple of old XT's. I'm running Qmodem into a Hayes 1200 baud external modem. Both of them give me double characters when I hook up to my FREENET. Going into the Freenet through another system works ok. I've tried all the modem switches and half and full duplex. Can't find any local echo option in Qmodem. Anyone help? Thanks

I guess I should clarify, only get double characters when I type.

George in Phoenix

You should try a turnstile on 10m and maybe consider a preamp if the rcv
is not already very hot ...

RS15 should boom in, 10 or 12 (whichever one is still working, can recall
because
I've been off for almost a year) is ok with this type of antenna, or even
an horizontal
dipole (rotatable prefered, this is what I used in conjuction with my
UHF/VHF/SHF
antenna system for high orbit stuff).

> My problem with the LEOs is that I can rarely *hear* them

> > You are driving along and somehow your car runs off the road and down
> > a hill. You are hurt and can't make it back up to the road. Using
> > your ham radio knowledge, you quickly build a spark gap transmitter
> > from the car's ignition system.

I'm interested in any documented evidence where a person
was so severely injured that he couldn't "make it back
up to the road", yet paradoxically was able to extricate
ignition system components from a mangled car and assemble
a spark-gap transmitter.

And since the original post concerned itself with CB,
I'm also interested in documented evidence showing
that spark gap emergency monitoring coverage is greater
than CB! (Yeah right.)

> > You send out a detailed distress
> > message in Morse code by touching two wires together. Help quickly
> > arrives and you are saved.

I am also interested in evidence showing that the combined
efforts of the "numerous" ;-) radio amateurs who still actively
monitor spectrum for spark gap CW distress emissions offer
a greater emergency monitoring coverage are than that offered
by the cellular phone system.

When overheard by non radio amateurs, talk like the quoted
material above truly makes it appear as if we live in the
dark ages and may in fact have lost all touch with reality.

One can always make the argument that IF "this happens"
and THEN "that happens" and also "so and so" happens,
spark gap transmission is the only way out. But as far
as the actual probability of a response to your transmission,
rank the following common methods in order of chance for success....

CELLULAR PHONE

VHF amateur radio

Citizens Band

MADLY BEEPING ON THE HORN (no Morse code required)

Flashing the headlights on and off

Screaming

Someone randomly happens upon the scene and helps

Spark Gap CW

Pro-coders: try your very best to be honest. ;->

3431. US License Examination Opportunities Scheduled 5/21/97 to 9/30/97

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-21 00:00:00 UTC
From: "Bart J. Jahnke, W9JJ" <vec@arrl.org>
Message-ID: <33836DE1.62A8@arrl.org>
Source record: 197916

You can Email the ARRL/VEC (or this page's content
administrator) at "vec@arrl.org".

Have you tried our ARRLWeb ExamSearch Page? If not, why not
give it a try at "http://www.arrl.org/arrlvec/examsearch.phtml"

*****>> When viewing this list, if the list appears to be cut
off (stops somewhere in the middle of the state's listings)
try downloading the entire file then viewing it off line.
Some WEB browser programs have exhibited this problem.

****

Have you recently passed your test? Find out your new call sign and/or
license privileges using the following World Wide Web URL (or by using
the phone number shown below):

http://www.arrl.org/fcc/fccld.html

or look for the University of Arkansas Little Rock Web page
FCC call signs look up link link (http://www.ualr.edu/~hamradio/)
link from the ARRL Web page at: http://www.arrl.org/

At ten (10 days) after the test session call 860-594-0300.

****

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 10 days since you took you examination?

If so, call ARRL at 1-860-594-0300 (8 am to 9 pm weekdays, eastern time)
to find out. The FCC National Call Center can be reached at 888-225-5322.

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

****

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether
they be for the Reciprocal Permit for Alien Amateur Licensee,
Form 610-A; Club/Military-Recreation/RACES station, Form 610-B;
or Form 610 for Amateur Operator/Primary Station License.
Form 610-V is the special application for persons seeking a
Vanity call sign (see below).

Several FCC forms, including Form 610, are available through the
FCC's fax-on-demand service by calling 202-418-0177
(request form "000610" for Form 610, form "006108" for Form 610V).

You can obtain FCC Form 610V along with FCC form 1070V and FCC
vanity call sign information fact sheet PR 5000, number 206v)
by writing ARRL, 225 Main Street, Newington, CT 06111.
You must include an SASE.

Form 610 or other forms, including Form 610V, are also available
from the FCC via the internet at:

http://www.fcc.gov/Forms/

or

ftp://ftp.fcc.gov/pub/Forms/

The FCC Forms Distribution Center will accept FCC forms requests
by calling 800-418-3676.

****

LICENSE RENEWALS OR MODIFICATIONS

Effective in late October 1996, the FCC ceased sending amateurs
renewal reminder notices using Form 610R. Amateurs may still
renew the licenses by mailing a standard Form 610 directly to
the FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245. There is
presently no charge to renew or otherwise modify your license through
the FCC.
In mid-July 1996, FCC authorized VECs to accept and electronically
submit data for FCC license renewals or other amateur license
modifications. Therefore, ARRL Members may now choose to send their
standard Form 610 (not 610R) to us at the ARRL and we will submit
the application data electronically to the FCC--which the FCC
typically receives and processes overnight. This is a free
ARRL members-only service.
The W5YI Group currently sends a W5YI-version Form 610R to
amateurs notifying them of their impending license expiration.
Only W5YI can accept the W5YI-version Form 610R electronic processing.
The cost of the service is $6.
License modifications that can be handled by any of the above
sources include RENEWALS, or ADDRESS, CALL SIGN or NAME changes as
supplied on Form 610. Forms 610-A, 610-B and 610-V can presently
only be processed by the FCC (per FCC instructions).

****

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 860-594-0301. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to MCI ID: 215-5052.

****

THINGS TO BRING TO EXAMINATIONS

Bring a photo ID along with a second form of identification (else bring two non-photo forms of ID); bring your original FCC license and a photocopy of your license (if you are currently licensed); bring the original and a copy of any Certificate(s) of Successful Completion of Examination (CSCEs); if necessary, bring a scientific calculator (that does not have the ability to store formulas); bring a pen and two pencils; and be sure to bring payment for the test fee if charged by the VEC.

****

EXAMINATION CREDIT IS AVAILABLE AS FOLLOWS

By presenting an original, current FCC-license, the following exam credit will be conveyed to the applicant by the VE Team:

Novice - Elements 1A and 2
Technician (dated after 2/14/91) - Elements 2 and 3A
(*,**)Technician (dated before 3/21/87)-Elements 1A, 2, 3A and 3B
Technician Plus - Elements 1A, 2 and 3A
General - Elements 1B, 2, 3A and 3B
Advanced - Elements 1B, 2, 3A, 3B and 4A
Extra - All elements

Footnote:

(*) For grandfather Element 3B credit, only an original license or a copy which was issued on or before 3/21/87 is acceptable by VEs. VECs may be able to allow such credit based upon an original CSCE issued on before that date which shows Element 3 credit for passing the (then) 50 question Technician/General written test. If such documentation has been destroyed, the FCC will itself issue the necessary verification. To obtain such verification, acceptable by all VE Teams and VECs, write to FCC and request a "Letter of Verification of Technician License Held Prior To March 21, 1987". Mail (or fax 717-338-2696) your request to: FCC, 1270 Fairfield Rd, Gettysburg PA 17325-7245. If you include reference to a fax number in your reply, the FCC will fax your verification letter to you.

Normal turnaround at FCC is 3-5 business days after receipt.
(**) Any person holding a now-expired Technician license issued
before 3/21/87 can obtain credit for Elements 3B and 1A
(per Section 97.505(a)(8,9)) of the FCC Rules.

By presenting an original Certificate of Successful Completion
of Examination (CSCE), the following credit is conveyed:

* For Technician licensees: A CSCE showing Element 1A, 1B or
1C credit qualifies the holder for Technician Plus HF privileges.
The CSCE may have been issued more than 365 days earlier.

* For others: A CSCE issued up to 365 days earlier conveys credit
for the element(s) shown as passed. A Physician's Certification
on a Form 610 is acceptable by a VE Team for 365 days after the
Physician's signature date. Once accepted by the VE Team,
assuming the applicant qualifies for a General or Advanced license,
a CSCE is issued showing Element 1C (or "Physician's Cert. and
Release: 1C") credit is valid for 365 days toward an Extra class
license.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 860-594-0300 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "vec@arrl.org" or via MCI Mail to
MCI ID: 215-5052. ARRL/VEC Fax 860-594-0339.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,Zip-code,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
Fax 860-594-0339. The 1997 test fee is $6.25.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;

Apples and oranges, Andy. But just to have a new idea out in cyber-ham
land, what if the speed required was lowered?

Try Pride Radio & Television in Wheaton, IL. Operated by the guys who
ran the Ham Radio Toy Store until February. They are quite familiar
with ham equipment, and have had no problems with repairs on my stuff.

Ask for Roberto, tell him N9SRT sent you.

630-668-9577

Good luck,

Mark Harris
N9SRT

And some of us found the theory side just as hard. I am one of those people. I could have just memorized questions and answers, but to me thats worthless. This is also why I'm in favor of dumping the "question pool" and giving real theory exams. However, I worked hard on something that I was slow to understand and did not enjoy. Not to say the 20 WPM was easy! I just did not have to work as hard on that because I used it almost every day. Thats what it takes. The reward was my Extra ticket. I'm sorry Cecil, I just don't buy this argument. I have seen too many people do it to believe that its that big an obstacle to overcome. Also, how would you feel about a reduction in the speed required at different levels? Just trying new ideas out. What do you think?

> operational element.

Please try againto get it straight, Mike ... that should read "even the
ARRL's own surveys show that less than 40% of all coded, HF hams
EVER use Morse" ...

The meaning fo the accurate statement is far different that what
your distorted statement attempts to purport ...

You consistently try to imply that "40% of all ham use Morse
on a regular (or even exclusive) basis" ... that's a pile of crap and
you know it ... you're dishonest, Mike ... and that's why I dislike
you ... not simply because we disagree, but because you're
dishonest and try to take advantage of every opportunity to
distort the truth to try to prop up your weak, irrational position.

> >AMTOR and packet are much
> >better as a data mode of getting thru where cw can't. Any ham can use
> >AMTOR and packet therefore it is a better mode to use for public
> >service emergencies.

Actually there are much better modes than AMTOR and HF packet is
abysmally poor ... but there are better digital modes and there are
more people using them than MD and his cronies would have you
believe ...

> Something like <10% of amateurs use AMTOR or packet on HF on a regular basis.
> Why test for something <10% of amateurs are going to use? It would seem
> that AMTOR/packet are great deal in more jeopardy of becoming extinct than
> CW is.

AMTOR/packet have been substantially replaced by PACTOR and Clover and
PACTOR II on HF ... which have been adopted by progressive (digital) operators
for
just the reason that they are far better than AMTOR/packet ...

> >Here in the Atlanta area the local governments

> H&W traffic.

Packet gets used a lot (VHF/UHF, local) in "tactical" traffic, too ... though
voice is often easier and more efficient ...

Sorry to correct you Glen, but you are wrong

Actually MW0 is the suffix for Wales. Having run out of "G" calls, the
"M"'s began use about a year ago.

I managed to stay out of this discussion for quite a while, but will now add my 2 cents worth. I currently hold an advanced class license and have decided to try for my extra class. While not certain i'll be able to master the code for the 20 wpm portion i intend to try. I've hooked some paddles to my rig and am working contacts on the novice portion of 40 meters (the only ones i can currently copy). It may be that i just don't have the talent for code that it takes to copy 20's, but i'll never know unless i try. So i guess my 2 cents worth is, something worth having is something worth working for! I originally got my license to escape the cesspool that the CB band became. I certainly don't want the ham bands to become the same way. Which unfortunately i beleive will happen if we allow everyone to lazy to master the code on the HF bands. Not a master of the code! But proud i made the effort to meet a standard worth having. Standing by for the flames. STAN in honolulu

Try the egg beater antennas from M2. You will need to use the ground
plane with them (make yourself or order from M2. This gives a horiontal
at the horizon and circular in a 45 degree cone straight up.

Good Luck,

Bill Harwood

Let me see if I got that right. Did Fred say the way to solve your
repeater problems is to use a BIG amplifier? Now where have I
heard that logic before? Maybe from some folks with 18 wheelers?

Yup, if we all use high power, things will work out fine.

There is a mod that the dealer or Yaesu can do to change the 15.7Mhz
IF to 17.7Mhz. It is detailed in their Technical Bulletin No.
TB9422A. This was issued in 1994 and later models should be moded,
although I found mine was not and had the dealer do it FOC. The mod
does help.

OK guys, I read all the time about the theoretical uses of CW. Here are some real-life cases were the knowledge of CW made a difference during 1996 & 1997.

I was helping out during Field Day and I recognized that the CW station operators made a mistake identifying a callsign. They were grateful that I was able to ply my skills as a Qualified CW Man!

One day last year I amazed my boss at work when I told him that I had just successfully passed my 13WPM CW test. He asked "What the heck is CW?" I explained that it is arguably an "Art-Form" that should be preserved like Black and White Turner Movies. "Damn straight!", he said.

While going to the grocery store I was able to tell the callsign of the local 2 meter repeater without shelling out the BIG BUCKS for an ARRL Repeater Directory. The money CW has saved me is incredible.

I monitored a CW Station transmitting obscene comments at 10 WPM one night on 75 meters. Those Extra Class boys on 3945 had no idea that from the comfort of my own home that I was able to decipher the secret meanings of the messages they were sending. What a blast!

I learned that 3 shorts, 3 longs, and 3 shorts, means that someone is in deep shit.

>
> Regards - Bry

The ouput impedance will nominally be 144 ohms @ 100 watts and 120 volts output. It was probably meant to drive a 150 ohm line, with line to voice-coil transformers at each PA location.
To use as a modulator you would need to match the plate impedance of the amplifier you are modulating. As an example, if the transmitter ran 126 watts input and drew 180 Ma. at 700 VDC, the nominal plate impedance would be 3900 ohms. You would thus need a 150 ohm / 4K ohm transformer capable of handling at least 65 watts for 100% modulation.

>experimental station using SS.

If the number of amateurs does not increase very rapidly or the number of hours a single amateur is on air remains constant, then the increase of SS usage means a reduction of use of the traditional modes. So there is going to be a soft transition from one mode to an other. Luckily SS and FM can coexist.

A few years ago, there was a great debate over frequencies for packet radio. All current users defended their allocations violently. In practice, most users disconnected the mike from their rig and connected to the TNC, thus the use of FM-simplex and repeater channels dropped dramatically and the activity concentrated on the packet frequencies (that over here were allocated from the all-mode segment). In retrospect, it would have been much more effective from spectrum management point of view to allocate one end of the FM-simplex segment for packet radio and let the border between packet radio and FM-simlex channel vary from place to place (or even from time to time if possible). IMO, the controversy between FM and SS is quite similar.

> I think the potential for interference to
>existing users needs to be analyzed.

This is very hard to analyze theoretically, since it also involves human behavior, which is hard to predict :-). For instance, when the FM channel width is splitted, the deviation is reduced and the threshold effect does not improve as rapidly as before when the signal level is increased. Also due to narrower bandwidth, the signal is likely to suffer more from multipath (mobile flutter). The subjective

signal quality is reduced and can lead to an increase in power levels
to restore the situation, a side effect that might be hard to predict
in theoretical studies. In a similar way, it can be hard to predict
what the average transmitter power in SS systems is going to be in
real life situations, in particular, if two way power control is used
(as in cellular systems). It also depends how gracefully the codec
degrades the subjective sound quality, when the average signal
strength is no longer quite adequate. Thus, it is very hard to
theoretically predict the interface on traditional systems, when the
transmitting power of the interfering stations are hard to predict.

>I am not saying that SS is a bad
>thing, but that a lot of factors need to be considered as the amateur
>community finds ways to foster its use and development in amateur
>communications.

While SS and weak signal work do not coexist very well or at all, the
relations between SS and FM should not be that problematic.

>
>>> The weak-signal folks have needs that are in direct conflict with the

>>Again I disagree ... their fear of "devastating interference" is
>>substantially unfounded ... in the vast majority of situations, where
>>even moderate physical separation exists, the SS signals are likely to
>>be undetectable to the narrowband "weak signal" folks ..

There should not be too much problems with only _ONE_ SS transmitter,
but evidently the noise floor will increase.

>
>Okay, I'll bite: If I take a 3 kHz bandwidth narrow-band system to the
>top of a large hill 10 kM from an area where there are 100 SS stations
>using voice across 4 MHz, how much will it raise my noise floor?

This is a quite unrealistic situation, you mean 100 stations on the
air simultaneously. If we assume that a repeater is idle 95 % of the
time, then that would need 2000 stations installed to have 100
stations active on average. I doubt that you could co-ordinate 2000
repeaters into 4 MHz and into a 10 km radius from a hill :-). Taking
the average ham density, that would mean a population from 600000 to 2
millions within that area and if we think about several user for each
repeater, we are talking of total population numbers of several
millions, so I think that your initial assumption is on the extreme
side.

I tend to agree. Most repeaters are at sites where RF pollution is
quite high already. I imagine SS signals would mostly be below the
ambient noise floor. We have to run CTCSS on our 440 machine just to
keep it from constantly repeating all sorts of intermod trash. At
least SS shouldn't add to intermod products, as additional FM stations
do.

If SS were to start on the 440 band, and perhaps be limited to a
relatively low power, at least we could try it out and get some
empirical data on how it worked and co-existed with existing systems.
The 430-440 band is lightly used in most areas, anyway.

>I am afraid that "the LONG run" is too far in the future to do us any
>good ... again, we need change NOW ...

Change for the sake of change isn't going to save Ham Radio. IMO, the
only thing that will save Ham Radio is a compete re-thinking of what
the service is and what it's supposed to do. Let's face it, you can't
come up with much evidence of our right to hog valuable spectrum
without stretching the facts well beyond the point of credibility.

>> I will add that, in the short run, evolution is less
>> harmful than revolution, and we need to find an incremental step in the
>> right direction, and solutions that accomodate the rather widespread
>> differences of opinion hams seem to have about all aspects of amateur
>> testing.

Ham testing is mostly irrelevant to the survival of ham radio. You could hand out licenses free on the street corner, and with the lack of publicity that ham radio gets, you'd probably not increase our ranks ten percent. Face it, without more hams, LOTS more hams, we don't have a prayer of saving our best bands; the VHF/UHF/Microwave frequencies that represent the future of communications.

>Why must we "bow down and pay homage" to the minority view that
>runs the ARRL??? I'm sorry, but if we try to "accomodate" the backward
>status quo, there's not going to BE anything to improve "in the LONG run."

In my view, the ARRL is about as irrelevant as the Morse Code controversy. I'm sure there are some dedicated individuals in the League, but the Old Boy mentality seems to be as firmly in charge as ever. I'l like to see figures on how many new Techs are members. Hardly any of my ham friends are members, and in the 21 years I've been a ham, we've NEVER had an election for SM here in Idaho. I don't even get a ballot so I can write in a name. The reigning SM gets "declared elected" until he quits, and then usually some hand-picked successor gets the mantle. Nobody cares enough to mount a challenge.

>> Most hams have some technical
>> interests, but not at the level that interests you.

"Most?" I guess that depends on how you define "most" and "technical interests."

>I don't honestly believe that most of the current coded hams have
>much technical interest ... I believe that the majority are gamers
>and yackers ... "CBers with an attitude" ... who simply want to
>*use* radio as a medium for completely non-technical pursuits.

Except for your strawman about "CBers with an attitude" I see nothing at all wrong with that. As long as Ham Radio retains the privileges of experimentation, building, and innovation, I really don't care how many Appliance Ops we have in the ARS. After all, somebody has to purchase and use all those pretty toys that the techies develop, build, and install.

Incidentally, I'm not ashamed to admit that I came from CB, and I definitely have an attitude. It's beneath the dignity of a real ham to denigrate another service, and ranking on CBers accomplishes nothing other than giving some hams with an ego problem a reason to feel superior. A reason that's seldom valid, in my observation.

>I'd like to see that change ... I believe it must if our service is
>to survive the first decade of the coming century ...

Face it, you're never going to increase the percentage of "techie"
hams unless you make the tests so onerous that it will decimate the
hobby.

>> This is truly the crux of the questions at hand. If we could stick to
>> it, rather than discussing who is a cretin and whether someone who

Tom, I've got a 96 Saturn and am running an Alinco DR-600 from the same spot that you have your Kenwood. I followed the battery feed from the engine compartment fuse/relay block back into the cab to the secondary fuse panel which is on the right side of the center of the instrument panel (by the front passengers left shin.) Found the heavy gauge feed there feeding the secondary panel and pulled my rig power at that point. Solved the problem of how to get DC back to the radio. The Alinco has a detachable control head, so I mounted the control head to a block of wood fitted into the opening under the Broadcast radio and put the guts of the radio back in the trunk.

Hope this helps. (BTW, I don't have any alternator whine, etc, etc from this setup.)

Hi Carl,

This is where we differ. I think that anyone can learn code, just as you think anyone can learn theory. You have stated many times that its just a simple encryption of the alphabet. So, why can't someone as intelligent as an EE's (no sarcasm intended, I sure can't do what they do) learn this simple encryption to advance within their chosen hobby? This is the fundamental difference in our opinions. I do agree a good first step to resolution would be to drop the worthless "question pool" and replace it with valid theory testing. But as long as code remains as widely used as it is today, I can't see just dropping it. Yes, I do have an Extra class but I don't for one second think that it in any way gives me, or any one else that has one, some kind of "status". Its just the next license up from where I was and "because it was there" I got it. A ham is a ham. From Novice to Extra class, were all the same. The idea that dropping the code test will cause a massive influx into the hobby was disproved with the no-code tech license. We got some good people, but it was not the flood that the no-code side predicted and we still have slow growth. So I guess what needs to happen is some REAL debate over what we should to resolve the problem of slow growth. Fighting among ourselves sure won't do it. I'm trying from my end. I'm a VE and teach code and theory classes when I can. I'm open to NEW ideas gang! Lets start kicking some ideas around instead of each other. What do you say?

73,
K4XA

>communications.

Isn't there a good possibility that technical solutions to
interference problems might be developed, if systems were actually on
the air to make the observations and to provide the experimental
platforms?

>Okay, I'll bite: If I take a 3 kHz bandwidth narrow-band system to the
>top of a large hill 10 kM from an area where there are 100 SS stations
>using voice across 4 MHz, how much will it raise my noise floor?

You'll never know until you try, and that scenario is unlikely to
happen soon, anyway. When it does, why not program the SS stations to
avoid problem frequencies? How about notch filters or noise blankers
to reduce interference from SS stations? If hams can run FM repeaters
on mountains polluted with millions of watts of RF in close proximity,
why can't they deal with some new ideas?

>If memory serves, ARRL is the one who has asked for the SS rules change
>that is on the plate. We have been criticized by some of both the
>weak-signal digital folks.

"Weak signal" is something that always amuses me. I run a half watt handheld to work a repeater, and yet an EME station running a hundred kilowatts ERP is a "weak signal." Riiiiight. What's so wonderful about working EME, anyway? It's not like it hasn't been done a thousand times already. "Hello, moon!" Yeah, that's a thrill.

Excuse my sarcasm here, but ham logic sometimes escapes me. I sat here in my shack when the first ham transmitted from the space shuttle and listened to local hams make fools of themselves trying to make contact. I never keyed up once, since I knew that communicating was not a matter of skill, but of brute force. The distance involved was much less than working our solar powered repeater 70 miles away, so where's the challenge? I enjoyed listening to the local pileup, observing the doppler shift on my base rig, and playing with the handheld to see if I could hear the shuttle better with the rubber duck held vertical or horizontal. But I digress.

>The dinosaurs were made extinct by a sweeping change, according to the
>latest views. When the asteroid hit, it was the luck of the draw as to
>who made it and who did not. I do not want to take my chances.

The sweeping changes are already underway, and have been for at least a decade or more. Hams must adapt or perish.

>work together for the common good is what will determine how we fare.

It ain't never happened yet, but Hope Springs Eternal.

Many, if not most, hams became hams precisely because they could not interact well with other people. "Ham Cooperation" is almost as much of an oxymoron as "military intelligence." Sorry if I'm starting to sound like Burt here, but I've seen way too much of this petty infighting among hams to retain any illusions.

It isn't a question of learning the code for most people (though it may be
for some). It is a question of being able to develop FAST ENOUGH conditioned
reflexes and FAST ENOUGH handwriting to copy at the required speed.

How would you like to have only a fraction of a second to do each of the
calculations in a (randomized) written test?

Hello,

Name is Tim, call is WB6WQA. I have been inactive for
about 5 years on HF, and have sort of lost track where
we are on the 11 year sunspot cycle.

The 10M band has always been my favorite band; is this
band due to open anytime soon? My class of license is
advanced, and I run about 100 W on USB with a 3 element
yagi at about 60 ft or so. How does it look for this
fall - winter? Maybe this summer is the time to get up
that yagi for 10...?

Any comments greatly appreciated. Thanks!

Tim Watkins

I just received the latest issue of QST, and on the last page there is an ad for the FT-8100. In the specifications it says "Cellular and 900 MHz Cordless Phone frequencies blocked". 900 MHz cordless phones operate from 902-928 MHz, the same spectrum as the 33-cm ham band. WHY is the government mandating blocking reception of a HAM BAND?!?!? I am sick and tired of the government trying to dictate to us what we can and can not LISTEN to! Listening is not a harmful activity, so enough already! As far as I knew, the only band on US receivers that is supposed to be blocked is the 824-849 MHz and 869-894 MHz CELLULAR band (and even that is stupid!). If anyone knows if and when the 900 MHz band was declared illegal to listen to, please let me know.

Remove "spam sucks" from my return address to reply.

: I have the desire to work the repeater, but have an aging FT690r, and the
: repeater requires a CTCSS tone at 71.9 Hz.

: Okay, so I have a CTCSS board, and fitted it to the rig. It works!!, but
: where does the tone need to be injected to the TX chain?? If you have
: worked on this job, I would be very pleased if you would share the
: information with me.

: Also just one niggling doubt in my mind....my freq. counter can only go to
: 1Hz resolution, and I have set up the tone to just "flicker" between 71 &
: 72 Hz, how accurately does the tone need to be set?

: I shall look forward to receiving, your replies to my plea for help, and
: also to getting the rig working on the repeater.

The best place to insert CTCSS tone is after all filtering, etc. Most transmitters have a deviation control as a variable resistor from the last audio stage to ground. The wiper (variable part) is connected to a large capacitor which acts as a high pass filter and DC block. The output of the tone board (assuming it has a level control) would be after this capacitor.

The exact frequency that will open the repeater depends on many things such as the accuracy of the tone squelch circuit and it's bandwith. Although the specs are pretty narrow (about 1 half of 1 percent), in practice this rarely is the case. If the repeater uses mechanical filters such as reeds (very old technology), it will probably be less forgiving than an electronic filter.

To adjust tone boards properly you need a standard to calibrate them against. I use a radio shack HTX-202 for 2 meters. (Not much but it's what I've got). I use no antenna on the 202 and a dummy load on the transmitter under test. The transmitter is set to the lowest possible power and the HTX-202 is moved close enough to the transmitter that it will give me an s9 reading, but not higher and with CTCSS squelch off give me some feedback.

I then adjust the tone level to the point that it reliably breaks the squelch and then go up a little bit. I then back it off unitl it no longer breaks the squelch and back up again to the "up a little" point.

I then check it by going up and down on the HTX-202's CTCSS frequency setting to make sure it opens up where I want it. I know I am limited by the HTX-202.

Since you are only using one repeater, it would be better to adjust the tone level and frequency using the repeater, but I expect that doing so will

get you banned from it :-)

Geoff.

You (correctly) did not say "...ALL other modes are not". There are
modes that will get through
well after CW has faded into noise. CLOVER comes to mind. Such being the
case, should we require CLOVER proficiency exams?

More to the point, this is a HOBBY. If my enjoyment comes from weak
signal work, great! I should be ALLOWED to work it any way I want.

I disagree. I'm a new ham, licensed for less than six months, and I have an
interest in CW. I don't neccessarily think it should be required for HF
privileges, but it is a fun mode, with emphasis on _fun_.

And, it's not at all hard to learn Morse. I studied to get my 5wpm to upgrade
to Tech-Plus and ended up passing the 13wpm test. Going to take the General
written this weekend... :)

It was demonstrated before the congressional subcommittee that the PRo26 could pick up full strength cellular images in the 360-385MHz range by shorting out pins 12 to 14 on IC1 on the underside of the RF board. Since the Pro26 happened to be "the" radio in their faces at the time, they chose to pick on that radio.

It's easy to forget that there are people in many countries that
don't have internet access. Maybe they don't have personal computers,
or telephone systems are unreliable, or they just can't afford it.
Lots of them ARE hams, however, and are very interesting to communicate
with. Using a 100 watt output HF radio, a dipole, and operating CW will
allow you to have many, many interesting QSO's with people in other
countries. It's much more difficult to do that with 100 watts and wire
antennas using SSB. CW signals get through better with less power and more
modest antennas than voice signals do.

And, it's FUN!

ARLX013 G2UK and ZL2GX, SK

The New Zealand Association of Radio Transmitters (NZART) reports that its former contest and awards manager Jock White, ZL2GX, died May 17, 1997. He was an NZART life member. In 1948, White became one of the first ZLs to attain DXCC. In June 1960, he became the first amateur to receive the DXCC 300 award and was on the honor roll in the late 50s and early 60s. In 1959, White was among the group of three hams that QST jointly designated as top DXers.

The former chairman of AMSAT-UK, A C ''Doc'' Gee, of Oulton Broad, Suffolk, died May 19, 1997. He was 84. Licensed in 1935, Dr Gee was a charter member of AMSAT UK and served as its chairman from 1979 until 1992. He wrote the satellite column in Radio Communications for several years and was active on the satellites until a few weeks before his death. He was a member of the Royal Naval Wireless Auxiliary Reserve, which led to a life-long interest in Amateur Radio, and a member of the London Wireless Club (now RSGB). His wife, Marjory, and a son and daughter survive. A service will be held May 29 in Oulton Broad.

>

It's all relative to what you enjoy doing WITH Amateur Radio. If you want
to use VHF packet to communicate around your city, then stay with a no-code
license. If you want to have inexpensive, DIRECT world-wide communications
with people in other countries, learn morse code and use CW on the HF bands.
Sure, PacTOR-II and Clover work great with low power, but not all hams can
afford the hardware for those modes.

If you want to talk to people of other cultures, in any part of the world
with the most affordable technology, you need to use CW.

VHF Packet sure won't do it..

>catch on to things. Gee, what do you think Jim caught on to?

The fact that amateur radio is largely a bunch of elite, snobbish individuals who aren't worth his time or effort. He quickly realized that he'd have more fun with his old friends on 11-meters. He also realizes that this is a hobby...and if it ain't fun, why bother? Rather than waste his life engaging in endless battles with the self-appointed repeater police, control freaks, and other assorted geriatric misfits who largely make up the amateur population, he has decided to cut his losses and get out before he makes the mistake of investing large amounts of time and money into the hobby. Trust me, there are many others like him. Present company included.

Larry, there is a schematic for an optically-isolated keying
circuit on my web site:

http://www.qsl.net/ae0q

It's on the page with Contest Photo's and Information.

Depending on which software you use, the circuits (there are two) will
key a transmitter from either a serial port, or the LPT port. There are
only 4 components and they fit in a DB-9 or -25 shell. Almost any
opto-coupler will work, just change the pin-outs to match it.

It's good to optically isolate the transmitter from the PC ports, it
keeps stray RF out of your computer.

3483. Alinco DJ-580 acting strange

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-22 00:00:00 UTC
From: "Richard K. Neimeyer" <richard108@earthling.net>
Message-ID: <3384CE57.1247@earthling.net>
Source record: 197803

I have an Alinco DJ-580 HT that is giving me trouble.

On the 2 meter side I can receive ok but I can't transmit voice. The transmit indicator blinks when the transmitter is keyed. On the 440 side I can transmit ok but I cannot receive. Strange indeed.

Any advice out there. I will try something I did not try yet. I will try to reset the radio (losing all the frequencies but it's no problem for me to reinstall the frequencies I use often back in memory) and see what happens. I kind of doubt if this will correct the problem though.

Any opinions or fixes can be sent to me at richard108@earthling.net

To all radio amateurs

SB QST ARL ARLB027
ARLB027 FCC revises 610s

The FCC has just released a new Form 610, dated March 1997, that includes a space for your Internet address. The new form is available via the FCC's Internet site (http://www.fcc.gov) and via the FCC's fax-on-demand service at 202-418-0177, to obtain Form 610, the form number to request is ''000610.''

The form is much the same as the previous Form 610, dated March, 1995, except that item 3A asking for the applicant's ''Internet Address'' is included on the same line as the street address. The environmental impact question, formerly item 6, has instead become a statement in the applicant certification section where the applicant certifies that ''the construction of the station would not be an action which is likely to have a significant environmental effect (see the Commission's Rules 47 CFR Sections 1.1301-1.1319 and 97.13a).'' The former item 7 has become item 6 on the new Form 610.

According to staff members at the Gettysburg FCC office, the FCC will continue to accept any of the three Forms 610 (dated November 1993, March 1995 and March 1997) until further notice.

In addition to the new Form 610, a revised version of the electronic Amateur Station Vanity Call Sign Request form (FCC Form 610V) is now available on the Internet at http://www.fcc.gov/wtb/amradsrv.html. Under ''Amateur Station Vanity Call Sign System'' choose ''Interactive Vanity Call Sign Application.'' This version allows a user to file multiple applications using one FCC Form 159 (Remittance Advice), thus permitting several applicants to file vanity applications at the same time and combine their fee payments. The fee will calculate and preprint on the FCC Form 159, depending on the number of applications submitted. Detailed instructions are available by clicking on the item number on the Internet form. Previously, applicants had to complete a separate FCC Form 159 for

each application submitted electronically.

Electronic payment is not yet available, and applicants must mail a completed FCC Form 159 with payment to FCC, Box 358994, Pittsburgh, PA 15251-5994, immediately after submitting any electronic application(s).

For technical assistance, contact the FCC Technical Support Group, 202-414-1250. For general questions regarding the application or fee, call the Wireless Telecommunications Bureau Consumer Assistance staff, 800-322-1117.

SB QST ARL ARLB026
ARLB026 ARRL comments on petition

The ARRL will file comments in response to an FCC Petition for Rulemaking from Checkpoint Systems Inc--a manufacturer of electronic article surveillance (EAS) systems that use frequencies in the 1.7 to 10-MHz range. EAS systems are used to deter theft in retail stores and other locations. Checkpoint has asked the FCC to change its Part 15 rules to expand the frequency range and power level of EAS systems. Checkpoint wants the Commission to permit EAS operations in the 1.705 to 30-MHz band at a maximum radiated emission level of 1000 uV per meter (measured at a distance of 30 meters) and a maximum conducted emission level of 3000 uV. Current rules permit a maximum radiated emission level of 30 uV per meter (measured at a distance of 30 meters) between 1.705 and 30 MHz, or 100 uV per meter between 1.705 and 10 MHz. The current conducted emission limit for such devices operating between 1.705 and 10 MHz is 250 uV.

Checkpoint says its EAS system can detect tags concealed within or attached to protected articles by using an RF sweep over the frequency range of operation. Typically, systems are set up so that customers can only exit via an EAS-equipped gate. Checkpoint's EAS equipment currently operates within the 1.705 to 10 MHz band and is regulated as an unlicensed intentional radiator under Subpart C of Part 15. Under Part 15 rules, such devices may operate without restrictions on bandwidth, duty cycle, modulation technique or application, but must comply with specified radiation and emission limits and protect licensed services from harmful interference. Checkpoint says it needs the higher power levels to overcome ''increasing levels of ambient RF noise in commercial establishments.'' The expanded frequency range, the company says, will allow for greater flexibility in deploying EAS systems and reduce the potential for false alarms.

The company already holds an experimental authorization to operate EAS equipment within the 7.4 to 9 MHz and 8.2 to 10-MHz bands at up to 1000 uV per meter and says it has received no complaints of interference.

Checkpoint's Petition for Rulemaking was received by the FCC on April 28, 1997.

NEW HAM TOYS DEBUT AT DAYTON HAMVENTION 1997

It most definitely did not rain during the Dayton Hamvention! An upbeat crowd reveled in three days of beautiful spring weather May 16, 17 and 18 at the Hamvention--the world's largest annual ham radio gathering. Hamvention Chairman Dick Miller, N8CBU, estimated that between 27,000 and 28,000 people attended Dayton this year, and many vendors reported brisk sales (some even ran out of available stock and had to have new units rushed to Dayton), reflecting an overall brighter outlook within the hobby.

For many hams, Dayton is an annual pilgrimage--an opportunity to renew on-the-air acquaintances face-to-face, to seek out flea market bargains, or to be the first on their block to see the hobby's newest toys in the flesh as manufacturers and vendors hope to wow the crowds with their latest offerings.

One of the more intriguing pieces of gear that attracted the curious came from Kachina, a company largely unknown to most hams. The Kachina 505DSP computer-controlled HF transceiver, which its manufacturer calls "a new approach to Amateur Radio," has no knobs, buttons or meters--nor a front panel for that matter. It's a compact box you interface with and control via a Windows-capable PC! Kachina, a US firm based in Arizona, has been well known in commercial radio circles for more than two decades. Under development for almost three years, the 505DSP offers 100 W output on all MF and HF bands and DSP filtering in the second 40-kHz IF. (The only crystal filter is a six-pole crystal "roofing" filter in the front end that has a 20-kHz bandwidth. All other receive filtering is done using DSP techniques.) Operator control is via the PC mouse and keyboard using on-screen icons and pull-down menus. A microphone, key or keyer paddle plug into a panel that fits into a standard hard-drive or CD-ROM bay on your PC. The Kachina 505DSP will sell for just under $2000 (not including the PC). It's scheduled to be available in July.

Ten-Tec, Collins and ICOM also demonstrated panel-less DSP PC-controlled HF receivers at the Hamvention.

Tiny hand-held VHF, UHF and dual-band H-Ts captured the imagination of the Dayton crowd. Yaesu, Alinco and Standard debuted diminutive H-Ts. Yaesu describes its new VX-1R as the "world's smallest dual-band hand-held with wide receiver coverage." It offers 500 mW output (or 1 W with external power), a rechargeable lithium ion battery, and 290 memories. It will be available July 1. Alinco debuted its DJ-S11T economically priced, pocket-sized 2-meter H-T--a companion to its DJ-S41T for 440 MHz. Pending FCC approvals, Alinco also hopes to have its "revolutionary" DJ-C1 2-meter "micro-transceiver" on the market later this year. The super-thin transceiver is only slightly larger than a credit card and about as thick as a typical pocket calculator. Both the DJ-S41T and the DJ-C1 put out about 300 mW. (A DJ-C4 for 70 cm also is in the offing.) Standard introduced its flexible and very compact C510 dual-band hand-held that provides 1 W output by itself and up to 50-W output when coupled with an optional accessory unit.

Potential buyers and the just-plain-curious also got their first look at Yaesu's new FT-920 transceiver that covers HF and six meters. The 100-W transceiver incorporates DSP features on both receive and transmit.

Kenwood rolled out its new Sky Command system that permits remote control of its TS-570 or TS-870 transceivers via two H-Ts and an interface box.

Drake returned to the Amateur Radio market with the TR270, a desktop two-meter FM transceiver that includes a built-in AC power supply and independent, dual-band receive capability in the 420 to 470 MHz and 136 to 174 MHz ranges. The Drake TR270 puts out 25 W.

Ham radio manufacturers said they sensed greater optimism about the hobby among those that stopped by, coupled with an upswing of interest in HF transceivers. As Chip Margelli, KJ7A, of Yaesu put it: "Overall, it was a tremendous weekend which exceeded our most lavish expectations." Doug Wynn, KB6YZD, of Alinco, also was ecstatic. "We were very impressed with the size

of the crowd and the interest they showed in our products," he said. Dayton Hamvention 1998 is May 15-17.

FIRST VICE PRESIDENT MENDELSOHN DEFENDS LEAGUE IN DAYTON DEBATE

ARRL First Vice President Steve Mendelsohn, W2ML, debated former HR Report editor Joe Schroeder, W9JUV, as part of a "ham radio town meeting" broadcast live via the Internet as part of the Dayton Hamvention. The Saturday afternoon face-off was the first of four during a forum addressing the future of ham radio. Ham Radio & More radio host Len Winkler, KB7LPW, was the moderator.

Responding to the question, "Is the ARRL doing all it can to promote the future of ham radio?" Schroeder--who made it clear he was a League member and critic and not a League basher--asserted that the League wasn't doing enough to fend off challenges to our bands and has not been effective in assimilating no-code licensees and newcomers to the hobby.

Mendelsohn assured the gathering of some 150 onlookers that the ARRL was working--sometimes quietly and behind-the-scenes--to "educate those in Congress who would sell our frequencies" about ham radio and its contribution. Focusing specifically on the Little LEOs issue, Mendelsohn said ARRL representatives were, at that moment, in Geneva, Switzerland, "promoting the idea that [low-Earth-orbiting satellites] are a good idea for some other band," while other League efforts promote the hobby's public service contribution to local decision makers.

Mendelsohn said the League is "only the sum of the input of its members," and he encouraged individual hams to approach newcomers and "show them the magic" of ham radio. "It's called Elmering--one on one," he said. Mendelsohn explained that a system is in place to alert section managers and club coordinators to all newly licensed individuals in each section, but he said that Headquarters has not gone out and directly sought newcomers. "One hundred people in Newington cannot do what 172,000 members can do," he said.

When Winkler took questions from the audience, Schroeder supported a call from one ham for direct membership election of the ARRL's president. Mendelsohn declined to offer an opinion on the suggestion, but pointed out that it would require action by the League's Board of Directors and a change in the by-laws.

Long-time League member Larry Roll, K3LT, urged those on hand to support the League and to get involved. "It's the organization we have. We must steer it," he said.

Mendelsohn concluded that the League was "doing all that it can, within financial constraints, to promote the future of ham radio," while Schroeder maintained that there were "still a few areas that need improvement."

Other issues debated during the two-hour long forum included whether to set aside band segments where contesting would be banned, whether the Internet was killing ham radio, and whether the CW requirement for HF privileges should be abolished. The forum Internet broadcast was produced by Amateur

Radio Newsline's Bill Pasternak, WA6ITF (who also participated in one debate). TAPR's Greg Jones, WD5IVD, arranged the Internet hookup.

LEAGUE TO COMMENT ON THEFT-DETERRENT SYSTEM MAKER'S PETITION

The ARRL will file comments in response to an FCC Petition for Rulemaking from Checkpoint Systems Inc--a manufacturer of electronic article surveillance (EAS) systems that use frequencies in the 1.7 to 10-MHz range. EAS systems are used to deter theft in retail stores and other locations. Checkpoint has asked the FCC to change its Part 15 rules to expand the frequency range and power level of EAS systems. The company wants the Commission to permit EAS operations in the 1.705 to 30-MHz band at a maximum radiated emission level of 1000 (V per meter (measured at a distance of 30 meters) and a maximum conducted emission level of 3000 (V. Current rules permit a maximum radiated emission level of 30 (V per meter (measured at a distance of 30 meters) between 1.705 and 30 MHz, or 100 (V per meter between 1.705 and 10 MHz. The current conducted emission limit for such devices operating between 1.705 and 10 MHz is 250 (V.

Checkpoint says its EAS system can detect tags concealed within or attached to protected articles by using an RF sweep over the frequency range of operation. Typically, systems are set up so that customers can only exit via an EAS-equipped gate. Checkpoint's EAS equipment currently operates within the 1.705 to 10 MHz band and is regulated as an unlicensed intentional radiator under Subpart C of Part 15. Under Part 15 rules, such devices may operate without restrictions on bandwidth, duty cycle, modulation technique or application, but must comply with specified radiation and emission limits and protect licensed services from harmful interference. Checkpoint says it needs the higher power levels to overcome "increasing levels of ambient RF noise in commercial establishments." The expanded frequency range, the company says, will allow for greater flexibility in deploying EAS systems and reduce the potential for false alarms.

The company already holds an experimental authorization to operate EAS equipment within the 7.4 to 9 MHz and 8.2 to 10-MHz bands at up to 1000 (V per meter and says it has received no complaints of interference.

Checkpoint's Petition for Rulemaking was received by the FCC on April 28.

"FIRE THAT ROCKET NOW!" ROCKOON LAUNCHED WITH JUST SECONDS TO SPARE

A team of space enthusiasts that includes several hams managed to launch a rocket bearing ATV and APRS systems from a high-altitude balloon off the coast of North Carolina on May 11. But the launch of the so-called "rockoon" almost didn't happen, according to Bill Brown, WB8ELK, of the Huntsville Alabama L5 Society--a chapter of the National Space Society. When it arrived at the launch site in Hamstead, North Carolina in the early morning hours of May 11, it was frosty and still. "Perfect conditions for a balloon flight!" Brown said. The first glitch occurred when the team found two nearly empty tanks in its helium supply. Concerned they would not have enough to lift the rocket payload, team members scoured Hamstead and nearby Topsail Beach and finally were able to purchase two tanks from a local supermarket that used

them to fill party balloons. "This saved the day," Brown said. The team managed to get the balloon and rocket payload off the ground with just five minutes left before its FAA launch window closed.

But it would get a lot more tense before the day was out.

Brown said the team got "spectacular color video" from the balloon, but the GPS telemetry--downlinked via packet radio in APRS format--started to get weak after the rockoon topped 23,000 feet. "The signal faded completely into the noise and we unable to record any more usable position and altitude reports from that point onward," Brown said. "We think that the internal antenna for the packet transmitter put most of the radio signal up and down, but very little signal made it towards the horizon as the payload headed out nearly 120 miles out over the Atlantic."

Almost an hour and a half into the balloon launch, the team estimated the balloon's altitude to be around 60,000 feet. This meant the barometric rocket safety switches would be armed and the rocket could be fired at any time, although the team had hoped to reach at least 100,000 feet before launching. Then, Brown reports, near disaster! "I happened to be looking at the video of the balloon envelope and thought that the balloon looked pretty full. Just then, one of the seams tore wide open, dumped out all of the helium and the balloon just folded up into a long streamer of plastic!"

"Fire that rocket now!" Brown says he shouted to Ed Myszka, KE4ROC, as the rocket and gondola dropped rapidly toward the ocean below. The team had just over one minute to issue the fire command before the safety switch disarmed the rocket at 49,000 feet.

As Brown relates: "Ed keyed down the 2-meter transmitter and anxiously entered the firing code via touchtones. Nothing happened! He tried another time. Nothing!" With seconds left, Myszka tried a third time. "All of a sudden there was a bright flash and a cloud of smoke and the rocket leaped out of the gondola and off towards space," Brown said. "Bits of plastic tape and the plastic covering shredded off and fluttered past the camera view as the gondola continued its rapid descent." Miraculously, the balloon camera survived the rocket exhaust blast and continued to work flawlessly until the gondola splashed into the Atlantic.

Brown said the team was treated to flashes of video from the rocket for about 30 seconds, "showing tantalizing views of the curve of the Earth." The rocket's spin caused the ATV signal to flutter in and out and make it difficult to lock onto a good picture. The rocket and the balloon gondola ended up in the Atlantic, but lacking GPS signals, the team was unable to recover them.

Brown estimated that the rocket reached a peak altitude of 38 miles--not quite "space" as the team had hoped (space is defined as 51 nautical miles in altitude). "We did set several records," Brown said. "The first amateur launch of a rockoon (rocket launched from a balloon), the highest launch of a hybrid rocket (hybrid referring to the nitrous oxide/asphalt fuel combination), and the highest flying hybrid rocket to date."

FCC ISSUES NEW FORM 610; OLD VERSIONS STILL VALID

The FCC has just released a new Form 610, dated March 1997, that--among other minor changes--now includes a space for your Internet address. The new form is available via the FCC's Internet site (http://www.fcc.gov) and via the FCC's fax-on-demand service (202-418-0177; to obtain Form 610, the form number to request is "000610;" Form 610A is "006101;" Form 610B is "006102;" and Form 610V is "006108." Form 159, of interest to some vanity filers, is "000159").

The form is much the same as the previous Form 610, dated March, 1995, except that item 3A asking for the applicant's "Internet Address" is included on the same line as the street address. The environmental impact question, formerly item 6, has instead become a statement in the applicant certification section where the applicant certifies that "the construction of the station would not be an action which is likely to have a significant environmental effect (see the Commission's Rules 47 CFR Sections 1.1301-1.1319 and 97.13a)." The former item 7 has become item 6 on the new Form 610.

According to staff members at the Gettysburg FCC office, the FCC will continue to accept any of the three Forms 610 (dated November 1993, March 1995 and March 1997) until further notice.

REVISED VANITY CALL SIGN ELECTRONIC APPLICATION AVAILABLE

On May 19, 1997, a revised version of the electronic Amateur Station Vanity Call Sign Request form (FCC Form 610-V) was made available on the Internet at http://www.fcc.gov/wtb/amradsrv.html. Under "Amateur Station Vanity Call Sign System" choose "Interactive Vanity Call Sign Application." This version allows a user to file multiple applications using one FCC Form 159 (Remittance Advice), thus permitting several applicants to file vanity applications at the same time and combine their fee payments. The fee will calculate and preprint on the FCC Form 159, depending on the number of applications submitted. Detailed instructions are available by clicking on the item number on the Internet form. Previously, applicants had to complete a separate FCC Form 159 for each application submitted electronically.

Electronic payment is not yet available, and applicants must mail a completed FCC Form 159 with payment to FCC, Box 358994, Pittsburgh, PA 15251-5994, immediately after submitting any electronic application(s).

For technical assistance, contact the FCC Technical Support Group, 202-414-1250. For general questions regarding the application or fee, call the Wireless Telecommunications Bureau Consumer Assistance staff, 800-322-1117.--FCC

CENTRAL STATES VHF SOCIETY CONFERENCE IS JULY 25-26

The 31st annual Central States VHF Society Conference is set for July 25-26, 1997, in Hot Springs, Arkansas. The conference will be held at the Clarion Resort Hotel on Lake Hamilton. A CSVHF conference rate is available. (Call 800-432-5145 or 501-525-1391 for information and reservations.)

The technical program covers a range of topics, from satellite and VHF contesting, to high-power amplifier design, antennas and propagation, and even a look at the extraterrestrial communication. In addition, antenna gain measurement and a noise figure workshop will be available, plus a display of vintage VHF and UHF equipment.

Those interested in presenting a paper, a short talk or an article for the proceedings are invited to contact Al Ward, WB5LUA. Papers are due by June 6. A family program begins Thursday, July 24, with a two-hour dinner and sightseeing riverboat cruise aboard the Belle of Hot Springs. Other sightseeing and entertainment activities also are on the family program schedule.--Joel Harrison, W5ZN

JOCK WHITE, ZL2GX, SK

The New Zealand Association of Radio Transmitters (NZART) reports that its former Contest and Awards Manager Jock White, ZL2GX, died May 17, 1997. He was an NZART life member. In 1948, White became one of the first ZLs to attain DXCC. In June 1960, he became the first amateur to receive the DXCC 300 award and was on the honor roll in the late 50s and early 60s. In 1959, White was among the group of three hams that QST jointly designated as top DXers.--Jim Meachen, ZL2BHF, President NZART

A. C. GEE, G2UK, SK

The former chairman of AMSAT-UK, A C "Doc" Gee, of Oulton Broad, Suffolk, died May 19, 1997. He was 84. Licensed in 1935, Dr Gee was a charter member of AMSAT UK and served as its chairman from 1979 until 1992. He wrote the satellite column in Radio Communications for several years and was active on the satellites until a few weeks before his death. He was a member of the Royal Naval Wireless Auxiliary Reserve, which led to a life-long interest in Amateur Radio, and a member of the London Wireless Club (now RSGB). His wife, Marjory, and a son and daughter survive. A service will be held May 29 in Oulton Broad.--Ron Broadbent, G3AAJ

IN BRIEF:

* This weekend on the radio: For your contesting enjoyment, there's the CQ WPX CW contest. See March QST, page 98 for details. Also on tap: the QRP ARC International Hoot Owl Sprint. See May QST, page 97 for details.

* Vanity update: On May 20, the FCC's Gettysburg office processed vanity call sign applications received between April 1 and May 14. Of the 919 applications, 456 resulted in new call signs and 463 wound up in the work in process (WIPs) stack for special handling. The FCC has not indicated when vanity Gate 3 for Advanced Class operators will open.

* New Vermont SM: The Green Mountain State has a new Section Manager. He's Bernard "Bernie" Capron, N1NDN, Route 1, Box 2086A, Northfield, VT 05663; tel 802-485-7400; e-mail bernie@drbs.com. Capron succeeds Justin C. Barton, WA1ITZ, of Randolph, who resigned recently for health reasons.--Rick Palm, K1CE

* Outgoing QSL Service reminder: Rates for the ARRL's Outgoing QSL Service have increased. The current rate for members is $4 per each pound of cards or portion thereof (one pound equals approximately 150 cards). A package of 10 or fewer cards sent in a single shipment costs $1. Add $1 for each additional 10 cards or portion thereof. Checks or money orders are preferred (please write your call sign on all checks). Do not send postage stamps or IRCs. DXCC credits cannot be applied toward any QSL Service fees.--Martin Cook, N1FOC

* Swarm greets flea marketers: The Dayton Hamvention flea market almost became a "bee market" late Sunday morning when a swarm of several thousand honeybees, apparently from a nearby hive, descended onto a vendor's table. Dave Lindquist, N1YMK, a former apiarist who lives in Newfane, Vermont, happened upon the scene just as another man--obviously knowledgeable about bees and possibly a ham--already had isolated the queen bee in a cardboard box and was scooping the swarm off the table's edge into the box. "There were lots of bees still in the air--more than half--but they had detected the smell of the queen in the box, so were happily joining her," he said. Lindquist said he'd been told the fire department already had been called to "blow the swarm out of the air" by freezing it with carbon dioxide, but that didn't appear necessary, and no one reported getting stung. Onlooking hams appeared unfazed, said Lindquist. "While swarming bees are normally docile due to the fact that they fill themselves up with honey reserves before they leave the hive, they still have the ability to sting if agitated." Lindquist's friend, Charlie Geib, N4AV, of Fort Lauderdale, Florida didn't take any chances. "Dave was a few feet from the scene, but I backed off about 40 feet away and still got hit by flying bees," he said.

* DXers inducted: John Dorr, K1AR; John Devoldere, ON4UN; Carl Cook, AI6V; Gordon Marshall, W6RR; and Jorge "Arturo" Bozzo, LU8DQ (SK), were inducted into the CQ Contest Hall of Fame by Bob Cox, K3EST, at the CQ Contest dinner, held in conjunction with the 1997 Dayton Hamvention. Inductees were chosen for outstanding contribution to Amateur Radio contesting. Nominations for induction are submitted by clubs or individuals. ON4UN, AI6V, and K1AR were on hand to accept their awards. W7RM accepted for W6RR who was unable to attend. LU8DQ became a Silent Key several years ago.--Charlie Morrison, N1RR

* Atlantic Division Convention award winners: Joseph Nunemaker, KD3VR, will receive the Atlantic Division Amateur of the Year award at the 63rd annual Atlantic Division Convention May 30-June 1 at Rochester, New York. Gerald Gavin, NU3D, will receive the Atlantic Division Grand Ol' Ham award, and Ron Raposo, N2JAW, will receive the Atlantic Division Technical Achievement award. For more information, see May QST, page 92 or check http://www.vivanet.com/~rochfst/hf/main96.html on the Internet.--Harold Smith, K2HC

* NJDXA 40th anniversary event: As part of its 40th anniversary celebration, the North Jersey DX Association is sponsoring a year-long operating event. Member stations will identify using the club call, W2JT/40. Each station operator will announce his or her call sign and name. The same station may be worked on different modes. Work as many W2JT/40 stations as possible by

December 1, 1997. The station with the most W2JT/40 member call signs will receive an engraved plaque at the association's annual gathering. Logs go to North Jersey DX Association, Box 599, Morris Plains, NJ 07950.--Bill Hudzik, W2UDT

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

* The HIRAM BBS: 860-594-0306.

* The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

Why do you say that ... there doesn't seem to have been a problem with
novice/tech+ ops using big PAs ... a power limit is justifiable on the basis
that the test doesn't require as much demonstration of technical savy ...
sub-bands as class distinction are completely arbitrary ... there's no
fundamental difference between any two frequencies on the 20m
voice segments ... why should things be balkanized in some eletist
fashion???

in the proposal, mere posession of a PA capable of exceeding the limit
would be prima facia evidence of violation.

Early Riser <kb9nvh@bluemarble.net> wrote:
>Can anyone tell me how to crossband with my new IC2710..

Don't forget that it is only legal to remotely control
a radio via UHF or higher. If you plan to use the radio as
a cross-band remote you must be on UHF, using the radio to
cross-band to VHF.
Also, to be strictly legal, the radio must be able to identify
ITSELF when transmitting on UHF. Your voice ID serves to
identify the 2m transmitted signal, but not the radio's UHF
transmitter, assuming that you are remote on a UHF freq.
Most radios that can cross-band don't have that capability, and
it's not legal..

just scrounged up a 7AH gell cell and wondering some ways
to charge it as I only have a 500ma adapter for charging. I
asume I need to just plug it in and periodically check the
voltage to prevent over charging?

Now for emergencies (was hoping to use it with ARES)...
If you can hook two car batterries together +_+ and -_-
can you do the same with gell cells? Read somewhere that
30 minutes with jumper cables would work!

What about pluging it into the cigarette lighter socket?
positive to positive again. The draw would only be 7A
right? So most car lighter sockets are good for 15A
and should not over heat? How long would this
take again?

Graham ... as I said in my pervious response ... I'm not (and I don't think
other code-test-elimination proponents are) saying "theory is easy" or
"anyone can learn the theory" (though I believe *most* can ...)

It's a question of what's a necessary, compelling requirement ... and
theory is undeniably a valid, compelling requirement in a technical
service ... while Morse is long outdated, abandoned in virtually every
other service, and just a recreational prefrence unrelated to the
government's legitimate regulatory purposes ... one could even argue
legitimately (and I do) that continued Morse testing is COUNTER to
the government's interest in an expanding, progressive ARS that
meets the objectives of 97.1 and "pays its way" in return for its bands.

> Hi Carl,
>
> This is where we differ. I think that anyone can learn code, just as you
> think anyone can learn theory.

I don't believe that "anyone can learn theory" any more than I believe that
"anyone can learn code" ... I never said EITHER of those things ... I will
readily admit that there are likely a small percentage of people who are
simply not intelligent enough to grasp even the basic level of theory that
is necessary to qualify one for a ham license ... THAT'S NOT THE POINT.

The point is that Morse is not a relevant or necessary for the government to
make it a license requirement ... the basic theory knowledge IS ... because
of the technical nature of what the license permits. (despite the ridiculous
arguments to the contrary by folks like "put in a box and ship it to Yaesu
MD"

> You have stated many times that its just a
> simple encryption of the alphabet. So, why can't someone as intelligent as
> an EE's (no sarcasm intended, I sure can't do what they do) learn this
> simple encryption to advance within their chosen hobby?

While I would maintain that the inate ability (musical, tonal, timing,
and other neurological concerns of a hereditary nature, etc.) to learn
Morse is HIGHLY variable, it is probably true that the number of folks
who cannot learn Morse *no matter how hard or long they try* is probably
fairly small ... this is irrelevant ... the point is that Morse is simply not
a compelling requirement for access to the HF spectrum (or any other
spectrum) and therefore should not BE a requirement ...

> This is the
> fundamental difference in our opinions. I do agree a good first step to
> resolution would be to drop the worthless "question pool" and replace it

> with valid theory testing.

I have steadfastly supported improvements in the theory test and the
test methodology ...

> But as long as code remains as widely used as it
> is today, I can't see just dropping it.

It should not be a popularity contest, particularly one restricted to
incumbents ... that's like asking the few rich people in the world
if they'd like to share their wealth with the working folks ...

> Yes, I do have an Extra class but I
> don't for one second think that it in any way gives me, or any one else
> that has one, some kind of "status". Its just the next license up from
> where I was and "because it was there" I got it. A ham is a ham. From
> Novice to Extra class, were all the same.

I'm glad that you're not professing the egomanical sort of "superiority"
that some fanatical beepers profess ...

> The idea that dropping the code
> test will cause a massive influx into the hobby was disproved with the
> no-code tech license. We got some good people, but it was not the flood
> that the no-code side predicted and we still have slow growth.

The growth was significant, and even after the "initial rush" the current
numbers and growth are MUCH better than they were before ...
and the current no-code class is still no the draw that "true ham status"
(including HF without discrimination on the basis of the "beeo/no-beep"
question) would be ... I'll bet that if you offered free lobster dinners at
a nice restaurant in "the best part of town" you'd get more takers than
if you offered a day-old burger at some cockroach-infested greasy spoon
in the "bad neighborhood."

> So I guess
> what needs to happen is some REAL debate over what we should to resolve the
> problem of slow growth. Fighting among ourselves sure won't do it. I'm
> trying from my end. I'm a VE and teach code and theory classes when I can.
> I'm open to NEW ideas gang! Lets start kicking some ideas around instead of
> each other. What do you say?

I said quite a bit right here ... I "kick" when I start to hear the same old,
tired
excuses for proping up the Morse hazing ritual ... if you want to debate
modernization
and the future of ham radio without the quasi-religious Morse dogma, I'll be
happy
to do so ... but dogma are like hot-dogs ... I like 'em well-toasted ...

The proposal for restructuring that we've been debating lately contemplates
two license classes, both with access to all HF bands, all modes, with only
a 5 wpm code test. The "higher" class would be allowed full power, to be a
VE, etc. and the "lower" class would have a power limit of say 50-250W on
HF and say 50W on the higher bands where biological safety concerns would
be more pronounced ...

It was also proposed that when the ITU treaty requirement changes, that all
Morse testing would cease ... those who wish to use Morse would still be able
to
and if they feel a need for a piece of paper that says they are proficient at
some
particular speed, they would find the ARRL happy, I am sure, to sell them one
for a nominal fee ...

More MD distortion ... exams "that reflect a basic knowledge of all modes ..."
sure sounds like a theory test to me ... and I'll bet it sounds like a theory
test to most rational readers, too ...

> Apparently, the RAC FASC saw no need for either theory or CW testing.

More MD strawmen ...

amateurs.

At least the Canadians elected leaders with the cajones to do what's right
even if it's not the popular whim of the mob ... though I suspect most
Canadians
are more sensible than MD would imply ...

If you think that's the only reason for initiation rites and
continuation of tradition, you don't have a very good understanding of
the concept. Incidentally, I never said "hazing" anywhere in my post.
Initiation rites do not equate to hazing. I also said nothing about
keeping anyone out of the hobby.

This fall and winter should be about what it was last winter, on the dead side. Ocassional openings but not many. From now until the end of summer the band should open up nicely though, not full but decently. It'll be another year or so for the sunspot to really kick in and open the band.

I purchased AT-600 and it finally reached to my home today...
I will leave some comments.

well... I bought it for $300... I thought this would be the lowest $
or at least border line to get a new dual bander... in a good
quality...
It is not bad deal at all first of all... considering the features in
the radio.
For the features, it receives multi Rx including the cell phones with
30 KHz step (warning: it is illegal to receive cell phones in the
states. CAUTION !!) + FM radio stations. you don't receive both of
them directly though.
You can monitor two freqs at a time, crossband, decode DTMF, have
three power choices and so on. You can store up to 200 channels.
You can also modify your tranceiver very easily so that it transmits
multi Tx outside from ham freqs (warning:: it is illegal to transmit
unless you have an appripriate license within non-type approved bands.
CAUTION ! don't even think of "saying hello to cops !!")

Only the problem that I have is the heat. even with the low power
setting, you will feel warmth from your tranceiver as you transmit.
I hope it does not break down the circuit...
Otherwise, it seems to be a very good radio.

I recommend this tranceiver [AT-600]. If you consider buying it in
near future, it is a very good choice. As far as the low price and
many and many features are concerned, I am sure (not guaranteed) that
you will be happy with your investment.

I was trying to help people out there who was considering buying
AT-600. I hope this helps.

Hi Carl,

Well, its a start to a new debate but..... How are we going to
regulate it? I don't think anybody would stick to the power limit.

Graham

3505. DL0ART/am - report 5th launch

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-22 00:00:00 UTC
From: Oliver Welp <welp@muenster.de>
Message-ID: <33843732.32D0@muenster.de>
Source record: 197849

DL0ART/am - 5th launch (18-May-1997)

After quite a long break, we did it again... the 5th launch of
our balloon DL0ART/am was on 18-May-1997. The main issue about this
flight was the transponder (mode B), which worked quite nice, and
many hams took the chance to use it.

More information about DL0ART/am (pictures!) can be found at:

Internet: http://buene.muenster.de/darc/artob/homebale.htm

PR: DB0EA-8 (mailbox digipeater Muenster) -> ARTOB

Balloon launch 18-May-1997:

Launch: # 5
Launch date: 18-May-1997
Launch time: 1214 UTC
Launch site: Nienberge near Muenster, NW Germany, JO32SA

Payload DL0ART/am:
QRG/mod.: (1) Telemetry beacon: 145,200 MHz F2D & F2A
(2) 2nd beacon: 144.991 MHz F1A (call & info text)
(3) Transponder (J3E and A1A)
Uplink: 432,570 MHz \
Downlink: 144,470 MHz / +/- 20 kHz
+ beacon at 144,470 MHz (A1A)
(4) RX for remote control on 70 cm and 10 m (not used)
Power: (1) 2 W
(2) 100 mW
(3) 2.5 W
Antennas: (1) groundplane
(2) turnstile
(3) big wheels for 2 m and 70 cm
(4) 70 cm: groundplane / 10 m: lambda/4 vertical
Power supply: (1) & (4): 5 D cells LiSO2 in series (=14.4 V, 6 Ah)
(2) 1 D cell LiSO2 (3 V) and step-up to 9 V
Diameter ballon: ca. 8.5 ft
Gas: hydrogen
Parachute: ca. 8 ft
Weight: about 4700 g (over all)

The balloon has a gaz valve which can be opened to reduce the lift rate or start the touchdown procedure.

Balloon Team Members:

Ground Control: Armin (DF1QE) + Fritz (DF9XE)
DF Control: Joachim (DL3YBQ) + Ralph (DG3YEI)
DF Teams: Norbert (DL1YBR) + Oliver (DL9QJ)
Wilhelm (DG5YGF) + Kurt (DD3QQ)

Talk back of DF teams via repeater Osnabrueck, DB0CO (R 75).

(UTC)
10:30 Meeting of the team
11:15 Arrival at launch site (Muenster-Nienberge, JO32SA)
11:30 Phone call to air control Duesseldorf: launch permitted
11:40 Filling the balloon
11:50 Payload attached
12:03 Additional filling, lift rate was not sufficient
12:05 Transponder tested -> Go
12:07 Telemetry beacon switched on -> Go
12:10 Phone call to air control Duesseldorf to announce the launch
12:14 LAUNCH
12:16 Altitude already 3,065 ft
12:35 Problems ocurred on decoding the telemetry; data obviously invalid
(...)
13:55 Balloon bursted; telemetry data seem valid again
14:00 TOUCHDOWN (crash...) As we found out later, the balloon hit the roof of a farm house nr the city of Greven (JO32TC) and broke a tile (was already fixed when we came to the house... but the place could still be recognized by the red color left by the balloon).

The owner was a bit surprised (only a bit, it is a Muensterland farmer...!) and, since he read something about "explosives" on the package, called the police. The officers (almost correctly) recognized it as a weather balloon and took it to the Greven police station (was it arrested now?!). From there, they called Armin, DF1QE, on his cellular phone, since his number was written on the boxes. Shortly after that, we were able "recover" the equipment... and the beacons and transponder were transmitting when we arrived at the police station.

Tochdown site: nr Greven (JO32TC)
Touchdown distance: 7 miles

Flight Data

| Launch 14:35 h 15:55 h Touchdown

```
------------------+-----------------------------------------------
Altitude | 280 ft 12,125 ft 12,700 ft (885 ft)
Outside Temperature| 74 deg F 22 deg F - 5 deg F 46 deg F
Inside Temperature | 90 deg F 82 deg F 23 deg F 22 deg F
Battery Voltage | 14.177 V 14.311 V 14.218 V 14.059 V
-----------------------------------------------------------------
```

Results:

The telemetry data were not very useful this time; since they obviously were not correct during the time period 12:35 - 13:55 UTC. We assume it was because of the very difficult flight conditions - the balloon got into a thunderstorm, which means high humidity and low temperature. We have never had problems concerning the telemetry before; on this flight, we had trouble with during final testing and during the flight... The table shown above might not tell the very truth, but we think these data we copied are at least likely.

The transponder was a big success and worked better than expected, even though we got a report (after the flight) that we were still causing some intermodulation on the 2 m band. But the device had never been tested under "real" conditions. We already were afraid that the transponder hardly would be used, since during our final test, we did not find any stations that were able to help us testing (seems not very many people have allmode equipment for 2 m and 70 cm). But we were wrong, the transponder was very busy, sometimes the QSOs sounded almost like in a contest... Among others, stations from all over Germany, from Belgium, Switzerland, the Netherlands and Great Britain were able to use it.

```
-----------------------------------------------------------------
Here is the logbook of DL9QJ/m's transponder QSOs:
(SSB; using IC-820H / mag mount verticals)

UTC Call QTH Name
-------------------------------------------------

1250 DD7LP
1252 DK6OO
1255 DG5AAE
1255 DL3KBH Uwe
1310 DG0ODA Thueringen Daniel
1313 DK1QJ Dieter
1315 ON6UG Freddy
1320 DB7EK JO31BS Daniel
1318 DG9BHV
1325 DK1KR
1340 HB9RDE Rolf
1342 DK3WG
-----------------------------------------------------------------
```

The balloon hulk was causing the main problem this time. I think we got a very old piece, and because of that and some not very professional handling during launch preparations, we were not able to open the gaz valve the get to balloon to land, but it bursted instead.

The time between DFing had been increased to 15 minutes (was: 10 minutes), which gave the DF teams better chances "to make more miles". But sometimes, the 15 minutes periods still were a bit short.

Our 2nd beacon (144.987 MHz) obviously again (like during our second flight) had problems with frequency stability. Its deviation caused problems on FM repeaters on R0 (input on 145.000 MHz) and kept them open (concerned: DB0UH). Again, the reason seems to be the flight conditions (see above) - we had the same weather during our second flight when the same problem ocurred. Of course, we regret any inconvenience caused by that fault!

If you heard our sigs, pse send QSL via PR / Internet / buro - all will be answered with our DL0ART/am QSL cards! Any suggestion or response is always welcome!

The DL0ART/am team hopes that all of you enjoyed this experiment, as well as our previous flights. We regret that we have to terminate the project now. This is due to a substantial lack of man power (the same 2 or 3 people were always doing all the work...) and - which is the main reason - financial resources (e. g. insurance is DM 500.00 / USD 300.00 p. a.). We are just a small local amateur radio group (subdivision of DARC) and no longer able to put our money into this project.

Maybe, you will here of DL0ART/am again inspite of this - he, we have a working transponder now! Possibly we will launch a captive balloon during our annual fieldday (okay, a few hundred feet is much less than what we had on this flight, but North Germany is quite flat, and it would provide a chance for some nice QSOs). An alternative would be the flight of a manned hot air balloon, on which the transponder could be a piggyback.

Anyway, we enjoyed this project and wish give our thanks to everybody who participated.

Glen,

I'll conceed you did not use the word "hazing" but you did described it
pretty well. Meaningless initiation rites that one must "struggle"(your
word not mine)to accomplish are the epitome of hazing. I went to
military school so I think I have a clear understanding of what hazing
is. If you can't see that fast code testing keeps some people out you
just aren't looking. If you can't admit these things to yourself I'll
never convince you, not that I actually ever expected to.

Jerry

You don't have to convince me. You're confusing the argument with the
messenger. If you've been in the military, you know the esprit de
corps that all that "struggling" gives you. That has some value, like
it or not. It makes little difference what you call it, but folks DO
value something they've worked for more than something they've had
handed to them. That's human nature, and you won't change it with
wishful thinking.

Whether or not that's reason enough to retain the code test is another
discussion entirely.

I've seen a spark gap work (saw photo's of the actual spark part), but
how does it actually transmit. Is ther some type of amp? I'd be
interested if someone could explain it.

Exactly ... and the fear of disastrous consequences resulting from SS
transmissions by the ham a mile (or less) away from one's house is
essentially unfounded, too ...

> We have to run CTCSS on our 440 machine just to
> keep it from constantly repeating all sorts of intermod trash. At
> least SS shouldn't add to intermod products, as additional FM stations
> do.

Actually, in a sense, it will (in theory) since "everything" mixes with
"everything else" in any nonlinear device (like those class C PAs with
no isolators in line, or that rusty tin can leaning up against the chain
link fence around the building that houses the repeater, etc.) ... but in
a practical sense, the PSD (power spectral density) of the SS signals
is so low compared to everything else at a comparable power level that
the resulting products at any given "victim" frequency are going to be WAY
down in practice ... remember, even for 3rd order products of the 2F1-F2
variety, the IMs go down faster than the input power ...

> Change for the sake of change isn't going to save Ham Radio. IMO, the

> the service is and what it's supposed to do. Let's face it, you can't
> come up with much evidence of our right to hog valuable spectrum
> without stretching the facts well beyond the point of credibility.

That's exactly right ... and the no-code-test/modernize proponents
have NEVER advocated "change for the sake of change" ... it's ALWAYS
been "change that's needed BECAUSE (fill in the blank according to
the change proposed ___)"

It's the "we need to change ___ because of ___" that's part of the
"rethinking of what the service is and what it's supposed to do" ...
basically we need to get back to the invention, experimentation, and
other technical activities where we used to lead and make significant
contributions to the SOTA ... we still can, despite protests to the
contrary by the "I don't care how the radio works, I just want to yack
and play games crowd" ... and we need to do public service ... we
CANNOT justify our occupancy of our bands on the basis of competitive
games, collecting wallpaper, and any of the several other perversions
that have crept into the service and distorted the perception of the
raison d'etre in the minds of far too many incumbents.

> don't have a prayer of saving our best bands; the VHF/UHF/Microwave
> frequencies that represent the future of communications.

Despite the "cozy" feeling that most HF hams seem to have (you know,
the "I don't give a crap what happens to the VHF/UHF bands because
I don't use them anyway" attitude that's been expressed by some of
the beepers) ... the HF bands are NOT imune to threats in the future ...
as the spectrum below about 2 GHz becomes more heavily occupied,
and satellite systems and the orbital arc become more saturated, there
will be folks looking to return to HF or to move there for the first time ...

The SM doesn't matter a hill of beans ... even the Vice-Directors are
stuck in the wings unless/until the Director dies or something ... even
if a Vice-Director with some cajones managed to get elected, I'd bet
he'd just be ignored by the good old boys ...

> feel superior. A reason that's seldom valid, in my observation.

My only reason for using the "CBer with an attitude" term is that
the beepers contend that "without the code it'll just be CB" ...
they can't understand that the truth is that "without the technical
part, it's just CB with an attitude" ...

> >I'd like to see that change ... I believe it must if our service is
> >to survive the first decade of the coming century ...
>
> Face it, you're never going to increase the percentage of "techie"
> hams unless you make the tests so onerous that it will decimate the
> hobby.

I don't believe that at all ... just remove the barrier (code) that's kept
so many away for so long ... stop relegating those who simply don't
care to beep to some sort of "lesser" status, despite their demonstrable
technical abilities and they will come in larger numbers ...

Hi,

Thanks for reading this. I bought an old Heath IB 102 digital multimeter at a fest and need a copy of the schematic and alignment instructions to get it going. Hate to junk this one, so appreciate your help.

Will be happy to pay for copying and mailing costs.

Thanks in advance,''

Bob

Zack,

Go to K-MART, WAL-MART etc and pick up a motocycle battery charger. I
have one (Not very expensive) and it is great for keeping my deep cycle
battery topped off.

The majority of the ARRL Board members were Vice Directors before they were Directors. I have seen Vice Directors unseat Directors, or assume the duties when the Director was no longer able or willing to do so. If the "good old boys" (gender reference noted) are re-elected every two years by the members, it either indicates that no one else wants to run, or that the members are, in general, satisfied enough to re-elect the incumbent.

To fill in a few gaps with a short summary, the ARRL Section Managers manage the ARRL Field Organization of volunteers in their sections. They are unpaid volunteers, elected by direct vote of ARRL Members in their sections. They do not set ARRL policy, although they may set some local policy procedures about how they run their sections. The ARRL Field Organization is comprised of unpaid volunteers, appointed by the SM. The SM and FO comprise the local aspect of ARRL.

ARRL policy is set by the ARRL Board of Directors, elected by a direct vote of licensed ARRL members in their divisions. The Directors are all unpaid volunteers. The Directors meet three times a year. While they do like to meet in Newington at least once a year, the meetings are held at various places throughout the country, as determined by a vote of the Directors. The Directors elect the ARRL officers. These officers do not vote as the Directors set policy. The officers are all unpaid volunteers.

The HQ staff is paid, doing a good part of the work to implement the membership services and policies set by the ARRL Board.

If we assume that the FCC is peramanently out of the exam business, how could we devise an exam system that would be reasonably consistent without a question pool? I do not ask this to be argumentative, but hoping that some good ideas will come out of the ensuing discussion.

(I can do no more or less with the good ideas than you can; I work in the Lab here, so I can't be a member of the ARRL Board of Directors; we have a policy that no Director can have a finanical stake in amateur radio, so I would be disqualified.)

(But, "Director Hare ..." wouldn't that strike fear into their hearts? :-))

> >by CW operators who have no intention of ever contacting anyone on

This is nonsense. I have been licensed for 16 years and I started out on CW. I do not remember ever being intentionally jammed on CW. Now there have been times when the CW bands are so crowded that there is some QRM......That's why you have CW filters.......but this is not jamming. There are also times when the other station cannot hear you or the station you are working. I would say this is a good argument for a manditory Novice license so that newcomers can learn how to operate on HF both CW & Phone. Many new Hams don't realise there is a "B I G" difference in HF CW/SSB to UHF/VHF FM. The key to HF is learning how to use your receiver and listening. HF takes a bit of patience......If you don't have the patience to learn code you probably don't have the patience to operate HF.

My Opinion
Don, W6IQ

Win 3.1 still works for me on my 486 66mz. I don't have a reason to
change untill, of course, software for 3.1 is no longer written.

Well, you might use it during poor propagation, a CW signal is usually copyable long after SSB signals have faded into the noise.

It's also very popular on 2m and 6m when doing weak signal work. Again due to the fact that it's still copyable when other modes are not. This is also applicable to EME (Earth Moon Earth) I may be mistaken so don't flame but I think CW is almost exclusive for that mode due to weak signals.

If you have a net, it is MUCH less likely to be jammed. It's just too easy to flip on the 250hz filter and make them GO AWAY. The jamming type just can't deal with not being "heard" by all.

Hmm let's see, oh yea, you might use it to communicate with the QRP'ers who are probably one of the fastest growing groups in our hobby, Alot of them use only CW on HF and will usually provide you with a GREAT QSO.

Remember, it's all about fun. CW was outdated as soon as intercontinental telephones were available. 30's 40's? Copying CW is alot of fun. Those who never give it a chance miss out, but I guess thats the case with alot of things.

Haaaaaa haaaaaa haaaaaaa, Christ I still can't stop laughing. I love all this lawyer type language!! "documented evidence" And uh yes your Honor the prosecution has shown no documented cases of a spark gap transmitter having more emergency readyness than a Citizens Band Transceiver!. haw haw.

It was supposed to be a funny story you twit! Sheesh you are beyond help.

Your so far out in orbit AMSAT should have elements on you. Have you completly lost it? Wait a minute, what about the SGMGFETA's Spark Gap Monitors for Emergency Traffic Association, they have over 2 million members who all practice spark gap! I'm sure if you write to them they can give you tons of real situations where lives have been saved because of spark gap. Of course there are two groups, commercial

and homebrew.

The commercial group only uses commercially available spark gap transmitters (mostly Japanese but some German equipment is starting to emerge using liquid nitrogen emersed coils for high efficiency) These new spark gap transmitters are much cleaner than the originals used years ago. The homebrew group builds spark gap transmitters only from automotive parts. Some have used motorcycle parts in the past but this practice is frowned upon by the club officers.

Ah yes, and this list above of course was compliled using "documented evidence"?
I gotta get outta here I'm about to pee my pants from laughter.
A closing thought, call the cellular phone companies in the flooded cities of North Dakota, Minnesota etc. Ask them where there cell sites were a few weeks ago.

Answer - under water
Result - NO CELLULAR COMMUNICATIONS AVAILABLE

Don't take this too much to heart Kevin, I'm just having fun too.

In Finland the power limit on HF for the entry level Basic/Novice
license is 120 W and within that limit, you can use most of the rigs
on the market, since almost all are in the "100 W" range. To get up to
the General class power limit (1000 W) you are going to need an
external linear amplifier. I have heard of very few novices buying or
owning such devices, so it not a big problem over here. The important
thing is that the power difference between the classes is large enough
and that the higher limit requires an investment (external amplifier)
that is not needed or of any use at the lower class.

You expect too much from your newsgroups Kevin. There ain't no evidence for nothin' around here, 'cept for what Vince claims to provide us with, of course. Evidence is scarce as hens teeth - opinion abounds. This is not a unilateral accusation. We have beliefs, we have reason, we have personal experience, and we have logic. We draw our own conclusions based on the merit of the argument......or in some cases, not.

3532. Where did Jim go?

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-22 00:00:00 UTC
From: K0HB@usa.net
Message-ID: <864329847.30965@dejanews.com>
Source record: 197876
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Talked to a young fella on the repeater the other day who introduced himself by saying "my personal is Jim and you're my first contact". He seemed like a nice sort, delighted that he had just received his shiny new call sign, and was anxious to make some new friends. Kinda sounded like I felt when I put my new call sign on the air the first time way back when, except probably brighter, cuz Jim is one of those young computer jocks. Me, I still got problems with the LL scale on my Pickett slide rule. Yep, I think Jim sounded brighter than me, quick to catch on to things.

But I don't think Jim will be back on the repeater. Before I had a chance to really get to know much about Jim, or even wrangle an invite to lunch, another station, with an impressive "senior" call sign joined the contact, flashed his shiny Radio Cop badge, and proceeded to issue Jim a "verbal speeding ticket" for improper lingo on the radio. "Radio Cop" said the term "personal" (and for that matter "handle") were unwelcome in ham radio, and generally made my newfound friend feel like an unwashed interloper. (Gosh, I've been saying "handle" since I was a conditional class. Slow to catch on, you know.)

Now I should point out that "Radio Cop" took pains to appear very well meaning. Didn't use any bad words that I noticed, was quite polite, even seemed like he was trying to be "helpful." In other words, he thought he was doing Jim a favor by pointing out his transgression from our sacred Amateur Radio way of doing things. I think Jim felt just the same way I did back in a new school in third grade when the well meaning teacher pointed out that "we don't keep our pencil behind our ear in this room." Sure enough, I looked around and none of my new classmates had pencils behind their ears. Sure was embarrassing, and at that moment I really wished I was back with my good old buddies in second grade. Now, if I'd been allowed to hang out a couple of days, I'm sure I would have learned how to properly stow my pencil. And if Jim would have hung around a couple of days on our repeater I just bet he would have noticed that his lingo, perhaps learned in another radio service, was a bit out of place, and pretty soon Jim would sound "just like the rest of us." Like I said, he seemed pretty bright to me, quick to catch on to things.

"Radio Cop", you have kept our hobby uncorrupted. I heard Jim down around 27 Mhz this morning trying to sell his barely used 2-meter HT. I'm gonna miss my new friend Jim, because I think I could have learned something from him. Maybe you could have also.

Like I said, he seemed pretty bright to me, quick to
catch on to things. Gee, what do you think Jim caught on to?

Hi Hans, I gave out my "handle" on 27 MHz when it was still a ham band. CBers probably got a third of their lingo from 1950's hams.

At a hamfest a couple of years ago, I gave a friend a call on 2m simplex ending with, "Hey Harold, got your ears on?" One of the radio cops says, "Hey OM, we hams don't say things like that. How long have you been licensed?" I replied, "44 years", and walked away, leaving the radio cop at a complete loss for words.

>other technical activities where we used to lead and make significant

But realistically, there's not much stopping that from happening right
now. I see lots (for some small value of "lots") of folks inventing
and innovating and adapting stuff for ham radio right now. Problem
is, not all that many of the average users want to adopt and exploit
those innovations. Techies generally don't do much "normal"
operating; they prefer to tinker and innovate, then if their ideas
catch on, they move on to other things. This is part of what's
happened to packet. The experts and innovators have moved on, and the
users who are left are unable or unwilling to learn enough to keep the
system going and upgrade it. The fact is that even at 1200 baud, one
can move a lot more data than what we're doing in most areas, if only
some common sense were applied. I could write a bleeping BOOK about
this, I tell you! When lockout capabilities were added to TheNet node
software a few years ago, that was the beginning of the end of a
workable packet network in most areas.

>contributions to the SOTA ... we still can, despite protests to the
>contrary by the "I don't care how the radio works, I just want to yack
>and play games crowd" ... and we need to do public service ... we

You don't need much tech knowledge to do public service. It's more a
matter of training, practice, and cooperation.

>CANNOT justify our occupancy of our bands on the basis of competitive
>games, collecting wallpaper, and any of the several other perversions
>that have crept into the service and distorted the perception of the
>raison d'etre in the minds of far too many incumbents.

But ham radio is a *diversified* hobby, and we need to make room for
every aspect of the hobby, even if we don't care for it ourselves.
Like it or not, we need *numbers* to save our bands, and we're not
attracting new hams anywhere near fast enough to do that.

<HF/VHF+ stuff bypassed for now>

<likewise ARRL stuff>

>they can't understand that the truth is that "without the technical
>part, it's just CB with an attitude" ...

None of this is really relevant. CB is CB, Ham Radio is Ham Radio.
Each service has good and bad ops in about the same ratios. People
are people, no matter where you find them. As I said, as long as the
ARS retains the privilege of experimentation, building, innovation,
and the other traditional stuff, I really don't see any harm in
allowing the hobby to move in the direction of a Personal Radio
Service. The fact is that it's been moving in that direction at least
since the deregulation of the '80s, and it hasn't harmed the hobby at
all, as far as I can see. It's *changed* it, yes, but change is
something we have to face. This is the end of the Twentieth Century,
after all.

>> Face it, you're never going to increase the percentage of "techie"

>care to beep to some sort of "lesser" status, despite their demonstrable
>technical abilities and they will come in larger numbers ...

The No-Code Tech has, IMO, already attracted about all the techie types we're going to get. Eliminate CW entirely, and you'll get a few more, but not enough to change the ratio of techies to Appliance Ops. In fact, I'd guess that you'd get far more App Ops than Techies with such a change.

>> PinGGGG!! There goes the old Irony Meter again. I've gotta get a

>countries.

good guess. I suppose this will happen. that's why i don't take CW
test now. it's a waste of time. it will happen. it may not be
in 1999, but it will eventually. 10 years later? maybe.

Also, some of ham bands will be allocated to personal and commercial
activities... it will happen you know... it's already happening for
220 MHz bands.

Yes, but if the professor had figured out how to make a spark gap transmitter on Gilligan's Island, he could have saved them all 15 years of isolation.

If so many people thought Morse had so much value, far more would USE
it ... less than 40% of code-tested HF hams EVER do ... far fewer use it
as their primary mode.

Thus, for over 60% of code-tested, HF hams, learning Morse was just a
stupid exercise in self-torture that had to be endured to obtain a license
to do something totally unrelated.

That, pal, is STUPID and has NO place in government licensing.

I'm looking for a matched pair of Motorola Micor or Mocom-70 radios, both with working transmitters and receivers. I'm looking to replace the existing equipment in my club's repeater with some higher-powered equipment that would provide us with both security and redundancy.

Please email me if you have any radios to sell. We're looking to extend the coverage of our current VHF repeater, so our main interest is in radios with > 50 watts output power.

Thanks!

QST de W1AW
Propagation Forecast Bulletin 21 ARLP021
From Tad Cook, KT7H
Seattle, WA May 23, 1997
To all radio amateurs

SB PROP ARL ARLP021
ARLP021 Propagation de KT7H

At last there is a bit of solar activity to report. There was a big geomagnetic upset at the start of the period, with a planetary A index of 53 on May 15. This indicates highly disturbed conditions, where absorption rather than reflection of radio waves is the rule, particularly over polar paths. It was caused by a parallel ribbon solar flare on May 13, and the resulting solar wind had a big effect.

Solar flux rose over this week, and peaked at 84.8 on Wednesday. This week was the first time in awhile that the daily flux has risen above the 90 day average of 74.

W4VOS sent a nice letter regarding the recent lack of activity. He mentioned the news item from propagation bulletin ARLP003 in January which talked about an American Astronomical Society meeting in Toronto, where scientists from Yale and NASA said that this next solar cycle should show a decrease in overall activity compared to previous cycles.

He also noted in his letter that after the last solar minimum in 1986, activity jumped right back, and there was no question that the new cycle was on a roll. This time there is a much longer period of low activity between cycles.

Currently there is wide disagreement between experts on when higher activity will resume, and by how much. As an example, NOAA and the National Geophysical Data Center's estimates for the sunspot count for June vary by four to one.

20 meters remains the best band for worldwide propagation during daylight hours.

Sunspot Numbers for May 15 through 21 were 15, 27, 47, 32, 51, 57
and 79 with a mean of 44. 10.7 cm flux was 73, 72.2, 72.8, 74.1,
74.2, 79.1 and 84.8, with a mean of 75.7, and estimated planetary A
indices were 53, 12, 12, 6, 4, 6, and 5, with a mean of 14.

If you have a 10 meter transmitter that is putting out a 5th harmonic,
(which is the one that would fall in the 2 meter range) that is strong
enough to key a distant repeater, you have a 10 meter rig with a real
problem.

Dave,

Although I use WIN95 and NT, both 3.51 and 4.0 at work, I am very
comfortable with my 3.11 on my home computer and the kids use 3.1 on
their computer. I think it would be quite unfair to the ham community if
you were to limit your potential customer audience by producing **ONLY**
a 32-bit product.

thanks,

>> It's good to optically isolate the transmitter from the PC ports, it
>> keeps stray RF out of your computer.

If the computer is connected to a grounded outlet, isolating it from
the rig also eliminates ground loops, which is important, since the
protection ground in the outlet can be in a slightly different
potential than your antenna grounding and this could cause hum due to
the circulating current.

>
>Hi Glen, how would you accomplish the isolation with a TNC?
>
>73, Cecil, W6RCA, OOTC

How about powering the TNC with a separate power supply and using
isolation transformers in the loudspeaker and microphone lines and use
an opto isolator (or relay) to drive the PTT line of your rig.

IMO, it easier to put the isolation between the rig and TNC (using
transformers) than between the computer and TNC, since you would have
to convert the RS-232 signal to current loop to drive opto-isolators
and then convert the signal back to RS-232.

>

But I believe that Pladsen has missed the original point. The government's doesn't care whether we communicate with other stations across the street or the other side of the world. That being the case, it is not their concern that we have the tools to do so. In as much as many would be appalled at the notion that they would, by government regulation, have to equip their stations so that they are capable of communicating in all modes and methods of communciations (i.e. multi-mode controllers, satellite, EME, etc.) What is amazing is that amateurs have not demanded that their usage of the Morse code be viewed in the same manner as any other mode - Morse code testing is irrelevant to determining an individual's competency to operate an amateur station. As a result, an individual will be allowed to make a personal decision as to whether it is worth expending the time and resources to acquire that skill. If lack of that skill impinges upon the individual's ability to contact other countries, that is no concern of the government's.

After recognizing Pladsen callsign from Belize (and I believe I have worked him a number of times, both in and out of contests), I am sorry to see that he is so definitive in his belief that Morse code is the only means of working other countries. Considering that I have confirmed over 260 countries digitally, I suspect that his "country count" is in the same range as mine. Such mutual experiences would belie his notion that Morse code is the only affordable technology. Moreover, considering the advances in the SOTA, the installation of digital technology is becoming more and more affordable as time goes on.

> VHF Packet sure won't do it..

John:

What are you talking about?
Go back and read the thread. The question proposed was:

"OK here is the real question on learning code. HOW AND WHY WILL I EVER
USE IT?"

It had nothing to do with demonstrating proficiency or passing a CW
exam.
Or your right to use or not use it. Because someone supports the use of
CW does not imply that the support the testing or requirement of it.
Take a pill dude.

Hi Everybody, this is Fabrizio IK4VYX.

The latest release of DXTelnet (2.1) is ready and can
be downloaded from WD4NGB's nice web page:

http://home.sprynet.com/sprynet/wd4ngb

As you're there, you can sign on Bruce's guest book and
find many interesting ham related links.

For a complete list of all the features (new and old ones), please
see the above URL.

What's new in DXTelnet 2.1

3 programs in one:
DXTelnet: for telnet connections
DX-TNC: for packet radio connections
DX-Plorer: for connections to OH2BUA's Web Cluster.
The 3 programs can be run simultaneously and the info are
collected and displayed in each DX-Spot window, without
duplications.

Scripts:
DXTelnet and DX-TNC have a per site script facility which allows
automatic connection/reconnection both to Internet clusters and
to packet radio ones.
DX-Plorer performs automatic periodic connections to the Web cluster.
You can, of course, manually refresh data or submit your spots to the
Web.
To submit a spot to the web, you simply have to type the DX-frequency
and the DX-call (not also your call).

A new "talk to" function has been added:
If somebody sends you a talk, you can answer him by simply pressing
the F12 key.
Example: if you get a talk from WD4NGB-5, by pressing F12, the
program types "T WD4NGB-5 " automatically; this means 11 keystrokes
reduced to one!

Conference servers support:
Choose the Hydra site and talk with many hams, all over the world,
about many topics, on more than 30.000 channels

Text Print:
Now it is possible to print the text from any window, in one shot.

Long lines are automatically wrapped to fit the page (not truncated).

Spot Bridge (for Cluster SYSOPs only):
DX spots can be bridged between two Internet Clusters or between
an Internet and a radio packet Cluster.
This feature is not normally available cause dangerous: it requires
a special SYSOP password.

Better scroll and display:
Verticall scroll bars can now be added to better the scroll.
The font, which caused problems in version 1.0, can now be selected
and sized.

Tip of the day:
A neat solution which is immediately available with DX-Telnet 2.1,
is the DX Voice Server: by connecting the Sound Blaster output of
your PC to the Mic Input of any FM radio with a VOX, you can get
a DX-Spot Voice Broadcaster: useful for your locals who have not a
TNC and packet, or are moving aronud in their cars.

For further info you can contact me via email (vmi@vmi.it)
or via packet BBS mail (IK4VYX@I4UJB.IEMR.ITA.EU)
or also send me a talk on the US Packet Cluster Network.

Best 73 de Fabrizio (IK4VYX)

Why does every one pick on the phone section of 75 to make their point.
If you knew CW and listened on from 3.5 - 3.7 you would find a

completely different attitude. It's why I like CW.

3565. Re: SPARK GAP emergencies!!

You are driving along and somehow your car runs off the road and down
a hill. You are hurt and can't make it back up to the road. Using
your ham radio knowledge, you quickly build a spark gap transmitter
from the car's ignition system. You send out a detailed distress
message in Morse code by touching two wires together. Help quickly
arrives and you are saved.
Now that's interesting. How does one rig up a spark gap transmitter
from a car iginition?

If the gas tank is leaking, finding the person in distress should be
no problem, especially at night.

But what happens if this ham guy cann't find his bifocals to build the
spark thing. Oh, I guess he may be able to whistle the code with all
the hot air he stored up.

--

This is one of the strangest posts I've seen in a while. In my brief 19
years of operating CW I can count on one hand the number of intentional
times I've been jammed or interfeared with by another CW operator.
Unless he EXACTLY zero beats the signal I'm copying he has a fat chance
of getting through my 250hz filter.

Don't recall mentioning anything about "no-coder" or "can't or won't beep". Can't remember mentioning Jim's license class at all. Just like magic, this turns into another "beepers vs. non-beepers" thread?

3572. Morse Code Software Decoders

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-23 00:00:00 UTC
From: James Sawle <james_sawle@dial.pipex.com>
Message-ID: <3385B256.7654@dial.pipex.com>
Source record: 197756

I am having a problem with a unit that I brought from Walters and Stanton in the UK that they say will decode MORSE, PACKET, AMTOR and RTTY.

I purchased the unit for use as a morse code decoder so that I can try and get a friend of mine intrested in doing his amateur license , he has resently lost his wife to cancer, so I am trying to get his mind on to something that will help him through this bad time.

He has always wanted to do his morse test, but up until now has has no means to achieve it.

I have brought him a HF transceiver, and this interface from W&S but the software that came with it for the morse only sends and does not receive, what I am looking for is software that will send and receive morse via a PC, more importantly is to decode morse on receive.

Please can anybody help

All the best

James

Phonetic Alphabets (Alpha Bravo etc)
May 1997

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic/radio/
spelling/telephone alphabets, and the term analogy alphabet
is also used. This collection currently includes alphabets
for the following languages:

English, French, German, Dutch, Flemish, Spanish,
Portuguese, Italian, Romansh, Danish, Norwegian,
Swedish, Finnish, Czech, Slovak, Polish, Hungarian,
Croatian, Serbo-Croat, Romanian, Turkish, Hebrew,
Russian, Swahili, Kwanyama, Ndonga, Afrikaans,
Chinese and Esperanto.

This posting supersedes the one of 21 March 1997. There are
two new alphabets: one Greek and one Turkish.

I have agreed to take over maintenance of this collection
from Brian Kelk. Any comments or suggested changes may be
sent to me at <gwil@mindspring.com>.

Thanks are due to Mr. Kelk and to the many contributors,
not all of whom are acknowledged below.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest, and where a document of this length is acceptable;
in the case of Web pages I ask that care be taken, as it is
easy to mangle something.

There is a brief version of this collection. I don't intend
to post it to the newsgroups unless I get requests for it.
Both the full and brief versions may be found on the World
Wide Web at:

<http://www.mindspring.com/~gwil/phon.menu.html>

The full version is at a number of other sites, including:

<http://www.columbia.edu/~fuat/cuarc/phonetic.html>

You could also try:

<ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/phonetic-alph/full>
<ftp://ftp.cs.ruu.nl/pub/NEWS.ANSWERS/radio/phonetic-alph/full>

Editorial comments are in square brackets.

***** ENGLISH *****

The NATO phonetic alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[This alphabet dates from about 1955 and is approved by the
International Civil Aviation Organization, the FAA and the
International Telecommunication Union; note that different
bodies prefer different spellings, so one also
sees: Alfa Juliett Juliette Oskar Viktor]

[The alphabet above is from the Cambridge Encyclopedia of
Language. An alphabet with Alfa X-ray can be found in The
U.S. Department of Defense Dictionary of Military Terms.
Alfa Juliett X-ray, which is the ICAO version, appears in
A Concise Dictionary Of Slang And Unconventional English
and also a Langenscheidt dictionary]

[UK police use Indigo(???) instead of India.
German army handbook 90/91: Alfa Foxtrott Juliett.
Italian version: Alfa Charly FoxTrot Giuliet Romio Wiskey.
An Indonesian phrase book: Beta Ultra Volvo Whisky X-ray.
A precursor of the present alphabet (1952?) had: Alfa Coca
Metro Nectar Siera Union Whisky Extra]

Phonetics for digits (from an amateur radio FAQ):

zero one two tree fower fife six seven eight niner

From the Cambridge Encyclopedia of Language:

zero wun too tree fower fife six seven ait niner

'Telecom B':

[Note similarity to Apples Butter Charlie]

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found also in Swedish, Dutch, Hungarian telephone directories. An 'analogy alphabet' in a Kenyan directory has Charlie and no Y. A Swiss directory: Andrew Charlie Lussy Queenie Sugar. French/German vocabulary books: Andrew Charlie Lucy Mike Nelly Sugar Xmas. English phrase books for Spanish/Italian speakers: Charlie. A 'British English' alphabet in a Langenscheidt dictionary: Andrew Charlie Lucy Queenie Sugar Xmas]

[Used as an English alphabet by telephone operators in Israel]

'British A':

Amsterdam Baltimore Casablanca Denmark Edison Florida Gallipoli Havana Italia Jerusalem Kilogramme Liverpool Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory has: Danemark. A 'French' alphabet in a Hungarian directory has: Cassablanka Danemark Que'bec Upsala Zu"rich.
An 'international' alphabet in a business book for French has: Italy Kilogram Zu"rich; the corresponding book for German has: Italy Kilogram Xanthippe Zu"rich.
An 'international' alphabet in a Langenscheidt dictionary: Danemark Madagaskar Que'bec Upsala Xanthippe Zu"rich]

[West Berlin telephone directory 1965: Danemark Je'rusalem Madagaskar Que'bec Upsala Xanthippe Zu"rich.
Santa Fe (Argentina) 1955: Dinamarca Habana Jerusale'n Kilogramo Nueva_York N~andubay Upsala Wa'shington Xantipo Yokoama.
Azores 1966: Danemark Ita'lia Jerusale'm New-York Que'bec Upsala Yokoham]

[Used as a French alphabet by telephone operators in Israel]

Bombay telephone directory 1962 (also a later source):

Army Brother Cinema Doctor English Father Gold Hotel India Jam King Lady Mother Navy Orange Paper Queen Raja Sister Table Uncle Victory Water X-ray Yellow Zero

Kenyan and Tanzanian telephone directories 1966:

Africa Bombay Charlie Durban England Freddie George Harry India Japan Kenya London Mombasa Nairobi Orange Peter Queen Robert Sugar Tanga Uganda Victory William X-Ray Yellow Zanzibar

Johannesburg telephone directory 1965:

[Note similarity to Alfred Benjamin]

Arthur Betty Charlie David Edward Frederick George Harry
Isaac Jane Kate Lucy Mary Nellie Olive Peter Queen Robert
Simon Thomas Union Violet William X-Ray York Zero

Malayan telephone directory 1964:

Australia Bombay China Denmark England Fiji Ghana Hongkong
India Japan Kedah London Malacca Norway Osaka Penang
Queensland Russia Singapore Turkey Uganda Victoria Wales
X'Ray Yokohama Zanzibar

Used by police in New York City:

[Note similarity to ARRL and Western Union]

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Alternative phonetics sometimes used unofficially in amateur
radio:

America Boston Canada Denmark England France Germany
Honolulu Japan Kilowatt London Mexico Norway Ontario/Ocean
Pacific Radio Santiago/Spain Tokyo United Victoria
Washington Yokohama Zanzibar

[Also: Amsterdam, Baltimore, Brazil, Chile, Egypt, Finland,
Geneva, Greece, Guatemala, Hawaii, Italy, Kentucky, King,
Luxembourg, Montreal, Nicaragua, Portugal, Romania, Russia,
Sweden, Texas, Uruguay, Venezuela]

The ARRL (American Radio Relay League) alphabet (1948):

[Note similarity to Western Union and Able Baker]

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO/ITU alphabet]

Pre-1954 U.S. Navy Radio Alphabet:

(Communications Handbook, 1945)

[Note similarity to Able Buy Cast]

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

[formerly used by IBM engineers for hex digits and pin
positions]

"Used by Armed services of USA & GB" (ARRL Handbook, 1945)

Able Baker ... Easy ... Tare ...

Allied Services 1945:

Able Baker ... Edward ... Tape ...

From a book entitled "The Complete Morse Instructor..." (1944):

Able Baker ... Easy ... Tare ...

RAF 1943-56:

Able-Afirm ... Item/Interrogatory ... Jig/Johnny ...
Nab/Negat ... Peter/Prep ...

[In similar alphabets: affirm, cast, hypo, inter, negat,
option, over, prep]

RAF 1942-43:

Apple Beer Charlie Dog Edward Freddy George Harry In
Jug/Johnny King Love Mother Nuts Orange Peter Queen
Roger/Robert Suga Tommy Uncle Vic William X-ray Yoke/Yorker
Zebra

[cf. aircraft in Dambusters raid: A-Apple B-Baker C-Charlie
E-Easy F-Freddie G-George H-Harry J-Johnny K-King L-Leather
(officially L-London) M-Mother N-Nuts O-Orange P-Popsie
S-Sugar T-Tommy W-Willie Y-York Z-Zebra]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar

From: Bro Bill <webmaster@cahaba.com>
Message-ID: <3385D2CE.211@cahaba.com>
Source record: 197760

The Web Explorer has been privileged to host Pike & Fisher's complete FCC Part 97 Rules & Regulations of the Amateur Service for the past 2 years. NPRMs (Notice of Proposed Rule Making) effecting Amateur Radio are posted here as well.

May additions/changes include:

97.3(a)(11)(iii) Special event call sign system
97.5(b)(2) is revised A club station license
97.119 is revised Station identification
97.509(a) and (i) are revised Administering VE requirements
97.513 is added VE session manager requirements.
97.519(b) is revised VE responsibilities

There was one NPRM relating to Amateur Radio this month.

Docket No. 97-113 FCC 97-113 Released April 7, 1997
Electronic Filing of Documents In Rulemaking Proceedings

well, if the propagation doesn't support SSB, it probably only
marginally supports
CW (the radio signal doesn't know how it's being modulated.)

> If you have a net, it is MUCH less likely to be jammed. It's just too
> easy to flip on the 250hz filter and make them GO AWAY. The jamming type

a good jammer will be zero-beat to you so to confound the other
stations.

> Hmm let's see, oh yea, you might use it to communicate with the QRP'ers
> who are probably one of the fastest growing groups in our hobby, Alot of

no reason you can't do QRP any other mode.

3579. QRZ Callsign Database Removed License Expiration Data

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-23 00:00:00 UTC
From: bohnovic@worldnet.att.net
Message-ID: <3385fd75.1339288@netnews.worldnet.att.net>
Source record: 197763

It appears that the QRZ CALLSIGN DATABSE on the WEB removed the
license expiration data. I just checked one of my buddies callsign and
discovered that the expiration data was missing. I then checked my own
call and it was missing from there too.

I wonder if the FCC removed it from the data base they have at their
FTP site. They are probably getting ready to charge for that data.

Check it out at: http://www.qrz.com/cgi-bin/webcall

The argument will continue until the actual elimination
of testing happens. As one opposed to CW testing, I believe
it must continue to be voiced as long as the pro-code test advocates
continue their efforts to oppose any change.

The discussion/debate, however, does more
appropriately belong in rec.radio.amateur.policy.

They have a web site
http://www.m2inc.com/
The eggbeaters cost around $120 each.
M2 (which is actually M squared) claims these antennae
have 1 db of gain, I don't know whether that is dbi or dbd.

I am also looking into a company that sells quadrifilar helicals
for 2m and 70cm, but they are over $300 a piece (Ouch!)
I am hoping they have significant gain over a dipole...
http://ic.mankato.mn.us/~sds
Their web site doesn't mention ham bands, but I have received
email from them saying that they do sell them, and they are
in the process of updating their pages.

I checked the FCC database and the expiration data is still there. I
sent an e_mail message flloyd at QRZ asking what happened to the
expiration data. I hope it is just an error and that it will appear in
the future.

I suspect that many of the non-ham things we all enjoy in life are not found in other parts of the CFR code, either. I haven't read every word of every law, but I suspect that there are no laws codifying the smelling of flowers, my quiet enjoyment of a sunny, summer day, or quiet contemplation of the meaning of Life, the Universe and Everything. Yet few would argue that these are all fine things, indeed.

Perhaps I take a more Libertarian view than you; I believe that those things not prohibited to us by law are all fine things, indeed, not that the law tells us what things we are allowed to do.

I've just finished (or am at a stopping point) with my Yagi
(javascript-based) design page. You're welcome to visit:

http://www.redshift.com/~orrin/javascript/yagiscr.html

Please report any bugs you encounter. Javascript does seem to
be a bug-prone language to program in, in contrast to Java.
The yagi page looks best with the Microsoft Internet Explorer
version 3, but Netscape 3 does okay too.

The program outputs dimensions (in cm) for building the antenna, as well
as XYZ coordinates (in mm) for plugging into EZNEC. The output is
printable, unlike the output of my Rhombic design page
http://www.redshift.com/~orrin/java/RhombicApplet.html

^^^^^^^^^^

You reasons for being a ham may be because you find it a "hobby".
But that doesn't mean that *anything* you find to be "fun" is
an acceptable part of ham radio (as your last line very strongly
implies). If someone gets their jollies by running a 10KW signal
to jam legitimate transmissions, that may be "fun" to them, but it
is clearly outside of what is permitted in part 97. Either part 97
has meaning and we find our "fun" and "hobby" in what is approved,
or at least authorized, in part 97, or else we are no different
than what hams stereotypically denigrate in CB'ers.

Ed ... I was talking about what the regulators clearly envisioned and
codified when they wrote the purpose for ham radio ... and what they
clearly expected to get in return for the public for the privelege of using
at least several billion dollars worth of spectrum ... (BTW, I lean towards
the Libertarian side myself, but can't condone perversion and waste of
public resources on that basis ...)

Yes, I disagree with a lot of the perversions of our service that have
occurred in the past several decades, from "Incentive (to copy faster
and faster code tests) Licensing" to the explosion of contesting, to
the inane practice of "what's your 10-10 number?" (it really surprises
me that THAT phrase isn't "what's your 10-10 number good buddy?")
and other similar practices that waste valuable spectrum ...

Hello All,

I am looking for an older UHF radio that I can use for an autopatch I am trying to throw together. It dosen't need to be fancy, and could even be on "the rocks". I can't throw a lot of money into this, so hence I am looking for older equipment. Any help would be great!

Thanks,
Adam / kc7ljq@hotmail.com

No, it isn't. It's just that the jerks tend to stand out, so we
notice them more than the much larger majority of hams who are pretty
good folks.

>he'd have more fun with his old friends on 11-meters. He also realizes

>company included.

That is a massive cop-out. There's far more to ham radio than two
meters and 75 meters. If you don't like the folks on one repeater,
move to another one, or try the 220 band, where folks are generally a
lot less uptight. Better yet, start your own repeater. Or talk
simplex. Or get on packet. Or whatever.

Anybody who's as easily intimidated as our mythical "Jim" probably
won't have much fun on Ham Radio, anyway, so it's small loss to the
hobby if he goes off into some other hobby.

I guess they will do the same thing with the Internet addresses that
they do with the telephone number they ask for. (Maybe the Internet
addresses make them look like they use the latest in technology to
communicate with vanity callsign applicants.)

I have no ham-radio software that runs under Windows! All my contest
logging, database, propagation forecasting, VHF packet and HF digital
software is for DOS. But I do use Win3.1 for internet access.. My PC
is quite capable of running Win95, but I see no reason to change at this
time.. Most of my ham friends use similar software, and have not changed
to Win95.

Yup ... sounds like a "real warm, friendly welcome" to me ...

>
> Now I should point out that "Radio Cop" took pains to appear very well
> meaning.

Right ... SURE he did ... some have that pseudo-subtle way ...

> Didn't use any bad words that I noticed, was quite polite, even
> seemed like he was trying to be "helpful."

Well that makes him better than most in that respect ... it is
slightly better than simply muttering something like "oh, great,
another f___ing no-coder" like quite a few do ...

> In other words, he thought he
> was doing Jim a favor by pointing out his transgression from our sacred
> Amateur Radio way of doing things.

I don't buy that ... even the densest beeper or olde farte is (at least
part) human and has to know that nobody likes to be treated like that ...
I really believe that most of them do that crap deliberately to drive the
newcomers off ...

[snipped the part about how Hans was once embarrassed and
felt bad about it, too]

> "Radio Cop", you have kept our hobby uncorrupted. I heard Jim
> down around 27 Mhz this morning trying to sell his barely used
> 2-meter HT.

After the reception he got, can you really blame him ???

> I'm gonna miss my new friend Jim, because I think
> I could have learned something from him.

Maybe you could have Hans ... maybe most could have ...

> Maybe you could have also. (refering to "Radio Cop") ...
I doubt it ... "Radio Cop" sounds like the kind of jerk who's
been keeping good people out of ham radio and driving away
the newcomers for years ...

> Like I said, he seemed pretty bright to me, quick to
> catch on to things. Gee, what do you think Jim caught on to?

He caught onto the fact that many, many hams look down their
noses at those who can't or won't beep no matter what their other
capabilities might be ...

If you live near a large city, see if there is a Batteries Plus store there.
They sell a charger that puts out 2A max, and drops back to only a few MA when
the battery is charged.. It has LED's showing the charging status, and sells
for about $20, a lot cheaper than the ones advertised in the ham magazines,
and does the same thing.. I use one to keep my deep-cycle batteries topped off
between camping trips.

Right you are, Don. I can copy through any CW QRM w/o any problem.
But just can't stand it when over modulated SSB sig. splattering all
over the band. Greater challenge is copying very weak CW signal. You
almost have to feel it instead of hearing it.

Hello Tony.. I would recommend LOGic-4 by Dennis WN4AZY for everyday logging and also for contesting. It is based on FoxPro, and if you buy the Windows version you also get the DOS software with it. It comes with contest setups for 50 contests. It can be interfaced to any HF rig that has capabilities for computer control, and can key the rig on CW via the LPT port. Here is the web site for more info and a demo copy of the software:

http://www.hosenose.com/~pda

If you just want software for hardcore contesting, I'd get 'CT'. I use it for CW contests, and then export the database file to LOGic-4 later. Both programs have utilities to import and export their database files to other programs. CT is great for the contests it supports, but doesn't cover as many as LOGic can (you can make your own contest setups for LOGic). You can find info on buying CT in most issues of CQ magazine.

[snip]
Mike, I agree. Lets face it folks, society has been lowering its standards on everything from school testing to presidential morality. Amateur Radio could only be degraded by the same process. Dont let a handfull of squeeky wheels drive amateur radio into the ditch. We have incentive licensing in place to create a system to reward the hard workers. Perhaps the incentive licensing details need to be changed slightly, but we certainly need the incentive system. Twenty word per minute may seem like a lot, but believe me it is only a starting point. In my opinion, code contests are by far the most exciting operating. Here, one needs to be fairly proficient at code to be able to be in the thick of things. I know many code ops (myself included) who perform at faster QSO rates on code than on voice. Code is not the bad thing so many of you have made it out to be. And as far as losing interest in code, just give a listen during a code contest (such as WPX) with your narrow filters on, and I bet you count far more ops on code than you do voice. Code is good! My utmost congrats to you, Mike on your achievement. YOU SHOULD BE PROUD!!!

I don't "look down on those who beep" ... I "look down on
those whose ONLY claim to fame is beeping because they
have allowed themselves to become almost hopelessly
behind the times and technically inept."

Ham radio is *supposed* to be technical ... that's not
even open for debate, it's codified in Part 97.1 ... it's
also supposed to be about public service communications.
NOWHERE in Part 97 will you find anything about "chasing
DX, contesting, other games, collecting "10-10 numbers",
collecting wallpaper, etc.

It's been a couple of years since I had the DJ-580 but I *think* it
had a crossband repeater type mode, ... perhaps you've got it where
it xmits on 440 and receives on 2 meters ???? You might try reading
the manual *very* carefully and see if that isn't the case , otherwise
a reset will return everything to the default condition.

Oh, yes, it *is* open for debate. You can interpret 97.1 any way you
wish, but the plain fact is that Ham Radio is a HOBBY. People do it
for FUN. That's the fact of the matter. Of course, some folks get
fun out of inventing stuff or directing traffic at parades, or passing
inane messages on the CW traffic nets, but it's all a part of ham
radio, and no more or less valid than whatever it is that you or I
like to do.

>I really believe that most of them do that crap deliberately to drive the
>newcomers off ...

Absolutely. Happens all the time down here in Florida, especially in the retirement communities. These old toads move down here and then realize the deed restrictions in their new subdivision prohibit them from erecting outside antennas so they can talk to their beeper buddies on 75m. So they end up on 2/440 (which they really don't like anyway since most of them believe that "real hams" don't operate there.) They will then purposely run off as many younger, newer hams as possible in an attempt to take control of the repeater so that they can monopolize it for endless discussions about their health problems, their experiences in World War II, or how much better things were back in New York/Pennsylvania/Conneticut/New Jersey.

I have to aggree with Kevin.

Here's a challenge to anyone who really wants to prove that this might work:

One day, drive out of town with a ready-made spark gap transmitter made from bits and pieces that one would find in a car wreck, and start transmitting any kind of call. You'll never get a reply.

Ham radio is a wonderfull hobby, and an extremely useful service, but please don't let's delude ourselves.

Marc ZS6HZ.

Anybody has (or knows where I can get) EBP-10NA (7,2V/700 mAh) battery for old but still operating Alinco DJ-162TD, for sale? It doesn't have to be EBP-10NA, just any matching to above mentioned handheld which is 'compatible' with even older model DJ-160.

I would prefer new ones, however, used and in 'good shape' are also most welcome, as well as other accessories You may have for it.

Thank You very much in advance!

"Fostering international goodwill" does not necessarily equate
to the common notion of "chasing DX" ... a pursuit which has
in many cases given US ops a black eye as being rude and
inconsiderate ... the competitive games aspect assigned to
"DXing" by many US hams and the pileups and associated
bad behavior that go hand and hand with that competition are
distasteful to many foreign ops that I've met and spoken with.

Additionally, or Hispanic brethern to the south take a dim view
of the intentional QRM and "greaseball" and "beaner" comments
that Spanish-speaking QSOs often encounter ... not to mention
the fact that lots of beepers up here think nothing of ploping
themselves down right in the middle of a Spanish-language QSO
that happens to be below the US voice band (in "our CW band"),
despite the fact that in their part of the world no such inane sub-band
segregation exists ... many of them in fact choose to carry on their
conversations down there where they don't end up being the victims of
a pile-up of rude, inconsiderate, QSL-seeking gringos ...

I'm looking for a CB aerial to mount on my Nissan Pathfinder. The local
installer recommends a $140 Antenna Specialist antenna.
Obviously, since the aerial is the most important part I want to get the
best, but I don't want some huge aerial sticking high up on my car.
What can you suggest?
Peter

>signal? or will it be distorted?

There are likely to be other low-level spurious signals generated by the rig. Some of them may be close to the harmonic you're trying to amplify, so you'll amplify them also, even if you use a bandpass filter ahead of the amplifier.

The frequency deviation of the 5th harmonic signal will be 5 times the deviation of the original signal. So if the original deviation is correct, the deviation of the harmonic will be much too large. Also, sidebands caused by noise, hum, etc. will be 5 times as wide. Frequency stability will be 5 times poorer.

Well, you can use a Maxim MAX-252 IC to completely isolate the whole TNC between it and the PC serial port. I've modified an old CP-1 T.U. by adding a MAX-252 to provide complete isolation between my laptop and the radio/T.U., which are common.. It handles four serial lines, two into the serial port and two out of it (FSK/CW and PTT out, RCV Data in)..

If you want to keep the TNC and PC common and isolate the TNC from the radio, I guess you would have to use a PNP transistor and a source of 5 or 12vdc (maybe from the TNC) to invert the TNC key output (normally low on xmit).. I never thought about it before, since the circuit I use is meant to be used with software that keys directly from the PC for contesting (like 'CT' and LOGic-4).. I never heard of using a TNC for that, although I guess they can be used for CW sending..

I use RTTY T.U.'s and PC software for all my HF digital-mode operating instead of a TNC, so never really considered isolating a TNC from the radio.. The MAX-252 would work well for that, but it's too expensive (about $50) for just the CW key line!

I corrected (politely) a new ham one time for using "personal." He
had no problem with it. We became good friends, and he became an
excellent operator, who went on to become an EE. There's no need to
be condescending when advising new hams on accepted procedure.

> >return on investment that the regulators envisioned when they allowed
> >us to control vast reaches of valuable spectrum ...
>
> Almost all of those "visions" are no longer valid.

No ... that's not true ... the purpose of ham radio as originally
laid out is still valid ... and needs to be restored and preserved.

> Perhaps they need
> to be changed. Until and unless they are, we need to interpret them
> liberally,

The "liberal" interpretation has resulted in the perversion of ham
radio into an electronic paintball wars palace ...

> >We're NOT just talking about removing the code test, but of restructuring
> >the entire license system to eliminate the code-based caste system
> >and to assure that even the entry level folks have a reasonable level

> All you're doing is removing one barrier, and replacing it with
> another barrier that's more to YOUR liking. It ain't gonna work.

No, that's NOT what we're talking about doing ... the intent is not
to "erect barriers" but rather to "re-emphasize the real purpose of
ham radio" and to assure its survival into the coming century ...

Hi

I might comment that any of the above mentioned antennas can be built for a fraction of the cost of the commercially produced ones. I think if you investigate some of the ham magazine archives you'll find an eggbeater project for around $10.00. Yes it is not quite as good but you can build several $10.00 ones for that $120.00. Also you will feel a sense of pride of ownership that no store bought one can provide. Just think of that first sat contact you'll make and all you'll have to talk about [I can't believe it! I'm talking to you thru a satellite on an antenna that I made for $10.00]. If nothing else try it and if it doesn't work go buy one and prove me wrong.

Hi Glen, objectively speaking, exactly what is wrong with "my personal is Cecil" if everyone understands what it means? You remind me of the people who say FOREIGN languages should not be allowed to be spoken in the United States while forgetting we are communicating in a FOREIGN language right now. Who died and made you the ham God? People like you turn my stomach. Until the day I die, I will continue to yank the chains of Nazis like you. Force your will on unsuspecting victims as you will to try to get your self-esteem above zero. It doesn't work with people like me. If I had been the guy in your tale, above, I would have told you to go to hell and not come back! Becoming your friend demonstrated an extremely low IQ.

That's an opinion, and there's really no way to document it. My
opinion is that most of the techies have already become hams. It
can't really GET much easier without eliminating the tests completely.

>The problem is that the "average user" is too technically deficient to
>be able to recognize the advantages of the neat new stuff or is so
>stuck in the past that he's unwilling to accept it even if it's benefits
>are clearly demonstrated ...

Make it attractive, affordable, and add a few bells and whistles, and
the average ham will eat it up. Tons of hams got into packet just
because it was "the thing to do" when TNC's got affordable.

>> Techies generally don't do much "normal"
>> operating; they prefer to tinker and innovate, then if their ideas
>> catch on, they move on to other things.
>
>I disagree in several respects ... first your implied assumption about what
>constitutes "normal operating" ... I get a picture of contesters, DXers, and
>a lot of inane gaming ... that's a perversion of our service, not what should
>be "normal operating."

That's your opinion, and it's worth what you paid for it. I have
plenty of empirical evidence of techies and innovators moving on once
they get a system up and running. Most such types need a challenge to
hold their interest, and are not interested in handholding newbies in
operating and maintaining the stuff.

>Additionally ... the "tinker and innovate, them move on" is a bit inaccurate.

Not really. Folks like Hank, who stick around to improve and support
their "inventions" are pretty rare, in my experience.

>Again, I disagree ... I don't see any room to blame "the experts and
>innovators"

I didn't blame them, I explained the phenomenon.

>for the dismal state of packet radio ... nor do I agree that they've "moved on"
>(implying that they've abandoned something or someone) ... the users "who are
>left" never were willing to learn enough to keep the system going and upgrade
>it ...
>they never had anything to do with it's availability in the first place ... all
>they did
>was buy a stupid TNC and expect that someone else would spend all the time,
>effort, and money to make wonderful services available to them ...

That's just a re-statement of what I said.

<more of the same>

>done all the work (people like Phil Karn and many others at TAPR, GRAPES, and
>other groups at the forefront) haven't said "screw you selfish, ignorant
>bastards" quite
>directly and publicly ... the selfish, ignorant bastards certainly deserve it

Most hams have never heard of those people or groups. I finally
figured out that I don't need the monetary support of users to enjoy
putting up repeaters and packet nodes. I do it for the enjoyment of
learning and accomplishment, and the satisfaction of providing fun for
other hams. If those people don't enjoy what they're doing, they
should stop doing it. Blaming "selfish, ignorant bastards" for not
supporting them is a major copout. Perhaps if they mingled with all
those selfish ignorant bastards and made themselves and their
knowledge available in and understandable and non-condescending
manner, they'd get a lot more support. Insulting potential
"customers" is NEVER a good marketing plan.

Have you ever operated a PBBS? Have you ever set up a node? How many
packet sites have you been involved with? I'm telling you that 1200
baud can handle far more data than is currently being done (with 1200
baud) in most areas. I know this, because I've seen it personally,
and experienced the improvement when it's done properly over what you

get with the typical improper setups.

>that's simply a rationalization/tacit_acceptance_of the perversion that's
>taken place ... those who believe that ham radio's primary purpose is
>for collecting 10-10 numbers or other inane pursuits are not the type of
>hams we need ...

Nonsense. Your elitist attitude is a big part of the problem in ham
radio. There's not one damn thing wrong with collecting 10-10
numbers. It's no more of a perversion than your obsession with
bad-mouthing "beepers" and everyone else you disagree with. Ham radio
is and should be inclusive, not exclusive.

>> Like it or not, we need *numbers* to save our bands, and we're not
>> attracting new hams anywhere near fast enough to do that.
>
>I agree that we need to enlarge our numbers, but to do so with
>the types of people who will do nothing to fullfill our purpose will

And just what IS our purpose? Not YOUR purpose, but OUR purpose?

>do NOTHING to save our bands ... 2 or 3 times more inane waste

You couldn't be more wrong.

>of spectrum does not equal "efficient use of spectrum" it only equals
>"worse waste" ... we need "the right stuff" ... all the salt water in
>the oceans of the world will not save a man who's dying of thirst ...

It will if you have a simple distillery, not that your analogy holds
(heh) any water.

>in fact, drinking salt water will only worsen the situation ... yes,
>we need more hams ... but we need the right KIND of hams ... folks

The "right kind" of ham is anyone who holds a valid ticket and
operates within the rules.

>who will actually learn the theory (or who already know it) and will
>do the work and build the systems and provide the public interest
>return on investment that the regulators envisioned when they allowed
>us to control vast reaches of valuable spectrum ...

Almost all of those "visions" are no longer valid. Perhaps they need
to be changed. Until and unless they are, we need to interpret them
liberally, and we need more bodies to give us the political clout to
save what's left of our bands. You may not like it, but that's the
sad fact of the matter. Money and politics talk, B.S. walks.

>We're NOT just talking about removing the code test, but of restructuring
>the entire license system to eliminate the code-based caste system
>and to assure that even the entry level folks have a reasonable level

>of technical savy ... not EE level, but more than the average ignorant
>appliance operator ...

All you're doing is removing one barrier, and replacing it with
another barrier that's more to YOUR liking. It ain't gonna work.

>>I could have learned something from him. Maybe you could have
>>also.

Maybe, if the radio cops hadn't been so quick to ignore or chastise Jim,
he'd not be trying to sell his barely used ht.
He probably had trouble finding a friendly voice when he got on the air
looking for good conversation. A new ham here in my corner of Iowa would
have trouble doing same.
I'd have explained to JIm in a friendly way that he doesn't have to tell me
what his "personal" is, mostly by example. I would have said something
such as

"GOod morning Jim, the name here is Richard, I'm located in Burlington." I
would have told him about our local club and other activities of interest.
Maybe Jim would turn out to be one of the few friendly voices on my locam
machine which are heard by a stranger when they come through town. Most
strangers coming through myh community put out their call on the local
machine to be greeted with stony dead silence. Five minutes later, if they
didn't just move on to another machine looking for a friendly voice to help
pass the time as the miles roll by would be hearing one good ol' boy call
another, but then be greeted with the same silence if they put out their
call again.
Your friend Jim probably noticed this same behavior and decided he could do
without his new hobby.

>Nice troll, Hans. I see you've caught a couple already.

I don't think it was a troll, Glen. Hans, like many of us, only wants to
see us put our best foot forward. Part of public relations/education is
how friendly we are with newbies. If we can't do this well, how can we

expect them to get involved with ares/races, our clubs, and other parts of the hobby such as those I listed. Emergency preparedness and advancement of the state of the art are our two main reasons for existence. Without those, we have no justification for the spectrum we use. We can't do those things effectively if we don't get newcomers involved.

Just my $0.02 worth.

DIVISIONAL NEWS

TRASH AND TREASURE SALE

The Divisional Trash and Treasure sale is on today at Amateur Radio House, 109 Wigram Street, Parramatta.

Sellers in at 12 noon.

Buyers at 1pm.

This is more than a sale - it is also a good place to meet old friends, or make new ones.

There are a few pre-loved HF transceivers available, and the Office Book Shop will be open.

WICEN NEWS

Next month sees the Tom Quilty Horse Enduro, run by the eponymous Dan VK2GG on the 7th June; we hope to have further information in a later broadcast. The Hunter region will be providing safety communications for the "Lake Macquarie Australian Half Marathon" championships on Sunday 22nd June, and the event co-ordinator will be Peter VK2YGM.

WICEN has been asked to provide a communications network to support this year's running of the Wilderness Rescue Nav Shield. The event consists of about 100 teams, of about 400 people, navigating through the bush to locate various checkpoints located within a 100 square kilometre area. Points are earned by visiting as many checkpoints in the allocated time available. There are two classes of entry, either a one day only or else a two day event with teams staying out overnight. The event will be held in the bush, west of the Central Coast on the weekend of the 28th and 29th of June. If you're interested in participating in an event held out in the sticks that does not entail noisy and dusty rally cars or hot and smelly horses then this could be an event for you. The event may entail camping out overnight, so you would have to be totally self sufficient including all food and shelter, not to mention radio gear and all power supplies etc. It is probable that a four wheel drive may be necessary to access some

checkpoints, so if you do not have one, it may be that you would be dropped off on Friday night or Saturday morning and picked up on Sunday afternoon. The event is held regardless of the weather. For more info, or to offer your services please contact Alan VK2YYJ on telephone 015-097-217, packet radio as VK2YYJ at VK2TGB, at at work on (02) 9839-1388.

The Colo Classic Endurance Ride is on the weekend of 12th-13th July, and Blue Mountains WICEN has been asked to provide communications support. This horse endurance ride is a 24 hour event, starting at midnight on Friday 11th July, with an expected participation of 80 riders and their horses. We participated in this event last year, and it proved successful from both the organisers' and the operators' point of view. We need 13 operators to cover the checkpoints, with each checkpoint open for between 5 and 8 hours, and one operator with a 4WD vehicle would be appreciated. Why not make it a family weekend as there is an excellent camping area where the base station will be located next to the beautiful Colo River. A meal will be provided from the BBQ at the base when operators complete their checkpoint. For further information please contact Neil Fallshaw VK2XNF, at home on (047) 51-6449, at work on (02) 9342-1589, via packet radio as VK2XNF @ VK2TGB, or e-mail to neil_fallshaw@yes.optus.com.au The Hunter region will be providing safety communications for the "CanTeen Annual Troy Newman Cycle Trek" from Sydney to Newcastle on 27th July; the event co-ordinator is Pauline VK2GTB. If there are any ardent cyclists among the listeners who would like to join the trek and help raise funds for CanTeen then please contact Pamela Gee on (049) 26-2555 for more information.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or info they would like published, then please contact the Publicity Officer. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on 015-097-217.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

SPACE NEWS

"FIRE THAT ROCKET NOW!"
ROCKOON LAUNCHED WITH JUST SECONDS TO SPARE

A team of space enthusiasts that includes several hams managed to launch a rocket bearing ATV and APRS systems from a high-altitude balloon off the coast of North Carolina on May 11. But the launch of the so-called "rockoon" almost didn't happen, according to Bill Brown, WB8ELK, of the Huntsville Alabama L5 Society--a chapter of the National Space Society.

When it arrived at the launch site in Hamstead, North Carolina in the early morning hours of May 11, it was frosty and still. "Perfect conditions for a balloon flight!" Brown said. The first glitch occurred when the team found two nearly empty tanks in its helium supply. Concerned they would not have enough to lift the rocket payload, team members scoured Hamstead and nearby Topsail Beach and finally were able to purchase two tanks from a local supermarket that used them to fill party balloons. "This saved the day," Brown said. The team managed to get the balloon and rocket payload off the ground with just five minutes left before its FAA launch window closed.

But it would get a lot more tense before the day was out.
Brown said the team got "spectacular color video" from the balloon, but the GPS telemetry--downlinked via packet radio in APRS format--started to get weak after the rockoon topped 23,000 feet. "The signal faded completely into the noise and we unable to record any more usable position and altitude reports from that point onward," Brown said. "We think that the internal antenna for the packet transmitter put most of the radio signal up and down, but very little signal made it towards the horizon as the payload headed out nearly 120 miles out over the Atlantic."

Almost an hour and a half into the balloon launch, the team estimated the balloon's altitude to be around 60,000 feet. This meant the barometric rocket safety switches would be armed and the rocket could be fired at any time, although the team had hoped to reach at least 100,000 feet before launching. Then, Brown reports, near disaster! "I happened to be looking at the video of the balloon envelope and thought that the balloon looked pretty full. Just then, one of the seams tore wide open, dumped out all of the helium and the balloon just folded up into a long streamer of plastic!" "Fire that rocket now!" Brown says he shouted to Ed Myszka, KE4ROC, as the rocket and gondola dropped rapidly toward the ocean below. The team had just over one minute to issue the fire command before the safety switch disarmed the rocket at 49,000 feet.

As Brown relates: "Ed keyed down the 2-meter transmitter and anxiously entered the firing code via touchtones. Nothing happened! He tried another time. Nothing!" With seconds left, Myszka tried a third time. "All of a sudden there was a bright flash and a cloud of smoke and the rocket leaped out of the gondola and off towards space," Brown said. "Bits of plastic tape and the plastic covering shredded off and fluttered past the camera view as the gondola continued its rapid descent." Miraculously, the balloon camera survived the rocket exhaust blast and continued to work flawlessly until the gondola splashed into the Atlantic.

Brown said the team was treated to flashes of video from the rocket for about 30 seconds, "showing tantalizing views of the curve of the Earth." The rocket's spin caused the ATV signal to flutter in and out and make it difficult to lock onto a good picture. The rocket and the balloon gondola ended up in the Atlantic, but lacking GPS signals, the team was unable to recover them.

Brown estimated that the rocket reached a peak altitude of 38 miles--not quite "space" as the team had hoped (space is defined as 51 nautical miles

in altitude). "We did set several records," Brown said. "The first amateur launch of a rockoon (rocket launched from a balloon), the highest launch of a hybrid rocket (hybrid referring to the nitrous oxide/asphalt fuel combination), and the highest flying hybrid rocket to date."

--The ARRL Letter, Vol 16, No 21, dated 23rd May

DX NEWS

ANNOBON ISLAND (3C0). The planned DXpedition to here has been canceled. The members of the Spanish Amateur Radio Association, URE, have rescheduled this operation for October 11, 1997.
A number of stations will be active in the CQ WW WPX CW (!) Contest this weekend. They are:

GEORGIA 4L7C, on 160 to 10 meters.

CYPRUS Members from the National Russian Team operating as H22A

PHILIPPINES K9AW/DU6, who is active from Negros Island, IOTA OC129, until 1st June.

SAUDI ARABIA HZ1AB, on 40 and 20 meters.

JORDAN JY8YB

GUAM NH2C

BELAU T88X

So much for the contest; other stations to listen out for:

MARKET REEF - OJ0/OH2KI and OH0MMM. Look for activity on 40 and 6 meters and on the newer bands, this weekend.

DODECANESE - SV5/SM7DAY will be active from Kalymnos until June 13, with operations on 20 and 17 meters.

CANADA - Members from the Calgary Amateur Radio Association will use the VF6 prefix until June 1 in celebration of the club's 75th anniversary.

--ARRL DX Bulletin number 23, dated 22nd May

Still with DX, there has been some angst surrounding the Scarborough Reef DXpedition:

CHINA PROTESTS FLAG-RAISING IN DISPUTED REEFS

China accused the Philippines of violating its territorial sovereignty following the hoisting of the Philippine flag at the Scarborough Shoal in the South China Sea. Beijing warned the act "constituted a serious violation of its territorial sovereignty" that could jeopardize bilateral relations between the two countries.

A spokesman of the Chinese embassy in Manila said the Philippines has no right to contest China's claim over the Scarborough Shoal, located west of Zambales, as the shoal "has always been an inherent territory" of China. "We hope that the Philippine side will refrain from any move to complicate the situation so as to maintain the overall Sino-Philippine friendly relations,''
the embassy statement said.

President Ramos said the government would look into the Chinese protest which, he added, could have been avoided had Manila and Beijing both followed the code of conduct they agreed upon with respect to the Spratly issue. Under the code, the Philippines and China agreed to maintain the status quo in the South China Sea as the other claimants, including Brunei, Malaysia, Vietnam and Taiwan, await a peaceful settlement of the territorial dispute in the Spratlys. Manila earlier protested the presence of Chinese vessels in the Philippine-held Kalayaan islands last month.

In related developments:

Defense Secretary Renato de Villa said the Philippine air and naval forces were "prepared and determined to respond" to any Chinese attack even without help from the United States. He made the statement in response to the calls for the scrapping of the Philippine-US defense treaty for lack of a clause that would commit the US to help the Philippines in case of an attack from outside forces. Gen. Arnulfo Acedera, Armed Forces chief of staff, called for a review of the defense treaty to "make it a more workable, particularly with respect to contingency situations." He said the Philippines cannot oblige the US to come to its defense should a shooting war erupts in the Spratlys.

--Internet DX Mailing List, sent to us by Dave Horsfall VK2KFU

CLUB NEWS

RADIO AMATEURS OLD TIMERS CLUB

Members and friends of the Radio Amateurs Old Timers Club are reminded that the next series of broadcasts and call backs will take place on Monday, 2nd June

Times and frequencies will be as follows:
10am "Melbourne time" (2300 hours Zulu) on 145.700 MHz FM, 7.060 MHz LSB and 3.650 MHz LSB

12 noon "Melbourne time" (0100 hours Zulu) on 14.150 MHz USB beaming north from Melbourne

1pm "Melbourne time" (0200 hours Zulu) on 14.150 MHz USB beaming west from Melbourne

8:30pm "Melbourne time" (1030 hours Zulu) on 3.650 MHz LSB for the benefit of members and friends who, for whatever reason, are unable to hear any of the morning transmissions.

Callbacks will follow all six transmissions. News for inclusion in the club broadcasts will be welcomed by Club Secretary Arthur Evans VK2VQ or Allan Doble VK3AMD, both of whom are OK in any call book.

-- Arthur Evans VK3VQ

HORNSBY & DISTRICT ARC. INC.

The next meeting is the Annual General Meeting of the Hornsby & District Amateur Radio Club. taking place, on Tuesday 27 May 1997, at 8:00 pm. Meeting place is, Mount Colah Community Centre, Pierre Close, Mount Colah. (Near the Eastern Entrance to the Railway Station

Training Classes,

For more information phone, Tony VK2BTL on 9487 3383 or John on 9807 2490. The Club conducts. a net each Monday night, at 8:00pm on VK2RNS. The frequency is 147.250 with a positive offset. Feel free to join In. All are welcome. Listeners set your scanner or receiver to 147.250.

Should you wish to know more about the Club, or its activities, please write to :. H.A.D.A.R.C. at Post Box 362, Hornsby, 2077. or contact the Publicity Officer, John VK2WRT on 9807 2490.

--Submitted by John W Turner VK2WRT - Publicity Officer.

CHIFLEY AMATURE RADIO CLUB

The club is open every Saturday at 1:30 PM.

The address is, The Good Shepherd Church Hall, at Hyatts Road Plumpton.

Members guests and visitors are all welcome.

The club holds a 2 meter net on the club repeater at 8:00 every Friday night all checkins are welcome.

Upgrade your morse. Classes on Thursday nights.

For more information ring (02) 9837 2226 or (02) 9834 1186.

Coming events,

31st of May. Lecture on Microwaves and Plumbing By Dave VK2GIO.

--The Publicity officer Michael VK2E

The Wagga Amateur Rado Club invites you to it's Riverina Field Day to be held in Wagga Wagga over the weekend of 9 & 10 August 1997. The weekend kicks off with the Official Dinner and guest speakers on Saturday evening. Sunday activities include trade displays, foxhunts, including a talk-in hunt, a 2m scramble, seminars and of course the flea market.

For more information try the Tuesday Wagga Awards Net on 3605Mhz and talk to Paul VK2KVY or phone John VK2YW on 069 251720 after hours or Don VK2MDB 069 311683 after hours.

>Tim Hynde - KA8DDZ - hynde@flash.net

Tim's last paragraph contains the essence
of his bad logic. The question is not about what is
enjoyable or fun, or enretaining. The
question is why MUST hams on HF know morse code.
All of Tim's example's are quaint and entertaining, but
not one constitutes any compelling reason to have
all hams on HF know the code.
Tim's examples are a great list of those OPTIONAL
aspects of ham radio that anyone can pursue on
their own.

3662. a really weird question.....

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-24 00:00:00 UTC
From: Wert <radio@in.com>
Message-ID: <01bc67c0$f2d29500$39fe35ce@larin>
Source record: 197702

This question is about harmonics in a radio. Lets say I have a 10 meter rig and I wanted to hit a 2 meter repeater with it. With the radio in FM mode the harmonics coming out of the radio could in reality activate the repeater with about the less than one watt harmonic......right? Then if I had a 2 meter receiver I could hear the output. Now my question is.....What quality of a transmission would this be? and if I had a band pass filter on the output of my radio (the 2 meter band), would this be a possible 2 meter transmitter for the repeater?

Any thoughts OM's?

Exactly. A troll is something that's not necessarily true, posted to draw a reaction. It didn't work exactly like you hoped, perhaps, but it sure did work. Was I the only one who figured out that you posted an allegory or parable, not a factual story?

>constructive conversation. I could make a million dollars

Heh, it's UseNet, and this is a Ham conference. Where better to set up shop dispensing clues?

Faulty logic. Eliminating code would have very little effect on Ham
Radio.

>wheels drive amateur radio into the ditch. We have incentive licensing in
>place to create a system to reward the hard workers. Perhaps the incentive
>licensing details need to be changed slightly, but we certainly need the
>incentive system. Twenty word per minute may seem like a lot, but believe

No, the incentive licensing system is a joke, and if what I've read is
anywhere near correct, it's responsible in a large part for a
decimation of Ham Radio from which we have never recovered.

>me it is only a starting point. In my opinion, code contests are by far the
>most exciting operating. Here, one needs to be fairly proficient at code to
>be able to be in the thick of things. I know many code ops (myself
>included) who perform at faster QSO rates on code than on voice. Code is

Irrelevant. A contest is NOT about communication. A computer could
be programmed to do it even faster than you can do it. In fact, most
serious contesters, CW or SSB, use computers extensively to assist
them. Now, if you were to tell me that you use a hand key to send,
and pencil and paper to log, then you *might* have a point.

>not the bad thing so many of you have made it out to be. And as far as
>losing interest in code, just give a listen during a code contest (such as
>WPX) with your narrow filters on, and I bet you count far more ops on code
>than you do voice. Code is good! My utmost congrats to you, Mike on your

If you find CW so exciting and rewarding, then it's obvious that you
don't need a CW test to enjoy it. Why make others learn 20 WPM when

they never intend to use it?

>achievement. YOU SHOULD BE PROUD!!!

Wouldn't he be even MORE proud if he'd done it because he *wanted* to,
not because he was forced to?

Carl wrote that nowhere in Part 97 is "working DX" mentioned.

I guess you've got an old version of Part 97, Carl. My edition shows
that S97.1(e) encourages hams to work DX - it can't be interpreted
any other way. And CW is the mode of choice that most use to
satisfy S97.1(e).

What have you done lately to satisfy S97.1(e)? (Like it or not,
we should be striving to satisfy *all* items listed under 97.1.)

73 from Nevada,
Jeff KH2PZ / 7

You might want to read the _REAL_ Part 97 as opposed to someone's
interpretation.

Sad thing is, it seems for many comments made here and on the air that
most Hams can't understand what Part 97 saying, so they have to rely
on various "Rule Books" that teach the Gospel According to ______
(fill in the blank as appropriate).

Just read it.

DX is not mentioned.

Exactly.

>Ed ... I was talking about what the regulators clearly envisioned and
>codified when they wrote the purpose for ham radio ... and what they

I doubt you were there when that particular regulation was written, so
I don't accept that you can interpret just what it was that was
"clearly envisioned" for the service.

>clearly expected to get in return for the public for the privelege of using
>at least several billion dollars worth of spectrum ... (BTW, I lean towards

It wasn't worth several billion back then, or we'd never have gotten
it.

>the Libertarian side myself, but can't condone perversion and waste of
>public resources on that basis ...)

There's a lot of high-minded rhetoric in the Declaration of
Independence, too, but it's not much of a manual for running our
current system. Part 97.1 was written a LONG time ago, and it can be
interpreted in many different ways, depending on who's grinding what
axe.

>Yes, I disagree with a lot of the perversions of our service that have
>occurred in the past several decades, from "Incentive (to copy faster
>and faster code tests) Licensing" to the explosion of contesting, to
>the inane practice of "what's your 10-10 number?" (it really surprises
>me that THAT phrase isn't "what's your 10-10 number good buddy?")
>and other similar practices that waste valuable spectrum ...

I'm going to have to take strong exception to that comment, too.
Although I haven't been involved since Novice expansion, I used to be
very active in the Ten-X club. Ten-ten-ers were some of the most
friendly, polite, and helpful hams I've ever encountered. They served
a valuable purpose, too, keeping ten meters occupied with real
activity during sunspot minimums. To say that the activities of the
Ten-X club "wasted valuable spectrum" is pure sophistry, and I'd LOVE
to see you attempt to justify it.

I suppose it's possible that the club has deteriorated in quality in
recent years, but that's no reason to badmouth the whole operation.
You have this annoying habit of looking down your nose at any ham who
doesn't fit into your narrow view of what's "proper." You gain no
allies for your agenda with that attitude, my friend.

-
Here is a summary of news items covered on edition #217 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 30-May:
-
1. Congress Approves Legislation Giving Hams Liability Protection
2. New York Governor Proclaims June as "Amateur Radio Month"
3. Atlantic Division Announces 1997 Award Winners
4. ARRL Files Petition Comments on Retail Theft Deterrent System
5. Special Event Station Calendar
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. FCC Releases New Form 610, Improves Electronic Filing System
8. Gettysburg Processes More Vanity Calls, Still No Word on Gate 3
9. Vermont Gets New Section Manager after WA1ITZ Resigns
10. "The RAIN Dial-up" from Chicago
11. Weekly Propagation Forecast
-
Funding for the program's transmission and production expense has
been provided by a grant from Mike Leiviska, KG0WR, of Andover,
Minnesota, where "This Week in Amateur Radio" is heard Saturdays at
8:00 PM throughout the Twin Cities area, as part of the "Saturday
Ham Talk" net. Presentation of "The RAIN Dial-up" has been made
possible by a grant from Mike Reed, N7ZEF, of Sinclair, Wyoming.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm
through the courtesy of the Blue Ridge Video and Digital Society of
Roanoke, VA. A separate "RealAudio" file is also available at this
site. The service is carried on VHF/UHF repeaters throughout North
America and by WA0RCR on 160 meters at 1860 kHz. Contact your local
```

amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

3672. NY Governor Proclaims "Amateur Radio Month"

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-24 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <BbKcwy-.sanderman@delphi.com>
Source record: 197712

SB NEWS @ NYBBS
"Amateur Radio Month" Declared

I am pleased to announce that Governor George Pataki, a
former amateur, has issued a formal Proclamation to officially
declare June 1997 as "Amateur Radio Month" here in the Empire State.
Please note that we were successful in going for the whole month
this year, instead of just a week!

Formal presentations of the official document will be made at
the Rochester Hamfest/Atlantic Division Convention in WNY on May 31,
the Northern New York Hamfest in Plattsburgh on June 7, and meetings
of the QSY Society in Carmel on June 11, and the Long Island Mobile
Amateur Radio Club (LIMARC) (date TBA).

Contact has been established with the governor's Scheduling
Office in an attempt to arrange for a visit by the governor to one
of these locations or to one of the Field Day sites as his schedule
may allow. Due to ongoing budget negotiations with the Legislature,
an appearance by Governor Pataki is uncertain at this time.

The proclamation was received from the Executive Chamber
Proclamations Office on May 23, pursuant to a written request mailed
May 16. Since the official copy of the "Amateur Radio Week"
Proclamation from 1996 rests in Eastern New York, the 1997 "Amateur
Radio Month" proclamation will find a permanent home in one of the
two Atlantic Division sections.

The text of the Proclamation appears below. Please give this
bulletin the widest possible distribution on and off the air. Now,
let's all get to work to help make New York's "Amateur Radio Month"
a huge public relations success!

Very 73,
Stephan Anderman, WA3RKB
ENY Section Public Information Coordinator/Bulletin Manager
packet: WA3RKB @ N2TY.FN32DW.NY.USA.NA
email: sanderman@delphi.com
phone: 518.664.6809 (home)

<newpage>

State of New York

Executive Chamber

The State of New York has more than 38,000 licensed amateur radio operators who have demonstrated their value in public assistance by providing emergency radio communication.

These amateur radio operators promote international goodwill through contacts with foreign stations and cosmonauts on the Mir space station. They provide educational opportunities for young people through the Shuttle Amateur Radio Experiment and Mir Experiment, which brings the voices of space travellers into our classrooms. They donate their services free of charge to federal, state, and local emergency service agencies in the interest of the citizens of the State of New York.

Amateur radio operators are on alert for any emergency, local or world-wide, and practice their communications skills during the American Radio Relay League's "Field Day" exercise, which this year will take place the weekend of June 28-29, 1997.

It is fitting to give recognition to the far-reaching technological achievements of amateurs and this important emergency preparedness exercise, and call upon all citizens to pay tribute to the amateur radio operators of the Empire State.

NOW, THEREFORE, I, George E. Pataki, Governor of the State of New York, hereby recognize June 1997 as

AMATEUR RADIO MONTH

in the Empire State.

/s/
George E. Pataki
Governor

With all the crooked hams in my area, I would be OVERJOYED if
they would remove the address!!
Picture this: A "professional" burglar listens to a 2 meter
repeater for hams talking about what type of ham gear, computers, etc.
they own. He (or she) then looks up the callsign of whoever (s)he
wants to victimize, gets the address, and there goes some hard working
ham's entire station!

I was thinking pretty much the same thing! Lets say I have 1 milliwatt
on 2 meters. I feed that to a Ramsey LPA-1 and get 20 milliwatts. I
then amp that to 2 or 3 watts. Is the harmonic as clean as the main
signal? or will it be distorted?

This is a multi-part message in MIME format.

--------------78041C5F59D
Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

For those of you who missed my earlier post, here it is again.

--------------78041C5F59D
Content-Type: text/plain; charset=us-ascii; name="DISORDER.TXT"
Content-Transfer-Encoding: 7bit
Content-Disposition: inline; filename="DISORDER.TXT"

There is a growing problem in ham radio today, but it's been around for along time. It's has several variations, but has similar origins.
The first is called "Competitive Compultion Disoder" or CCD, which is usually found in "contesters", & some "dxers". Where in, they are overly competitive in their radio operations, willing to go to extreme lenths to "out do" the other guys. Also, they are compelled to use "any means" nessesary to achieve "supeiority", over other hams. Those who spare no expense to have the most ellaborate station, and the loudest signal on the air, are prime examples of this disoder.
Next is called "Coversational Defficite Disoder" or CDD, which is found mainly in "contesters", but also is heavliy infested in "dxers". This disorder effects their ability to coverse with other hams, limiting the exchange to little more than , call, first name, and the all important signal report, which is almost allways 59, regardless if it accually is or not. Once these guys have worked every station on earth, CDD often degrades into CCD. Once CCD has run full course, the ham usually becomes "inactive". Some return, many years later, fully recovered, and some never return.
Please help. These guys feel that there is nothing wrong with them, much like "alcoholics". Through therapy and consuling, we can save them from themselves.

Thanks for your help in curing this horrible disorder.

Matt/KK5DR May 15,1997

This article is satire. If you take it wrong, that's too damn bad !

Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.amateur.misc,rec.radio.scanner

Hi,
Thanks f or reading,i no the ranges for the vfo can be changed on the
AR1000, so was wondering if they can be changed in the same way for th1500 ??
also i am looking for the standard reset procedure for the 1500 i.e key
sequence e.t.c..
thamks in advance ....

Small + handy program, Address, can fill, read, and organise a
database. You can use it for any topics such as books, customers,
music, car, cd, parts, clients, etc... and makes as many different
databases as you like.
The extended search possibility of the program makes it suitable for
any application where many items need to be ordained and found in a
few seconds.
This program gives you the way to manage your collection of items
whatever their topic. This without the complication of big database
programs. You can start without any specific knowledge on the subject.
you just need a mouse... and visit:

http://www.xs4all.nl/~bernard/adhome_e.html

see you there,

The IC-R1 does not have SSB as an operation mode. ONLY AM, FM, and Wide FM. No wonder it did not work on SSB, it is not capable of demodulating SSB.

>they would remove the address!!

In today's joke of a society that we live in, only fools will give out their actual home address. The FCC does NOT require that the station location be on record with them. You need only provide a mailing address where you can receive correspondence from them.

>
> But realistically, there's not much stopping that from happening right
> now. I see lots (for some small value of "lots") of folks inventing
> and innovating and adapting stuff for ham radio right now.

Not nearly enough ... and a significant portion of the technically
skilled folks that we need are unwilling to suffer through the Morse
hazing ritual when they have no interest in Morse and will never
use it ...

> Problem
> is, not all that many of the average users want to adopt and exploit
> those innovations.

The problem is that the "average user" is too technically deficient to
be able to recognize the advantages of the neat new stuff or is so
stuck in the past that he's unwilling to accept it even if it's benefits
are clearly demonstrated ...

> Techies generally don't do much "normal"
> operating; they prefer to tinker and innovate, then if their ideas
> catch on, they move on to other things.

I disagree in several respects ... first your implied assumption about what
constitutes "normal operating" ... I get a picture of contesters, DXers, and
a lot of inane gaming ... that's a perversion of our service, not what should
be "normal operating."

Additionally ... the "tinker and innovate, them move on" is a bit inaccurate.

> This is part of what's happened to packet. The experts and innovators
> have moved on, and the users who are left are unable or unwilling to learn
> enough to keep the system going and upgrade it.

Again, I disagree ... I don't see any room to blame "the experts and
innovators"
for the dismal state of packet radio ... nor do I agree that they've "moved on"
(implying that they've abandoned something or someone) ... the users "who are
left" never were willing to learn enough to keep the system going and upgrade
it ...

they never had anything to do with it's availability in the first place ... all they did
was buy a stupid TNC and expect that someone else would spend all the time,
effort, and money to make wonderful services available to them ...

This community of lazy, cheapskate users has eternally been unwilling (in the
vast majority) to contribute work, money, or even to cooperation to the expansion,
modernization, or improvement of packet radio ... they'll spend money every month
on internet access (say something on the order of $20/mo) ... they'll buy new gizmos
for their computers (like faster LL modems) but if anyone suggested that they contribute
to the funding of improvements in the local packet infrastructure or invest in a new
packet radio gizmo, they're outraged ... I am forever amazed that the folks who have
done all the work (people like Phil Karn and many others at TAPR, GRAPES, and
other groups at the forefront) haven't said "screw you selfish, ignorant bastards" quite
directly and publicly ... the selfish, ignorant bastards certainly deserve it
..

> The fact is that even at 1200 baud, one
> can move a lot more data than what we're doing in most areas, if only
> some common sense were applied. I could write a bleeping BOOK about
> this, I tell you!

Suggesting that 1200 baud is a truly viable solution generates serious
questions in my mind WRT your level of knowledge and common sense
in this area ...

> >contributions to the SOTA ... we still can, despite protests to the

> >and play games crowd" ... and we need to do public service ... we
>
> You don't need much tech knowledge to do public service. It's more a
> matter of training, practice, and cooperation.

But you need SYSTEMS that can handle the traffic, survive the disaster,
etc ... that's where the techies come in and are necessary ...

> >CANNOT justify our occupancy of our bands on the basis of competitive
> >games, collecting wallpaper, and any of the several other perversions
> >that have crept into the service and distorted the perception of the
> >raison d'etre in the minds of far too many incumbents.
>
> But ham radio is a *diversified* hobby,

that's simply a rationalization/tacit_acceptance_of the perversion that's
taken place ... those who believe that ham radio's primary purpose is

for collecting 10-10 numbers or other inane pursuits are not the type of
hams we need ...

> and we need to make room for
> every aspect of the hobby, even if we don't care for it ourselves.
> Like it or not, we need *numbers* to save our bands, and we're not
> attracting new hams anywhere near fast enough to do that.

I agree that we need to enlarge our numbers, but to do so with
the types of people who will do nothing to fullfill our purpose will
do NOTHING to save our bands ... 2 or 3 times more inane waste
of spectrum does not equal "efficient use of spectrum" it only equals
"worse waste" ... we need "the right stuff" ... all the salt water in
the oceans of the world will not save a man who's dying of thirst ...
in fact, drinking salt water will only worsen the situation ... yes,
we need more hams ... but we need the right KIND of hams ... folks
who will actually learn the theory (or who already know it) and will
do the work and build the systems and provide the public interest
return on investment that the regulators envisioned when they allowed
us to control vast reaches of valuable spectrum ...

> >> Face it, you're never going to increase the percentage of "techie"

> In fact, I'd guess that you'd get far more App Ops than Techies with
> such a change.

We're NOT just talking about removing the code test, but of restructuring
the entire license system to eliminate the code-based caste system
and to assure that even the entry level folks have a reasonable level
of technical savy ... not EE level, but more than the average ignorant
appliance operator ...

Glen ... it most directly addresses the point ... that, in addition to the
fact that code testing is NOT a popularity contest, but an issue of what
is appropriate for a government licensing requirement, code fails the
popularity contest, if one looks at the factual, real numbers.

That people like MD insist on distorting things to imply that Morse is
nearly a dominant mode of operation only proves the weakness of
their pro-code-testing-caste-system positions ...

> DX is not mentioned.

Hi Marty,
My copy of Part 97 came from the U.S. Government Printing Office, and
I can understand it quite well (as with most government pubs, it's
written at a 9th grade reading level).

The key word in 97.1(e) is "international". You might be a
VHF-only operator so you probably interpret that as meaning
using AT&T or MCI, but to HF hams, "international" equates to "DX".

I note that you used the word "Hams" in your post; I can't find any
mention of that word in Part 97. But just as we interpret "ham" to
mean "amateur", we interpret "international" to mean "DX".

73 (that means "best regards", Marty),
Jeff KH2PZ / 7 (who has been "extending international goodwill",
i.e., "working DX" via CW for 21 years)

Hi, Carl.

Now, Carl, I don't recall any mention of Morse code. How did you know that Jim had a no-code license? As bright as he was maybe the theory was so simple that he decided to go "all out" and get a license that required the code test. <g>

At any rate, I've been a "beeper" since 1962, and I have never, ever corrected a newcomer on the air. If the newcomer wishes to use "personal" or "handle" that's fine with me. One doesn't have to "correct" a neophyte -- he'll assimilate the ham lingo if he chooses to. I guess we all have our pet peeves.

Hope you're doing well.

Best Regards,
Lindsay

> "clearly envisioned" for the service.

All you have to do is read the words and interpret them literally ...
there really isn't any ambiguity ...

> >the Libertarian side myself, but can't condone perversion and waste of
> >public resources on that basis ...)
>
> There's a lot of high-minded rhetoric in the Declaration of
> Independence, too, but it's not much of a manual for running our
> current system.

I am shocked to hear you say that you doubt or disagree with the
principles outlined in the Declaration of Independence ... last time
I read it, I believed every last word I saw ...

> Part 97.1 was written a LONG time ago, and it can be
> interpreted in many different ways, depending on who's grinding what
> axe.

Part 97 was "rewritten in plain English" not too many years ago ... it's
not exactly an "ancient document." And I really do find it to be relatively
clear and unambiguous ... even in the parts that specify antiquated
practices and ridiculously restrictive prohibitions on the use of modern
technology ...

One thing that it's not is "sacred and inviolate" ... in other words, it
CAN and SHOULD be changed to keep up with the times, the technology,
the needs of the service, and the public interest ...

> >Yes, I disagree with a lot of the perversions of our service that have
> >occurred in the past several decades, from "Incentive (to copy faster
> >and faster code tests) Licensing" to the explosion of contesting, to

>
> I'm going to have to take strong exception to that comment, too.

Feel free ...

> Although I haven't been involved since Novice expansion, I used to be
> *very* active in the Ten-X club. Ten-ten-ers were some of the most
> friendly, polite, and helpful hams I've ever encountered.

I didn't say they were unfriendly, rude, or unhelpful ... just that the
practice of "collecting 10-10 numbers" is inane (idiotic, pointless,
has no sense ...)

> They served
> a valuable purpose, too, keeping ten meters occupied with real
> activity during sunspot minimums. To say that the activities of the
> Ten-X club "wasted valuable spectrum" is pure sophistry, and I'd LOVE
> to see you attempt to justify it.

Creating artificial, pointless activity is not my idea of "real activity" or "a
valuable purpose" ...

> I suppose it's possible that the club has deteriorated in quality in
> recent years, but that's no reason to badmouth the whole operation.

The whole operation was oriented around collecting as many "10-10 numbers"
as possible and asking *everyone* one came across "what's your 10-10 number"

This caused people to have to "join the club" to obtain a 10-10 number if they
wanted to talk to anyone, since large numbers of people on 10m were primarily
interested in a quick contact to "score another 10-10 number." ... I have
actually
had people tell me, "if you don't have a 10-10 number, why did you bother to
say hello?"

This "whole operation" makes hams look like a bunch of mindless idiots,
running around with some sort of ridiculous radio cult equivalent of "official
propeller beanies and secret handshakes" or some such nonsense ...

> You have this annoying habit of looking down your nose at any ham who
> doesn't fit into your narrow view of what's "proper."

I view it as simply looking at ham radio through the eyes of a rational adult,
rather than viewing it in some sort of childish, escapist, "in-denial of
reality"
sort of way ... if many hams knew what ridiculous geeks they look like to the
average person (and, likely to the regulators, upon whom we depend for our
very survival) they'd be embarrassed (if they had the sense, which apparently
is not the case with many ...)

Carl - wa6vse
wa6vse@fast.net

> You gain no allies for your agenda with that attitude, my friend.

As I said in another recent reply ... all the salt water in all the oceans
of the world will not save a man who's dying of thirst ... in fact, salt water
will only speed his demise ...

We don't need more propeller-beanie, secret handshake-oriented geeks ...
we need rational, technically-competent people who will build modern
communications systems and use them in ways that benefit the public.
All the games and inane cult activity in the world will not justify our
continued
existence in the face of the tremendous pressures on our bands from a wide
variety of competing uses in the coming decades ...

> There's a LOT more to the rules than what's in Part 97.1. I don't
> condone going outside the rules for your "fun." You've erected a
> strawman here which has nothing to do with what I wrote.

The point that I have been trying to make is that the "its' JUST a hobby"
line is false ... it's a service. And the fact that something is "fun" to
even a large number of current licensees does NOT mean that it is
"meeting our chartered purpose" in any way ...

Unfortunately, large numbers of people with the "it's JUST a hobby" mindset
have entered ham radio because of the ARRL's promotion of the competitive
games aspect and Morse code above all else and the service has been
substantially perverted by that force into something *very* different from what
it's *supposed* to be and from what meets the goals that the regulators clearly
established in 97.1 ...

Denying this only perpetuates the problem and exacerbates it ... this WILL
ultimately cause the death of ham radio if we allow it to continue ... that's
why so many of us are trying so hard to promote some rational change back
in line with what amateur radio is *supposed* to be about ...

We're not trying to prohibit DXing or any of the other stuff that many hams
enjoy,
just to point out that they cannot justify our existence if they are the sole
thrust
of our activities ... there has to be a sound technical and public service
foundation
upon which the "hobby" activities can rest, what we have now is a sand castle
and

the tide is coming in ... if we don't shore things up, and fast, nothing will be left
when the tide turns again ...

3698. New bestiality net on 20 meters.

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-25 00:00:00 UTC
From: nobody@REPLAY.COM
Message-ID: <199705260320.FAA02247@basement.replay.com>
Source record: 197489

Barry O'Grady is proud to announce the first ever Bestiality net on 20 meters. To prevent jamming from Christians, Barry's callsign, and the net's frequency/sked will be kept secret. If you wish to find out this information, please email Barry at barryo@fastlink.com.au.

Acceptable topics include bestiality and how it goes with atheism in your daily life. Topics that pertain to purely ham radio will be frowned upon.

In the next meeting.....

Barry will tell the story of how he lost his HT inside of the moist twat of his mare, and how it was later recovered when the mare gave birth. BTW, mare pussy juice is acidic in nature and corrodes the HT internals.

Sex with hams will be discussed in full detail. Did you know that hams have corkscrew penises and can cum up to 300 mL of semen. It's watery, lumpy, and slimy, yet it tastes great. How do you have sex with a sow. How do you massage a male pig's sheath so his dick will come out. All this and more!

As always, Barry O'Grady will have a stocking full of meaningful one line responses to the great questions of our time.

That's the Bestiality Net on 20 meters.

Email barryo@fastlink.com.au

73's, and give that horse some 69's

Most of the period of a LEO satellite's visibility is spent near or at the horizon. Turnstiles and eggbeaters work lousy at these takeoff angles. This is why GPS receivers don't work well in the mountains and cities, BTW.

> RS15 should boom in, ...

Maybe if its right overhead. In my experience, RS-15 never booms in. The most successful operators use a 10 meter yagi with mast-mounted pre-amp to work RS-15.

I use a two element, 10 meter yagi. Its light, compact, and will hear the satellites to the horizon as well as overhead. Two dipoles at right angles to each other that you can switch between might also work okay.

And I see that you have been unable to support your statement that the word DX is in Part 97, so instead turn to insults and personal attacks.

What 97.1 states is to "...promote international goodwill...". Making the band sound like 11m does exactly the the wrong thing.

Most of the operators in other countries that I have spoke with think of the US "DX Chasers" as the ultimate example of bad operators and get quite a chuckle out of the fighting that starts from the pile ups.

The various contests are even more entertaining. Sort of like the Saturday night WWF show on TV!

Take Care & 73

SB DX @ WW $OPDX.306
Ohio/Penn DX Bulletin No. 306

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 306
BID: $OPDX.306
May 26, 1997
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N6VV, EA4BB, I4IFL, IK8VRH, OH2BU/OH7RF, ON4BDS, OZ5MJ, SM6DER, VK4LW and YZ7ED/YU4 for the following DX information.

CANADIAN BC IOTA ISLANDS. In July you will see the first operation from Dundas Island (NA-118) since 1989. Also in July, a group from the U.S. and Canada will particpate in a Multi-Op effort from Queen Charlotte Island (NA-051) during the upcoming IOTA Contest. But before all this starts, Lew, N6VV, will be active as N6VV/VE7 from Quadra Island (NA-091), July 18-21st. Then from July 25-28th, Lew/N6VV/VE7 with K6XV, W7DR and a group of local VE7's will operate a Multi-Op station for the IOTA Contest from Queen Charlotte Island (NA-051). After their contest effort, N6VV/VE7 and W7DR will be active from the Dundas Island Group (Green Island) (NA-118) July 31st to August 2nd. All activity will be on 80-10 meters plus the normal IOTA frequencies with operations on CW and SSB. QSL via N6VV CBA.

D2, ANGOLA. Just before going to print, the OPDX received a message from Fernando, EA4BB and ex 9Q5BB. Fernando states he has received the license, D2BB. He will be working in D2-land and plans to stay for a year and a half. He will be operating all bands in his spare time. For the moment his rig is a CODAN transceiver with 100 W output, and the antenna is just a folded multiband dipole. He plans to upgrade this antenna soon, but is limited to SSB until he can get ahold of a key. QSL is via EA4BB, either bureau or direct.

DAYTON HAMVENTION DX HIGHLIGHTS (by Editor). Still recovering from the long three day event, I figured I should report (share) SOME of the activities that took place. The Southwest Ohio DX Association Dinner Banquet, which took place Friday night (May 16th), was highlighted with an interesting talk/slide show by Bob, KK6EK, on the Heard DXpedition. The majority of the VK0IR team was also present. The Southwest Ohio DX Association awarded the VK0IR team a plaque for DXpedition of the Year.

The SWODXA also awarded Ron, Wright, ZL1AMO, a plaque for DXpeditioner of the Year. The Hospitality suites (Friday and Saturday night) at the Crown Plaza where great as usual. I was especially pleased to see such a good response to the Northern Ohio DX Association's hospitality suite. The DX Forum on Saturday was also great. There was more on Heard Island and the VK0IR team (Just can't get enough - BUY the book and video!). There were also speakers for the TN2U/TN4M, XZ1N and ZL8RI DXpeditions. There was one thing missing this year. Many have commented and noticed that there was no report from the League and the DXCC Desk which usually opens the DX Forum every year. Lastly, I enjoyed myself as always. It is wonderful seeing all the friends I have made over the last few years (especially since I started writing the OPDX). Friendship is a major part of this hobby and I will be looking forward to returning to Dayton next year to see all my friends again. It is a shame that it only happens once a year.... 73 and GUD DX de Tedd KB8NW

FRENCH IOTA'S. David, ON4BDS, will sign F/ON4BDS/P from several French West Coast islands from July 12-28th. Look for David to activate the following IOTA's: EU-157/Cezembre July 13-16; EU-074/Brehat July 16-19; EU-065/Ouessant July 19-22; EU-068/Sein July 22-25; and EU-094/Glenan July 25-28 (This schedule is subject to change). He also plans to be active in the IOTA contest from the Glenan Islands. Operations will be on all HF bands in both SSB and CW (not more than 10 wpm PLEASE!) QSL cards are "OK" via the 1996 Callbook adress, or via the bureau to ON4BDS, his home call.

I.I.A. (Italian Islands Award). This Award/Trophy is issued by the Crazy DX Group. Every OM and SWL (world-wide) can participate. The purpose is to contact/listen/activate the largest number of different Italian islands. Only referenced islands from the official IIA list will be valid, but any possible island reference released after the Trophy's starting time will also be valid. The participation is free of cost. Participation period is from June 1st to September 30th, 1997. For more details checkout the I.I.A. Web site: http://www.mline.peoples.it/crazy

KH0, MARIANA ISLANDS. If you're lucky, you may catch a contact with Aki, JA5DQH, as KH0AA from Saipan before he leaves. He will be there until May 27th. He was active in the CQWW WPX CW contest. Aki will be running 500 watts and use only dipole and vertical antennas on the roof top of his hotel. He plans to be active on the WARC bands and 160 meters. His Sunrise/Sunset is 1944z/0840z. QSL via JA5DQH.

MALYJ VYSOTSKIJ ISLAND (ex-4J1). Jari, OH2BU/OH7RF, reports the following: After a nearly two year hiatus, Malyj Vysotskij (ex 4J1-) will be reactivated this coming June. This 7th M-V Island DXpedition will start operations late afternoon (local) on Thursday, June 5th, and run through Monday morning, June 16th. Two callsigns are in use, OH5AB/MVI and R1MVI. Both calls reflect the uniqueness of this DXCC country located within the territory of Russia but under the control of Finland. Malyj Vysotskij, or Ravansaari, (EU-117) is located in the Bay of Vyborg northwest of St. Petersburg. The all-band, all-mode operation, involving twelve operators

from Finland and Russia, will be running at least three complete stations 24 hours a day. Look for this operation on the following frequencies:
CW - 1830, 3501, 7045, 10101, 14025, 18069, 21025, 24891 and 28025
SSB - 1845, 3795, 7045, 14195/14295, 18145, 21295, 24945 and 28495
RTTY - 14084, 18104, 21084 and 28084 kHz

There will also be some local 144 and 432 MHz operation, but there will be no satellite operation. Operators are Orvo/OH5NE, Ari/OH5KUY, Eero/OH5PT, Veikko/OH5YB, Pentti/OH5WR, Alex/RV1AC, Alex/RU1AS, Alex/RZ1AZ, Vasiliy/RV1AN, Igor/RN1AB, Vlad/RA1ACQ and Vlad/RW1CW. All operators are from Lappeenranta and St.Petersburg Radio Clubs. QSL manager for OH5AB/MVI and R1MVI is: OH5NE, Orvo Arkko, Muukko, FIN-53400 LAPPEENRANTA, FINLAND.

N6, SANTA CATALINA ISLAND (USA). Europeans begin looking for Lew, N6VV, from May 30th to June 2nd, signing portable (N6VV/p) from IOTA NA-066 during the West Coast morning and evening openings. Suggested frequencies: 14260 SSB, 14040 CW, 7260 SSB and 7040 CW. QSL via N6VV CBA. Additional information can be obtained from Lew at lew@premenos.com or his WEB site at: http://www.book.net/N6VV

NEW IBP HF BEACONS. Martin, G3USF, IARU Region 1 HF Beacon Coordinator, reports another of the five-band HF beacon network stations is now operational. The VK6RBP beacon, sited 28km south-east of Perth, is like all the other IBP beacons where the power steps down from 100 watts to 0.1 watt in four stages, transmitting 10 seconds on the IBP frequencies on the 14, 18, 21, 24 and 28 MHz. Also, the JA2IGY beacon which operated on the 14100 kHz frequency only, is now understood to be operational on all five bands. According to Martin, this leaves four beacons not as yet operational (BY, UA, OA and ZL). There are 14 beacons now on the air, and all these beacons are sponsored by NCDXF.

OJ0, MARKET REEF. The planned operation by OH2KI and OH1VR during the CQWW WPX Contest for this past weekend had to be cancelled due to transportation/weather problems.

PARTNERSHIP FOR PEACE (PFP) AWARD. Sten, SM6DER, reports during the "Partnership for Peace" exercise in Sweden, the Hisingens Radioclub (SK6AW) together with Naval Command West (SL6BE and SL6BF), will issue an award for working amateur stations between now and May 31st. Information and rules can be found on the following WEB-site: http://home3.swipnet.se/~w-34041/award/

QSL INFO AND NEWS....
Ivano, I4IFL, reports there is a new address for the QSL Manager of IQ4T: IK4HVR Francesco Tonetti, Via Marmolada 66, 47023 CESENA FO, Italy.

T88X - Operator Tosy, JA6VZB; QSL via JA6BSM for this contest. (Note: WPX SSB is via JE6DND).

YT4I and 4O4C active during CQ WPX CW Contest have the QSL Manager of YU4WU, Robert Babec, P.O.Box 224, R.S. via Yugoslavia.

SPECIAL EVENT (1 DAY!). In celebration of one of the greatest bridge/ tunnel constructions in the world which will be opened for railway traffic June 1st, the following Danish stations will be active on the Store Baelt (Great Belt): OZ2DSB, OZ3DSB, OZ5DSB, OZ6DSB, OZ8DSB and OZ4DSB/GB. The last station will be situated on the bridge. The stations will be active June 1st, from 0800 to 1600z. The frequencies will be 3700, 7060, 14335 kHz and 145.450 Mhz. There will be 3 QSL-cards issued. One of them will be in watercolor showing a freight train leaving the tunnel. QSLs will be sent to all, but if you want a direct QSL or need further information please contact: OZ4IO President for FIRAC/OZ, Oluf Krog, Brinken 5, DK 8260 Viby Jylland, Denmark.

VK9W, WILLIS ISLAND. The Oceania DX Group (ODXG) is planning a DXpedition here with the following operators: Harry/VK4DHM, Bob/VK4MR, Jon/VK4CY, Ann/WA1S, Jon/K7CO/VK2DXT, Gaby/XE2Z/XE2GV, Elvira/IV3FSG, Eric/FK8GM, Bill/VK4FW and one JA YL yet to be announced. The ten operators plan to leave Cairns, Australia, on September 9th, on the 60 foot vessel called "FLOREAT". This journey will take approx. 30 hours and the DXpedition will have over 3 tons of equipment which include 800 litres of petrol. Their 12 day stay on the island will consist of 2 separate campsites set up to operate up to 6 complete HF stations and 1 on 6 meters. They plan to operate 160-10 meters, SSB, CW and RTTY. The budget for this Dxpeditions is $32,400 (USD). Donations are most welcome no matter how big or small. They report that they are fortunate that the vessel has been secured at a reasonable rate, or it would have been $40,000 (USD). Donations can be sent to ODXG WILLIS EFFORT, P.O. BOX 929 Gympie, QLD 4570, AUSTRALIA. A ODXG Dxpedition home page detailing the Willis Island trip by ODXG members has been put online at: http://www.keylink.com.au/odxg

ZP, PARAGUAY. Ernesto, LU6BEG, who was active last weekend as ZP0M during the CQWW WPX CW Contest, will continue to be active after the contest as ZP5/LU6BEG. The length of his activity is unknown. QSL ZP0M via ZP5XF and ZP5/LU6BEG via home call.

>Paul, VK2THN.

I have no problem with tinkering and changing things if it will help. It's the money thing I'm talking about. Change for the sake of change is rediculous though. If it isn't broke leave it alone is how I feel. It isn't our fault the rocket isn't going up on time, why should we pay for storage (if that's the reason). More work=more money as far as the sat is concerned is a bogus excuse. Guess the volunteerizm isn't there....I have no problem with

asking for donations by the way.

Yin Lung Shih wrote that ham radio is not a hobby but rather a service...

Well Yin, I looked through Part 95 and couldn't find the word "hobby" mentioned, but neither could I find the word "ham radio".

Every private pilot I know refers to their pastime as "sport flying" but nowhere in the FAA regs do you see "sport" mentioned.

Besides, many hams consider their service (ARES, RACES, MARS, phone patches, message handling) a hobby. Serving as a hobby? Sounds fine to me - why scold someone for thinking in that manner?

Tell me, who am I serving when I build a new QRP radio? Who am I serving when I call CQ on 40m? I just converted a CB to 10m - who was served? I'm restoring a 1958 Globe Scout transmitter - what service am I performing?

I'd estimate about 1% of my ham time goes to service related duties (Oahu Civil Defense RACES). Short of manufacturing more hurricanes or tsunamis, that means the remaining 99% is spent on hobby-type aspects. Why would that upset you so?

73,
Jeff KH2PZ / 7

> legal.
>
> >William Lee

Legality dosen't matter. Actual performance dosen't matter. What matters
is how can I impress my friends with the amount of money I dumped into
this crap.

These guys buy antenna gadgets for insane prices that have absolutely no
measurable effects, screw up their audio with processors and reverbs, add
in a "roger beep" that's 20 dB overmod, operate on any frequency they can
get their gear to run on, (remote control users.. TOO BAD!)

In actual fact, if the band is open, you can work the world with 5W (on 10
meters, where it's legal). If the band is closed, then no amount of power
will help. the only use for all this junk is a nightly screaming match.
Repeat
in every town out to the edge of ground wave propagation, and it's no
wonder
you can't use CB for anything useful anymore.

Back in my CB days, I used to get a lot of fun by outperforming very
expensive
base stations from a 5W mobile rig. Of course I read and understood the
ARRL antenna handbook, and actually installed my system properly..
The total cost of my antenna mod was about a nickel.

Still, they don't care what problems they cause for other users in the fire
and
police bands, ham bands, TVI.. Just as long as they can out-shout the
idiot down the street, that's what matters.

Dick - I don't think you have visited here in Portland for a few years now. Things have changed. This guy bragging about 40-50 KW is an extremest, but he does bring up an interesting issue. Things are becoming to the point where sometimes the only way you get your right & respect with repeater coordinations is to FORCe the right & respect.

It is unfortunate but true. Ask, Neil, he has seen some of the same bullshit. He sat in an ORRC meeting & witnessed my repeater be de-coordinated without me ever being informed it was on the agenda.

Once again, you have ignored obvious facts in order to post more
boilerplate drivel in support of your rigid position. I've already
told you that I favor elimination or modification of CW testing. As
to who's "hopeless," that doesn't concern me.

I gracefully accept your abject capitulation in this particular branch
of the discussion, however. It's not often that I win an argument
with a zealot this easily.

You may now go back to wasting your time browbeating some other
victim.

>if they are or are not qualified under a reasonable, rational set if test
>criteria ...

OK, if you want to go that route, it's not the government's place to
determine your technical proficiency, either. The interest of the
government is limited to insuring that hams don't cause harmful
interference to other services. This would require only an open-book
test on the rules and regs, possibly including some very simple and
basic electronic theory. When you use the libertarian minimalist
approach to government to justify the elimination of CW testing, you
are standing on a very slippery slope.

>Now I know why I skipped over the "esprit de corps" stuff before
>... it's irrelevant.

No, it's because you either don't understand it, you cannot refute it,
or, more likely, because once again your tunnel vision caused you to
ignore what I actually said as opposed to what you think I said.
Here it is again:

>>I said nothing about any popularity contest, or the
>> appropriateness of licensing requirements.

I invited you to discuss this concept OUTSIDE the moronic CW/NO CW arguments. If you can't or won't do this, fine, just decline the offer. Don't try to cop out by screaming "irrelevant to the testing issue."

I'm not a language policeman on ham radio. I don't jump into
conversations to correct people's usage. But when a new ham comes
along to chat with me, and the subject comes up, I may well mention it
in a tactful manner. Better from me than from one of those "language
cops," right?

I do have a "thing" about correct English usage, spelling, and
grammar, even though I'm far from an expert on any of them. The
dumbing down of our society needs to be opposed, don't you think?

>own set of words that might seem like unnecessary jargon
>to thers...but so what. Really now, who cares?

There are legitimate uses of jargon. Much of it is just nonsense,
however, and tends to be used to define an "in" group and to keep
"outsiders" at bay, rather than to facilitate conversation.

For instance, the acronym "SWR" is a quick shorthand for a technical
term that has meaning to hams. Even "10-4" has meaning and is useful
when used in the appropriate situation. These are examples of valid
jargon. Such atrocities as "personal" and "destinated" are just

garbage habits picked up from somebody who thought they were cute when
he invented them. They have no legitimate purpose and should be
discouraged by anyone who has a love of good usage of the language.

In a word, no. No particular technical knowledge is required to use CW. It's self-testing. If you know it, you can use it. If you don't know it, you can't. That's leaving aside the possibility of computer assistance, of course. But if you have a computer, there are far more efficient ways to use it to communicate than as a CW generator/reader.

>KE4IKT
>sco@sco-inc.com
>

I have sent my ideas to several of the A.R.R.L. directors, prior to
their July board meeting. I have received several nice replies. One
director was very honest and told me that the A.R.R.L. directors will
not submit any proposal to the FCC for licensing changes unless the
membership (of A.R.R.L.) is in support of the idea. Plus he told me
that my ideas are a small step in the right direction but too
progressive (my words) for the present board to consider.

Therefore I ask ALL hams to send your suggestions to the A.R.R.L.
directors ASAP if you really would like to see a licensing change
soon. You can find the email addresses in QST magazine or just send
them to: hq@arrl.org

It is OUR ham radio ... don't just complain about the situation. Do
something about it!!!! Make up one of your own ideas for change or
support one you read about and like. Lets flood the A.R.R.L. with our
messages like we did re the little leos proposed takeover bid of our
2m/70cm bands. Let the A.R.R.L. Board know that we (hams) do want them
to provide leadership for a constructive improvement/change of the
current licensing structure.

>on us in the past, so why should now be any different?

The only thing "absurd" is your belief that somehow one part of Part 97.1
is somehow "more important" than the others. Can you point to the relevant
section of Part 97 which defines the proportional percentage weight that
each sub-section of 97.1 holds? Something meaningful, not your personal
opinions spouted as "fact".

I thought not.

>> Section (e) deals with enhancing

>a few times, right? That's about the same as getting stomped into
>oblivion by some obnoxious "big-gun" DX contest station ...

Talk about your "strawman" erections...

So, we condemn an entire aspect of amateur radio based on the actions of
a relative few?

Based on your definitions, we should just eliminate amateur radio altogether,
since hams are just a bunch of "foul-mouthed jammers". I'm sure I can pick
out one or two callsigns on VHF or HF to justify this.

I've never insulted you, so you have no basis for this opinion. My
"history" is to insult Carl, but only because he is an obnoxious twit
who I enjoy goading at every opportunity.

>Some folks lose sight of the fact that ham radio is supposed to be fun

Carl would say that Part 97 doesn't say that amateur radio is supposed
to be "fun".

> I don't like a lot of what goes on in ham radio,
>either. So, I don't do those things. I avoid areas where they're
>done. Simple concept, isn't it?

Yup, and I agree completely. I don't do RTTY even though my PK232 has
the capability, but it doesn't interest me. The technical aspects of
radio above and beyond those that I must know to accomplish what I want
to do in radio do not interest me. That revelation brings a string of
personal attacks from the likes of Carl who think amateur radio =
technical pursuits.

>99% or more of our bands are unused,
>so there's plenty of place to play for everybody, with room for at
>least ten times as many as we have right now, without even inventing
>much new technology.

Well, I don't know if I agree with you on this. Sure, a major portion
of our spectrum goes unused, with the bulk of amateur activities
occurring at 440mhz and below. However, the absence of inexpensive,
commercial gear for higher frequencies means that usage in those areas
will not take off for some time to come.

>The major push behind elimination or reduction of CW right
>now is the big manufacturers, who need to sell high end HF rigs to
>make a profit.

Yup. Remember the old adage: follow the money. If someone can make
a buck off of it, you bet they will support it.

>ways been a smashing success (it's now the most popular method of
>entry into ham radio) it did not and has not done enough because it didn't
>go far enough in modernizing our licensing scheme ...

So, now you want to have it both ways. The "codeless license" was a
"success", but it wasn't "successful enough".

Unfortunately, you provide nothing substantive to support your assertion
that merely eliminating the CW examination for HF access will now become
"successful enough". The CW-test-elimination for VHF was supposed to be
"successful enough" (at least, that was what its supporters claimed back
in the '80's) to flood our bands with hordes of technical elites. You've
provided nothing to support your assertion that an HF codeless license
would be any different.

I think the other poster nailed it on the head. Any change to the
licensing system will draw equally from people of all intelligence
levels on the bell curve, >unless< you specifically do something to
skew that selection in favor of the more "technical" people you claim
you want to eliminate the CW examination for.

Thus, in effect, what you really want to do is replace one "filter"
(a CW examination, which you personally do not like) with another
"filter" (whatever it happens to be, something you like because it
conforms to your own personal ideas of what amateur radio should
be.)

>The problem is that the curent system rewards stagnation and sloth.
>It actively seeks to stack the deck against those who would promote
>progress, learning, and modernization in the interest of preserving the
>status quo for the incumbent fossils ...

How would any change in the licensing system, with the exception of
people being retested on new material at periodic times, change this?

<< Right on. The major push behind elimination or reduction of CW right
<< now is the big manufacturers, who need to sell high end HF rigs to
<< make a profit.
>
>This is an absurd accusation ... I certainly don't have, nor am I aware of

>international goodwill. "Games" and "Contests" are one way of doing
>that, and we've been doing it for years, not only in amateur radio
>but also in other ways -- like the Olympics, internation chess matches,
>etc.

1) It is debatable how much of 97.1 deals with technical matters,
since two out of 5 clauses explicitly specify technical competence
and advancement while two more out of the remaining 3 imply or partly
deal with technical competence: "emergency ops" and "pool of trained
personnel". The more competent you are, the more likely you are to
get on the air with a working system (antenna and power supply as well
as rig) in an emergency and you can't be a trained technician or
electronics expert without technical competence, though you can be an
operator (but that's only one out of three categories identified).
Only the "international goodwill" clause is neither explicit nor
implicit about technical competence. So at least 40% and as much as
80% can be said to deal with technical competence.

2) Ham "games" and "contests" are a poor example of fostering
international goodwill. We learn nothing of other people or vice
versa in such activities. International "health and welfare" and
friendly rag-chewing are much better examples.

3) My message had much less to do with supporting a technical
interpretation of 97.1 as it had to do with not throwing out
97.1 because the poster stated he had his own personal reasons
for becoming a ham and wished to deny any pertinence to his
activities.

Hello All, I had posted this a couple of weeks ago and got a number of replys. The deal I thought I had fell through, so here is the posting again. You can see a picture of most of the equipment (and me too) on the cover of 73 Amateur Radio Today magaizine, September 1996.

All equipment is good to very good conditon, and all is working FB. All goes as a package only ...

SB-102 Transciever w/ 400 Hz CW filter
SB-600 SPEAKER
SB-610 MONITOR SCOPE
SB-620 SPECTRUM ANYLIZER SCOPE
SB-630 STATION CONSOLE
SB-640 REMOTE (LMO) VFO
SB-650 FREQ DISPLAY
HM-102 WATT METER
HD-3030 RTTY TU UNIT
HD-3006 RTTY 'CROSS-FIRE' TUNER
HD-1481 REMOTE COAX SWITCH
HP-23B POWER SUPPLY
HP-13B MOBILE POWER SUPPLY (NEVER TIRED THIS ONE OUT)
SBA-100-1 MOBILE MOUTING UNIT

QTH is Western New York, and would prefer pickup, so as to demo and save on shipping costs and hassels. Will ship however, if interested. Asking $650.00 U.S. (plus any shipping) as a complete package. If interested please contact Shane, WB2WPM, sbrady@pce.net. Or evenings (EST) at (716) 675-5797 ...

73, Shane WB2WPM

Well done.
Hams suffer from the "I" disease.
I did this.
I did that.
I worked this country, I bought that rig, I got my Extra, I am going to work the contest, I put up a 30 element 20 meter beam, I visited W1AW I work at.....etc etc etc. The only time they say "we" is when they really mean "I."

In a contact see if a ham E V E R asks YOU about Y O U .

I don't think there are any motels within walking distance. The nearest
I've seen are about 4 miles away along rte 75. For some that's walking
distance for others, not. There may be 1 or 2 slightly closer (2-3
miles) but I doubt they've got any vacancies. Most attendees make their
next years reservations as they are checking out

Good Luck

It is illegal here in the US to operate a ham radio, CB, scanner, other radio transceiver on a commercial flight. The reason is that the pilots are afraid that spurious signals from the transmitter or even the small amount of RF energy produced by receiver circuits could interfere with sensitive navigation equipment on commercial airliners. However, private airplanes do not have this restriction. The only restriction to private airplanes is you need to have the permission of the pilot. I also have talked to "aeronautical mobile" stations before and their range is at least twice the range of regular mobile stations.

Antenna Specialists make excellent antennas. However, 140$ does seem a
little strong!

> Obviously, since the aerial is the most important part I want to get the
> best, but I don't want some huge aerial sticking high up on my car.
> What can you suggest?

I would suggest something along the lines or a K40 or Wilson 1000. The
quality is acceptable and you should be able to snatch one for much less
than 140$.

A 102" whip mounted on one of the back corners of the truck seems to be
pretty hip around these parts. however, you'll get better overall
performance from a whip like the above-noted mounted in the center of
your roof. For best performance, you really have to drill a hole in the
roof and mount the antenna permanently. You may not like this idea but
let's face it, when you go to sell the truck a small bucket of bondo and
some touch up paint will completely conceal it. Either that or just
shove in a hole plug and hope for a short buyer. <G>

If you are concerned with being heard, you could install an outboard
power amplifier to the rig. Bear in mind this is illegal. However, the
noise is often so thick on CB that you need more than 4 watts to "make
the trip".

Cheers!

We have a reciprocal agreement with Mexico for third-party traffic, but you will need to go to Mexico physically to arrange for an operating license and callsign there. The ARRL can send you all the details; Gordon West also has some good information on the matter. Basically it involves going to Tijuana and taking care of the paperwork and fees in person.

... Typical Carl BS. If you can't attack the message, hurl personal
insults at the poster.

>But you need SYSTEMS that can handle the traffic, survive the disaster,
>etc ... that's where the techies come in and are necessary ...

Hams rarely, if even, provide "systems" in emergency situations,
other than setting up their "shack in a box" to pass H&W traffic or
a "shack on a belt" to aid in tactical communications. All state and
local EMA organizations keep backup transmitters, backup antennas,
and other equipment handy. Those too poor to provide their own backup
equipment work with other local agencies to "piggyback" communications
off that agency's systems.

>that's simply a rationalization/tacit_acceptance_of the perversion that's
>taken place ... those who believe that ham radio's primary purpose is

>for collecting 10-10 numbers or other inane pursuits are not the type of
>hams we need ...

I know that you'll find this difficult to understand, but at one point,
collecting a WAS award was an accomplishment. Years ago, before the
overcommercialization of equipment in the hobby like today, amateurs
had to rely on their own technical skills to design a shack which
gave them the capability to operate and achieve the award.

Today, with commercial gear and "from-box-to-sky" complete-tower
package solutions, coupled with various award "nets" on the bands,
these awards have less meaning today. The intent is still there,
and is good for the hobby, but has been lost in today's implementation.

>I agree that we need to enlarge our numbers, but to do so with
>the types of people who will do nothing to fullfill our purpose will
>do NOTHING to save our bands ...

... and just think, for over half a decade we've had an amateur
license with no code test available for all these people, giving them
access to all that spectrum in dire need of protection...

>> The No-Code Tech has, IMO, already attracted about all the techie
>> types we're going to get. Eliminate CW entirely, and you'll get a few
>> more, but not enough to change the ratio of techies to Appliance Ops.
>> In fact, I'd guess that you'd get far more App Ops than Techies with

>
>We're NOT just talking about removing the code test, but of restructuring
>the entire license system to eliminate the code-based caste system
>and to assure that even the entry level folks have a reasonable level
>of technical savy ... not EE level, but more than the average ignorant
>appliance operator ...

The first poster was dead on. Most holders of higher license classes
have them for the operating privileges. Eliminating the "code-based caste
system" entirely will have little overall effect on the hobby, except to
allow all the existing codeless techs immediate access to HF and perhaps
create a short-term upward spike in the number of new applicants who want
an amateur license for HF purposes w/o code and couldn't get one before. It
won't, however, change anything else about the mindset or current
community that is amateur radio today.

3756. Alpha Amps - New Alpha/Power (ETO) Web Site...

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-25 00:00:00 UTC
From: sandy@sandy.com
Message-ID: <5m8k28$9vr@surf.com>
Source record: 197592

You're invited to "See The Quality, Feel The Power"
of the latest Alpha Linear amplifiers at Alpha's
new web site:

http://www.alpha-power-inc.com

For additional information about Alpha amps,
please contact Scott Ehrhorn at:

Tel: (970) 535-4173
Fax: (970) 535-0281
Email: sales@alpha-power-inc.com

Alpha/Power was founded more than a quarter century
ago as ETO (Ehrhorn Technological Operations) to
design and manufacture the best possible maximum-
legal-power, continuous heavy duty, HF linear
amplifier for radio amateurs.

Alpha/Power (ETO) amplifiers contributed to the
expressions brick-on-the-key, maximum legal-power
and all modes, no time limit to the lexicon of
amateur radio. They pioneered the no-compromise
desk top amplifier, hands-off no-tune-up operation,
full break-in (QSK), standard 160 mater coverage,
and microprocessor-controlled automatic bandswitching,
tuneup and remote control.

Alpha/Power (ETO) also has pioneered realistic buyer
protection with long term limited warranties (never
prorated and now an unequaled four years), and the
money-back guarantee.

Please respond directly to Alpha, NOT to me! Thanks.

It's not a bug, it's a feature! This greatly enhances the effectiveness of
the
emergency spark gap transmitter. Instead of waiting 6 months for the local
FCC field office to write you a pink slip for interference, you now have a
hope
that some fire lookout might spot the smoke.

It had very much to do with what your wrote. My point was along
the principles of "you can't be a little bit pregnant". You can't
ignore a piece of part 97, of which 97.1 is such a piece, and
still claim to be fulfilling the *responsibilities* which were
concomitant with the exercise of ham radio *privileges* for "fun"
and "hobby" functions.

So many people say, "it's just a hobby". No where in part 97 does
the FCC say the service was chartered as a hobby. The service
was chartered for the reasons stated in 97.1 and declaring those
purposes to be moot, because *you* consider it "just a hobby", is
a selective declaration of what you choose to fulfill in part 97.
If you demand the "privilege" of selective interpretation for
yourself, then there is no reason why someone else shouldn't demand
the "privilege" of interference or illegal power output.

Pretty much. You can lead a ham to knowledge, but you can't make him
think. Or something. You can't make him support (with money,
time,and effort) something he doesn't care to support, either.

>> your level of knowledge and common sense in your area ...

Some folks lose sight of the fact that ham radio is supposed to be
fun, and that some folks find things fun that others find boring,
stupid, or wasteful of resources. If we get exclusive instead of
inclusive, we lose ALL of the hobby. That's what folks like Carl seem
to refuse to admit. I don't like a lot of what goes on in ham radio,
either. So, I don't do those things. I avoid areas where they're
done. Simple concept, isn't it? 99% or more of our bands are unused,
so there's plenty of place to play for everybody, with room for at
least ten times as many as we have right now, without even inventing
much new technology.

>community that is amateur radio today.

Right on. The major push behind elimination or reduction of CW right
now is the big manufacturers, who need to sell high end HF rigs to
make a profit. There's not much profit in selling cut-rate handheld
and mobile FM rigs to folks who don't need to trade them in every year
or two just to get the latest bells and whistles. I have an IC-290A
that I bought in 1982 that works better than any new rig I've seen.
I've had it working packet now for many years, and it hasn't missed a
beat. It's big enough not to need a stinkin' fan to keep cool,
either.

Hundreds of techs that were not motivated enough to take a simple code test, or even get a no-code ticket? Pardon me, but I believe that anyone that indifferent to the hobby would not make all that good a ham anyway.

>> It
>> can't really GET much easier without eliminating the tests completely.

In your haste to dis me, you failed once again to read what I said. I submit that the test is already so easy that it's no practical limit to anyone who wants to get an entry level ticket, and even an Advanced only requires some dedicated practice.

>> I finally
>> figured out that I don't need the monetary support of users to enjoy

Ham radio is not a store, it's a pot luck picnic. Bring what you can,
and share what others have brought. Or stay at home and pig out, if
that's what turns your crank.

> up nodes before you became a ham ...

Interesting that you don't know enough about the call sign system to
take a guess at how long I've been licensed. I've been a ham for 21
years. All but the last couple of those years, I've been extremely
active in setting up repeaters, remote bases, packet systems, and
several other similar projects, including helping to start the largest
and best repeater club in Idaho, installing what's probably the
longest running solar powered machine in the country, if not the
world.

>> I'm telling you that 1200
>> baud can handle far more data than is currently being done (with 1200

>
>BFD ... it's still too slow to handle the kind of traffic that needs to be
>moved
>(unless you're *way* out "in the sticks.")

"Sticks" is relative. If you live in a large city, you have far more
resources than those of us in the sticks, so it all evens out. From
what I've seen in the past, the "sticks" did a hell of a lot better
job of setting up a usable packet system than some of the big cities.

>> Nonsense. Your elitist attitude is a big part of the problem in ham

>

>No, that's NOT what we're talking about doing ... the intent is not
>to "erect barriers" but rather to "re-emphasize the real purpose of
>ham radio" and to assure its survival into the coming century ...

Yadayadayada. You're still on the soapbox, preaching your version of Ham Religion. You obviously aren't interested in constructive discussion of viable, workable, practical solutions based on the reality of how people think and act, rather than your idealized vision of a return to a mythical glorious ham radio that never existed except in the minds of those with faulty memories.

> Peter
>
>
Well Peter, you have a real dilemma on your hands. The best mobile antenna
for CB would be a 9 foot whip mounted on the roof. Anything else is a
compromise. Some people mount this stainless steel whip on their back
bumper to reduce the overall highth. The Wilson K-40 antenna is a good
choice as it is shorter but still very effective. Of course you can use a
shorter antenna and a small (25-50W) R.F. amplifier to make up for the loss
of transmit range. Do not go overboard on the amp as you can not talk to
someone you cannot hear. Good luck in your quest for the ultimate signal
from your mobile. Let us know what you come up with as we mobilers are
always looking for a better antenna.

I believe after the INITIAL charge - you had better go slow.

My gel cel says max 1.75 amps after first charge.

I would just find a good "wall toad" you know those little
transformers that all ht's come with, that is rated at 12v and
anywhere up to 1.0 amps, and hook it up for a while. Monitor with
Volt meter like you said.

Good luck

Dave

Keep in mind that the longer the antenna (up to quarter wave), the better
it radiates. Those small heavily loaded jobs are pretty good dummy loads.
The stainless whip is the cheapest and usually best. $140 seems pretty
pricey. Gud luck. 73's W1DB

I don't know about you folks, but WE had a great time.

The wx was great. The only R*** was late Sunday, and well-forecast; we were on the road by then. Friday AM was chilly but who cares? Saturday and Sunday were both SPF-30 days.

The bargains were there. I bought a gaggle of SCSI cables and adapters I needed, found power supplies and time delays, and you name it. Others bought fax machines, 100baseT switches, and antennas. Even got an ATT NT1 for $2.00!

As usual, The Committee had everything organized. You might not like ALL the procedures they set, but you have to admit for a 99.999% volunteer-run effort, it's second to none. I watched with quiet smile, as some $35K Goshmobile was efficiently towed out. The owner clearly thought [s]he could just park in anyone's flea market spot with impunity. Surprise. The only surprise was they moved the Sat/Sun flea market opening back to 0700 from 0600. We got there at 0515, opened the booth and thought we were in "On the Beach" or such.

So what did other r.r.a.m attendee think? What are your bravos & brickbats?

Sign me "Only 362 days til next year..."

3771. Two Great QRP Lists

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-25 00:00:00 UTC
From: bry@mnsinc.com
Message-ID: <338842d2.3043064@news.mnsinc.com>
Source record: 197607
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc,uk.radio.amateur

I have found two Great QRP E-MAIL lists!

The first is KNIGHT LIGHTS QRP - a group that started in North Carolina, but they allow folks all over to join in on the fun.

To subscribe:

You can send mail to "majordomo@acpub.duke.edu" with the following command in the body of your email message:

subscribe klqrp

Here's the general information on KLQRP:

The KLQRP list is for discussion of activities like technical projects, special operating events like Field Day or expeditions to the NC Lighthouse locations, get-togethers like meetings at member's houses, events like the hamfests, or other special events.

Here is a bit of philosophy from the list manager (Dave, WA4NID). Let me say that I do NOT plan to be a list policeman, in the sense of regulating or moderating the topics of discussion. Everyone is urged to freely post to these lists and suggest topics for consideration. It is hoped that the lists can become one mode of communication for KnightLite members and other interested hams, which encourages camaraderie and progress in amateur radio pursuits of all types. I hope that people will use these lists to keep in touch with the group as a whole, and to arrange meetings with specific members, and to discuss any QRP or radio-related ideas or plans.

==========

The next is probably the BEST QRP list in the world! G-QRP, where you can meet up with the likes of George Dobbs and the boys that STARTED the current wave of interest in QRP, long ago!

To subscribe:

list, you can send mail to "Majordomo@blacksheep.org" with the following command in the body of your email message:

unsubscribe gqrp-l bry@mnsinc.com

Here's the general information for the list you've subscribed to, in case you don't already have it:

Welcome to the GQRP-L mailing list!

This is the informational file for the G-QRP mailing list.

The gqrp-l mailing list was founded by members of the G-QRP club as a focus of QRP activity for QRP operators who have access to the Internet in the UK, and further afield.

The list exists for the discussion of technical matters, QRP operating, QRP events and other QRP-related topics. It is intended to be UK orientated and in this respect is not intended to replace the existing QRP mailing list at netcom.com.

There is a simple but strict editorial policy to keep this list a QRP mailing list, not for it to replace uk.radio.amateur, the rec.radio news groups or any other general discussion forum about amateur radio.

How to join the GQRP mailing list:

send mail to "Majordomo@blacksheep.org" with the following command in the body of your email message:

subscribe gqrp-l

How to leave the mailing list:

send mail to "Majordomo@blacksheep.org" with the following command in the body of your email message:

unsubscribe gqrp-l

How to send mail to the list:

send your mail to "gqrp-l@blacksheep.org"

your mail will then be sent to everyone on the list.

How to receive the daily digests:

If you'd rather not receive each individual message, but would like a bulk mail file sent daily containging all that day's messages to the list, then :

send mail to "Majordomo@blacksheep.org" with the following command in the body of your email

message:

subscribe gqrp-l-digest

Remember that this is instead of receiving the
individual messages, so you don't need to subscribe
to gqrp-l as well.

To stop receiving the digests:

send mail to "Majordomo@blacksheep.org" with the
following command in the body of your email
message:

unsubscribe gqrp-l-digest

Rules on use of the list:

Very simply, please bear these in mind when sending
mail to the list

1. No profanities please, this list may be copied
to packet-radio BBS sites.

2. Messages should be of direct interest to QRP
operators. eg:

a. Technical remarks and discussions relating
to QRP equipment

b. Discussions about QRP operating

c. Announcements of contests, QSO parties etc
d. Discussion of operating achievements
e. Anything else which might be of interest to QRP
operators.

3. Please do not over-quote when replying, most
people on the list pay for their connection to the internet.

4. Whenever possible, reply direct to the sender
rather than the list.

5. Requests sent to the list to unsubscribe from
the list will be ignored! Send these requests to
majordomo@blacksheep.org (see above)

Archives of the list

The list archives can be browsed on the World
Wide Web - point your browser at
http://www.blacksheep.org:8080/gqrp-l/index.html

What are you guys complaining about? If we have more time till the launch date
then we should take that opportunity to make the sat more efficient, robust and
test it till it is flawless. More work = more money. If we can't get more money
then I guess we could always store it in a ham's garage for free till the launch.
Does it matter if AMSAT is broke? Amateurs have always managed to build things on
a flee's budjet, good on them :)

Paul, VK2THN.

When my 580's "on the air" blinks it means PLL is not locked. A
cure for mine is I turn it on and off and it locks. This was a
problem in earlier units. In fact my first one did this all the
time and I exchanged it for a new unit at that time. Unfortunately,
if the unit is out of warrantee the replacement board is not cheap.
Alinco at one time was repairing them for free (so they told me).
I'd give Alinco a call and bitch nicely to them. Who know's, maybe
they will do something for you.
Good luck, Mark N2FLF

Just press and hold the 0 key while turning on the radio. First, choose a clear 70 cm and set the PTT to this. When the radio powers up the display will read "CLONE". Do this with a second radio and whichever one you press the PTT on will download it's memory to the other. Be sure both radios are configured for the same number of channels. It may not work well if you have the ME-1 installed in one and not the other. Also, and to my disappointment, it will not clone the alphanumeric messages.

Its still quite a nice feature and it does work. I just recently cloned a second-hand 78A for my wife. I have also used the clone feature of our 732A's.

Good luck, 73, Rick/N3BUT

allow everything [every bands] to non-code operators with a
restriction that they cannot use CW.

To use CW in any bands, the FCC / DOC should ask operators to take CW
test.

This is much reasonable and simple, isn't it ?

The Technocrats in amateur radio seem to forget that a major part of
amateur radio, as defined in 97.1, have to do with NON-technical
matters. Only 40% of 97.1 deal with technical issues. 60% deal with
communications-oriented matters. Section (e) deals with enhancing
international goodwill. "Games" and "Contests" are one way of doing
that, and we've been doing it for years, not only in amateur radio
but also in other ways -- like the Olympics, internation chess matches,
etc.

On the contrary it's been a great success, to the limits of its attractiveness.
But it didn't and doesn't go far enough ... too many are unwilling to suffer
the
indignity of the hazing ritual in exchange for priveleges for which they're
already
well qualified.

> >The problem is that the "average user" is too technically deficient to

That statment shows your complete lack of understanding Mike.
For far less than the cost of some archaic architecture 3-4 conversion
rice-box spur garden, one could have far more powerful communications
capabilities with modern technologies ...

> You fail to comprehend (or, refuse to) that many people like working
> with the 'technology' they have because it works, its simple, and it
> meets their needs.

"Buy a pickup truck, you say? What for? Olde Bessie can still pull the
wagon into town in half a day. And there's still plenty of oats and hay
available at the local feed store. Why the hell would I want or need to
buy a pickup truck???"

Mike, you're just a mule sort of guy (in more than one way) in a
pickup truck world.

> > your level of knowledge and common sense in your area ...

> local EMA organizations keep backup transmitters, backup antennas,
> and other equipment handy. Those too poor to provide their own backup
> equipment work with other local agencies to "piggyback" communications
> off that agency's systems.

Tell that to CAL-OES ... to whom our organization in SoCal provided them
with wide-area multi-mountaintop UHF coverage throughout approximately the
southern third of the state, all from hard shelters with both battery backup
and
automatic generator systems. The same sites also housed a series of
packet nodes, which provided the same sort of coverage, plus links to systems
outside of the area.

Well-organized, well-planned ham operations/organizations DO provide "systems"
in emergency situations ... otherwise, they're simply a bunch of HT-toting
public
safety wannabes (I believe that's *MD's* term) ... unprepared to do much useful
and more often than not, simply "in the way."

> >an abject failure at getting technical people into the hobby?
>
> Evidently not, since he keeps avoiding the subject.

I have NOT "avoided the subject" ... I have asserted that MD is absolutely
incorrect. I have further asserted that while the no-code tech has in some
ways been a smashing success (it's now the most popular method of
entry into ham radio) it did not and has not done enough because it didn't
go far enough in modernizing our licensing scheme ...

> Pretty much. You can lead a ham to knowledge, but you can't make him
> think. Or something. You can't make him support (with money,
> time,and effort) something he doesn't care to support, either.

The problem is that the curent system rewards stagnation and sloth.
It actively seeks to stack the deck against those who would promote
progress, learning, and modernization in the interest of preserving the
status quo for the incumbent fossils ... (MD has apparently himself to
the rank, title, and position of "one of the more vocal fossils.")

> Right on. The major push behind elimination or reduction of CW right
> now is the big manufacturers, who need to sell high end HF rigs to
> make a profit.

This is an absurd accusation ... I certainly don't have, nor am I aware of
a SINGLE individual who's been involved in the discussion here supporting
the elimination of code testing and restructuring/modernization of our
licensing system who has, ANY affiliation with or interest in any of the
"big manufacturers" ... (or even the little ones) ... this is pure bullshit,
designed just to raise the false spectre of "conspiracy" since MD and

the others have NO rational argument against those proposals ...

Dear Sir.
Our Company in Taiwan.
AWT Communications Accessories
Are Professional Producer of The OEM/ODM
Communications Product.We are Producing The :
CB / VHF / UHF / 900Mhz RF Linear Amplifier!
Full Duplex GSM Cellular Phone Repeaters Amplifier!
SWR/Power Meter, VHF/UHF Antenna. Antenna Tuner!
Antenna Switch, Switching Power Supply etc*.
Our Product Have OEM / ODM To Japan & USA !
These are the popular & OEM machine of our product.
AWT-144H (Same Daiwa LA-2035R. & MFJ Mirage B-34-G)
AWT-2090H (Same Daiwa LA-2080HK.)
AWT-3090H (Same Daiwa LA-2090HK. & MFJ Mirage B-310-G)
(Special to Design Great For ICOM IC-706)
AWT-160VH(Same Tokyo HY-Power HL-160V/25.MFJ Mirage B-2560-G)
AWT-200VH(Same Daiwa LA-2190HK. & MFJ Mirage B-2520-G)
AWT-268DH(VHF/UHF DualBand Same MFJ Mirage BD-35)
We Hope We Can Do The Business With You.

If You have any need. Please Contact with us.
We Will Provide The Best Quality & Best Price To You.

Hello.

I was wondering if you would know any information regarding to CB /
ham radio in the sky.

Are we [people in the states / Canada] allowed to transmit any signals
while we are in the airplane etc. ? Airplane = mobile ?

I know we are allowed to scan in the sky, but I am not sure about
transmitting... hams in MIR do... maybe we can do the same thing,
can't we ?

Thanks in advance :)

> anyone that indifferent to the hobby would not make all that good a
> ham anyway.

Being disinterested in/unwilling to submit one's self to the code hazing
ritual does NOT automatically indicate that one is "indifferent" to ham
radio ... it's just that ham radio has gone out of its way to try to make
itself unattractive and painful to enter for anyone with more intelligence
than the bare minimum required to learn to beep ...

If, for example, the local medical association required all neurosurgeons
moving into the area to successfully complete a day-long session in
"advanced bedpan cleaning and disposal" don't you think that any
neurosurgeon considering a move to the area would think twice???
Would they be unreasonable in protesting this obvious hazing ritual as
irrelevant, since cleaning bedpans is not a normal part of their professional
duties? How do you think these otherwise fully-qualified neurosurgeons would
react to being told that they were "lazy, elitist, not-worth-of-their-license"
etc.?

This is a PERFECT parallel to that of the hundreds of technical folks that I
have worked with over the years who were interested in ham radio and fully
qualified, but unwilling to "clean bedpans in Newington."

> >Red Herring Alert!!! The anti-code-TEST crowd has consistently supported
> >making the written tests better ... nobody's suggesting making it "easier"

> >per se, just making it more relevant and justifiable.
>
> In your haste to dis me, you failed once again to read what I said.

FIrst ... I feel no sense of urgency WRT "dising" you ... you present abundant opportunities though your inability to make a coherent argument for your case ... all you do is throw out red herrings like the one above ... falsehoods (or half-truths) designed to divert attention from your lack of a logical foundation and to promote unreasoned fear in the minds of those whom you seek to incite.

> submit that the test is already so easy that it's no practical limit
> to anyone who wants to get an entry level ticket, and even an Advanced
> only requires some dedicated practice.

All of the VE statistics that I've seen posted here indicate a shockingly high rate of failure ... but don't let the facts confuse you ...

> >"Enjoying" and "being able to afford to fund" putting network resources
> >in place for others to use are 2 different things ...
>
> It's still a copout to blame others for not supporting YOUR enjoyment
> of the hobby.

The point is that it's NOT for MY enjoyment ... at least not exclusively. Putting up network resources is something that should be funded in a shared manner by ALL of the users ... not just the technical folks who also expend the sweat and elbow grease to get the job done. What I'm railing on are the users who use the resources, never contribute a freaking cent to the construction or maintenance of the network, them have the balls to call up a sysop in the middle of the night, effectively demanding that he "drag his lazy ass out of bed and go up to the hill and fix the f___ing node." Those are the ignorant, lazy, cheapskate bastards to whom I was referring before ... they exist in significant numbers, and I stand by my characterization them ...

> >People who want to wander the store eating their fill and never
> >taking anything to the checkout counter to pay for it are not
> >"customers" ... they are "shoplifters" ... aka "selfish, ignorant
> >bastards" IMHO ...
>
> Ham radio is not a store, it's a pot luck picnic. Bring what you can,
> and share what others have brought. Or stay at home and pig out, if
> that's what turns your crank.

You're suggesting that those of us who are interested enough put up our own network resources and then "lock out" the cheapskates who weren't interested enough to contribute to the building of the resource?

Boy, I can hear the lazy cheapskates screaming and bitching about that one already!

That's a lot like "private, closed" repeater systems ... while I support the
right of any licensee to control access to and use of his equipment, the
channels are a different story ...

> take a guess at how long I've been licensed.

Guesses are of little use ... people move, callsigns change, you can't
tell much for sure from a callsign ...

[snipped the remainder of your ranting]

I give up Glen ... no amount of reason seems capable of evoking
anything much more eloquent than a "bullshit" from you, so I'm not
going to waste any more time on trying to convince you of anything.

Enjoy yourself out in the sticks with your glorious 1200 baud system.
Just don't be surprised when there's nobody else to talk to because
you've woken up one day and found that the rest of the world has passed
you by while you were asleep ...

You can't legally use any amp on the CB band. Anything over 5 w is not
legal.

Gerry,

The only point that I was making was to point out the falacy
in the argument that "chasing DX" in the competitive games
sense is what the FCC had in mind when they wrote 97.1 ...
and that the bad manners exhibited by many of the practitioners
of that perversion of ham radio do more harm than good in terms
of "fostering international goodwill." Now international relief efforts
in times of need and other ham activities clearly do foster international
goodwill in meaningful ways, but rude operators trying to stomp
everyone else into oblivion does not, IMHO.

MD continues to insist on erecting a strawman that claims that
all sections of 97.1 are linearly equal. This is, of course an absurd
assertion, but MD has never balked at foisting absurd assertions
on us in the past, so why should now be any different?

> Section (e) deals with enhancing
> international goodwill. "Games" and "Contests" are one way of doing
> that, and we've been doing it for years, not only in amateur radio
> but also in other ways -- like the Olympics, internation chess matches,
> etc.

Right, and another way to "foster international good will" would be to
send "Mr. T" and "the American Gladiators" over there to kick their butts
a few times, right? That's about the same as getting stomped into
oblivion by some obnoxious "big-gun" DX contest station ...

Give your argument a rest, Mike ... it's old and it's tired and it's VERY
stupid.

>Prefix.
> 3) There is at MOST 1 (one) single digit Number in a Prefix.
> 4) NO suffix contains a number.

Number 2) and 3) are not correct, Dave.. Many countries, even the U.S., allow two or three numbers between the prefix and suffix. In the U.S., it has been allowed for special events (like the '200' numbers in 1976), and others use the second # to show license class (Belize uses V31 for full license, and V32 for their 'Novice' class).. Some just use 2 numbers all the time.

You might want to look at the .CTY files used by some of the contest logging programs, like 'CT'. Those lookup tables have been well tested for catching strange prefix combinations.. You can find a downloadable file with the latest CQ Contest and ARRL Contest .CTY (country) files at:

http://www.ve7tcp.ampr.org/Software/ct

There are files for contests sponsored by both organizations because the CQ rules allow some different places to count as 'countries'..

Hope this helps!

IF ANY ONE HAS INFORMATION OR COULD LEAD ME IN THE DIRECTION OF HELP I WOULD APPRECIATE IT. I WAS IN AN AUTOMOBILE ACCIDENT AND THE MICRO-PHONE CORD OF MY KENWOOD TM-241A WAS PULLED FROM THE RADIO. THE LOCAL DEALER CAN REPLACE THE END I NEED BUT THE TROUBLE IS FINDING OUT WHICH WIRE FROM THE MIC GOES WHERE? THE DEALER SEEMED MORE INTERESTED IN SELLING ME THE ENTIRE MIC! I OPENED UP THE MIC ONLY TO FIND THE WIRES GOING INTO A CIRCUIT BOARD WITH LITTLE OR NO LABELLING ON IT. THERE IS 8 LEADS ON THE RADIO, THE SCHEMATIC SHOWS ALL 8 BEING USED BUT ONLY 7 COMING FROM THE MIC? UNFORTUNELY THE SCHEMATIC IS OF THE RADIO END ONLY, NOTHING ON THE LAYOUT OF THE BOARD IN THE MIC. THE RADIO IS IN WORKING ORDER; A REPLACEMENT MIC IS ABOUT $70 AND THE COST OF THE PLUG IS ONLY ABOUT $6. IF ANYONE CAN GIVE MY ANY INFO I WOULD GREATLY APPRECIATE IT. PLEASE E-MAIL ME AT markjack@netrover.com

Thanks Mark (VE3-UCD)

Well Mike, if more people had insulted more Nazis in the 1930s, WWII might not have happened. IMO, any attempt to violate my first-ammendment rights should be met first with an insult and as a last resort, a Colt 45.

Probably the same thing it does with the phone numbers, reach you if there is a problem with your application. Since it's not a required piece of information, just like a phone number isn't, if you're worried about the FCC having the info, don't provide one. The FCC needs to know who you are, a mailing address to reach you, however I don't know of any intentional abuses by the FCC of privacy. I have no difficulty with the FCC knowing my email address, or my phone number, it's at least nominally listed and will be in the next phone book published.

greetings
1st i don't live in an apartment so my suggestion may be somewhat
nieve. you might consider asking your super if you have install a
flag on your balcony. if he agrees then use the flag pole as a loaded
wip, like a car mobile.
also, consider trying to operate the below 30 mhz bands rather than
staying on vhf/uhf.
i am a canadian so prices are too different to offer equipment
suggestions, however consider looking for amateur radio dealer website
to make contacts with dealers who can offer suggestions in terms of
equipment.
i realise this information might not be relivent enough but i just
wanted to give you some information. something to think about

This is quite common among persons who passionately hold a certain belief. They think that they're right, everyone else is wrong, and they've got the perfect answer to every argument you present against them...as long as you argue on *their* terms. A sort of "don't do as I do, do as I say" mentality.

My congratulations also to you Mike. to go from 0 to the top with 1 massive test obviously took a great deal of time and effort. I recall some of the finest dx I ever worked was on cw. I got my first novice ticket in 1971, and I still recall my first contact on cw, but I also believe that some aspects of this hobby should not be contingent on cw proficiency. My wife, in fact, is a technician, and although her operating privileges are limited, she thoroughly enjoys that particular aspect of amateur radio that is available to her. I guess I feel that incentive licensing should be retained so persons who want to take the time and make the effort will still be able to do so.

well once when visiting a friend's house, he was watching CNN when they lost
something or other with some kind of link. A repeating cw message came on
with a blank screen. I was able to copy an 800 number out of a long id
message not unlike an id sent by a commercial ship station. My friend called
up the 800 number and complained about loosing the auto race he was watching.
the astounded technician asked where he got the 800 number and he said that a
friend of his had coppied the cw id with the info in it.
How's that for strange?

For one thing, it's atrocious English. For another, it's ridiculous,
unnecessary jargon. I'm just as contemptuous of those idiots who say
"destinated," say "hi hi" on FM, type "es" instead of "and" on packet,
and all the other silly things that hams say and do that are just as
inane as the worst of what you hear on CB.

It's no wonder that people see hams as a bunch of idiots when we go
out of our way to act like idiots.

Nope. My point had to do with "esprit de corps," satisfaction in a
job well done, value of something worked for rather than handed on a
platter, and etc. I said nothing about any popularity contest, or the
appropriateness of licensing requirements. Here it is again for
reference:

>> If you've been in the military, you know the esprit de

>The point that I have been trying to make is that the "its' JUST a hobby"
>line is false ... it's a service. And the fact that something is "fun" to

No, it's not false. It's a hobby with service aspects. I never found
anybody who got into ham radio because of the service aspect, unless
that was what he found to be fun. One does a hobby because he enjoys
it. That's the definition of a hobby, and ham radio fits the
description perfectly.

>even a large number of current licensees does NOT mean that it is
>"meeting our chartered purpose" in any way ...

The purpose of ham radio is whatever you wish it to be, within the
rules. You can get into ham radio to make phone patches to the wife,
or to call for pizza under today's rules. We may not all like that
fact, but that doesn't change the reality of it in the slightest.

>Unfortunately, large numbers of people with the "it's JUST a hobby" mindset

>I read it, I believed every last word I saw ...

The Declaration of Independence was a brilliant and well-written
screed against King George. It was designed to incite the populace in
the treasonous act of overthrowing the existing government. Once the
battle was won, the FFs didn't try to run the new country with the
Declaration, they wrote a Constitution and Bill of Rights to do that.

>> Part 97.1 was written a LONG time ago, and it can be
>> interpreted in many different ways, depending on who's grinding what

>
>I didn't say they were unfriendly, rude, or unhelpful ... just that the
>practice of "collecting 10-10 numbers" is inane (idiotic, pointless,
>has no sense ...)

No, it is not. At least it wasn't in the beginning. I wasn't there
when the club started, but I was able to talk to most of the original
founders, and I assure you, your impressions of the club are mistaken.

>> They served
>> a valuable purpose, too, keeping ten meters occupied with real
>> activity during sunspot minimums. To say that the activities of the
>> Ten-X club "wasted valuable spectrum" is pure sophistry, and I'd LOVE
>> to see you attempt to justify it.
>
>Creating artificial, pointless activity is not my idea of "real activity" or "a
>valuable purpose" ...

I don't think that attempting to save ten meters from the fate of
eleven meters qualifies as an "artificial, pointless activity." What
you think has no bearing on the truth of the matter.

>> I suppose it's possible that the club has deteriorated in quality in
>> recent years, but that's no reason to badmouth the whole operation.
>
>The whole operation was oriented around collecting as many "10-10 numbers"
>as possible and asking *everyone* one came across "what's your 10-10 number"

No, it was not. Even in the semi-annual contests, folks took the time
to chat, and non-members were welcomed. Besides, in sunspot minimums,
there would have been little or no activity without the club.

>This caused people to have to "join the club" to obtain a 10-10 number if they
>wanted to talk to anyone, since large numbers of people on 10m were primarily
>interested in a quick contact to "score another 10-10 number." ... I have

Pure, unadulterated nonsense. I admit it may appear that way now, but
I can assure you that such behavior was extremely rare when I was
active in the club. The band was full of ten-ten folks having fun
chatting, and non-members were welcome and invited to join in. Nobody
was shunned because he had no number, unless he had an attitude like
you seem to have. And those who were primarily searching for new
numbers called "CQ 10-10," so you could avoid those if you wished.
Without the Ten-X club, ten would have been dead much of the time, and
you would have had no one to talk to anyway.

>actually
>had people tell me, "if you don't have a 10-10 number, why did you bother to
>say hello?"

That may be common now, but it never happened before novice
enhancement.

>This "whole operation" makes hams look like a bunch of mindless idiots,
>running around with some sort of ridiculous radio cult equivalent of "official
>propeller beanies and secret handshakes" or some such nonsense ...

No more than your obsession with CW, techies, and "beepers" does to
you.

>> You have this annoying habit of looking down your nose at any ham who
>> doesn't fit into your narrow view of what's "proper."
>
>I view it as simply looking at ham radio through the eyes of a rational adult,

FCC regs provide 5 reasons for ham radio, with the understanding
that no one is to be drafted into the service of one's fellow fools
by way of radio trechnology. Not this one, anyway. SO, the feds
accept that the hams will mostly be a waste, and when there is great
need, those precious few, those brave souls, those who had fun
and are willing to pay for it, they will come forth and serve.

As on Terrible Tuesday in TX. At that time, some of the best service
was given by the contesters who could send details in an extremely
short package and keep at it till they keeled over. Some did.

For the most part, they only sent short packages of numbers.

Some of this was CW, some was TTY, some was voice.

There have been many other ways that the "hobby" part of ham radio has

come to the aid of the public in time of need.

Please try to be patient. Your methods at this stage of your
development would probably drive away just those who are most needed.

Does the possibility of a ruptured fuel line mean we should abandon
learning?

I believe this is one of those loaded posts, which do ont allow
for any but the view of the poster. (Poster: funny pic on cheap paper)

I wrote an article for a survival mag, that showed exactly how to do
just that: change your car into a transmitter.

It involved using a buzzer, a horn relay, and the wire from the HT
coil. The horn button would then be a code key.

I pointed out that the learning that would be required to do this
would justify a little more work and get a ham license.

The mag did not accept the article, but the method was ridiculously
simple.

Of course, you need to be aboeto send code.

ciao, in case you don't know what 73 means.

OK ... this is a bunch of crap ... it is not the government's place to
either insure that one struggles by any amount ... only to determine
if they are or are not qualified under a reasonable, rational set if test
criteria ...

Now I know why I skipped over the "esprit de corps" stuff before
... it's irrelevant.

Dang Michael, another contradiction. Is there room for Len Winkler's
WOGs? Or is there room only for everyone who passes the hazing ritual?

> 120V output with this 100 watt amplifier?
P = I * V.

From Ohm's law, I = V / R. Substituting to get P in terms of V and R,
gives

P = V**2 / R.

Multiplying both sides by R / P,

R = V**2 / P.

Plugging in the numbers, R = 120 * 120 / 100 = 144 ohms.

> Can someone help me figure out what the impedance transformation ratio
> of such a transformer might be?

It is easily derived if you don't remember it.
See above formula, P = V**2 / Z

Ppri = (Vpri)**2 / Zpri ; Psec = (Vsec)**2 / Zsec.

Energy is conserved, power is energy per unit time, so the power in the
secondary is equal to the power in the primary. Therefore,

(Vpri)**2 / Zpri = (Vsec)**2 / Zsec.

Multiplying both sides by Zpri / (Vsec)**2 to rearrange, gives

(Vpri)**2 / (Vsec)**2 = Zpri / Z sec.

Taking the division inside the exponentiation,

Zpri / Zsec = (Vpri / Vsec)**2

Or in words, the impedance transformation ratio is the square of the
voltage transformation ratio.

Hope that this helps.

No technical skills are readily needed to set up commercial equipment.
You need some assembly skills for the antenna, the coax, the ground,
and hooking it all together. Putting up an amateur station today is
akin to hooking up a VCR to your television set.

>Everyone can read the words in 97.1 and reach their own score. I don't
>deny that operating skills are important and I certainly believe that
>technical skills are important. But I think you'll find few people
>that are as certain as you are that operating skills are exactly twice
>as important as technical skills.

I don't really feel that operating skills are twice as important as
technical skills, but I do feel that both are >equally< important to
the amateur service. I also feel that they can be complimentary (i.e.
you can work to improve both) or segregated (you can work to improve
only your 'technical' or 'operating' skills and not the other) depending
on what your interest is. My analysis is merely a reply to the
"if you're not technical you belong on CB radio" mentality that Carl
The Omniscient spews on a daily basis.

Hi

As Im going to have an inspection to my station I need to have my
radio transmitting only in the following frequencies:

1830-1850
3500-3800
7000-7100
10100-10150
14000-14350
18068-18168
21000-21450
24890-24990
28000-29700
All in KHz

What can I do to chnage my rig in order to trasmit only in these
frequencies?

Thank you very much, Andre Brandao,

3828. SWLs who need your help - Cumbre DX Book Project

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-26 00:00:00 UTC
From: ulis@ix.netcom.com
Message-ID: <5mcf6a$l5s@dfw-ixnews4.ix.netcom.com>
Source record: 197445

Thank you for taking the time to read this message.

Would you like to help out a Shortwave Listener in a developing country? You can by donating your last years edition of the World Radio TV Handbook or Passport to World Band Radio. In many countries these books are very difficult to obtain or very expensive.

Please look at the following URL for more info:

http://www.geocities.com/TheTropics/4819/book.html

This page will explain how the project works. Cumbre DX currently has 20 DXers who have requested a book that we have not been able to find a
donor. These countries include:

2 from Colombia
1 from Ecuador
1 from Nigeria
2 from Cuba
5 from India
3 from Argentina
1 from Trinidad
2 from Brazil
1 from Chile
1 from Mexico
1 from Honduras

The response this year has been excellent. Thanks to the publicity received from Glenn Hauser, Marie Lamb, and Kim Andrew Elliott on their radio programs. Last year Cumbre DX matched over 50 SWLers who requested books while this year we have had well over 160 requests with more requests arriving weekly.

Anyone interested in participating this project please let me know and I will email you the address of the SWL who has requested a book. You will be helping out a fellow SWL and who knows make a new friend along the way!

Just think for a moment what it was like when you did not have a reference book to listen with?

Your help would be appreciated.

73,

Ulis

I used both to learn code. SuperMorse is great to first learn the
basic letters. Use instructions and learn by "groups". AFter you
know your letters/numbers at 5wpm, switch to Morse Academy.
I like Morse Academy better than all others.

I used to have good luck with a 5/8 wave "Firestick" top loaded coil type- they've got them as short as 2 ft long, which work very well even at highway speeds with a 6 inch mag mount set- can get both of these at your friendly neighborhood truck stop for a total of about $20! Also works great as a scanner antenna.....but not so hot on 2 M!

Hello OM,
I am a Tech no-coder (4 yrs.) and I hope to learn the code one day, but I'm not learning it to work CW on HF because working DX on HF can be done on phone very easily. I have had several CW contacts via the computer on VHF/UHF, although none on HF because I'm restricted.There are thousands HFer's that can't copy 5 WPM. I have met many of them and they could care less about CW. They only learned (bought) it so they talk on HF not send/copy code. So why should it be requirement, it's not much of a filter for bad or under skilled operators. Turn your rig on a listen to 75M. Remember it's supposed to be a HOBBY. I forgot the license end is all POLITICAL.

I am not against CW it does serve a purpose (and I wish I knew CW) but as far requirements to use HF phone bands I can't see any purpose. Remember I'm just a No-Coder so what do I know, just ask the guys with higher class ticket. 73 de N8ZJN Kevin

>I refer you to Deja News ... one of the VEs posted some statistics recently.
>I don't remember the exact failure rate, but I do remember that it was
>"shockingly high" to me.

I did some work with a VE some years ago. There are two reasons for high
failure rates (in my own ancedotal evidence opinion):

1. There are a lot of stupid people out there. Yes, I'm being condescending.
I've met some real "winners" who show up at testing sessions. However,
almost every 'intelligent' person I've spoken to at a test session has
passed their examinations. Unfortunately, as you all know there are far
more "average" and "stupid" people than "smart" people. After all, 50%
of the US population has at-or-below-average intelligence. I've also found
that a higher failure rate tends to occur with older people who have
been out of school for a while (bad study habits) and people who do not
have a good educational background.

2. Almost every VE encourages people to take the next higher test once
they pass the test they came to take, even if they are not prepared for
it. Going to take your 5wpm code test? Take the 20 and 13wpm tests too,
since "you might pass". Taking the tech theory? When you pass, take the
General too. Heck, it don't cost any more money... These are the attitudes
that VEs present to people -- unprepared people usually fail exams, even
intelligent people.

Oh Carl, I'm more than willing to debate issues. However, your
holier-than-thou attitudes and condesending nature towards people who
do not measure up to your technical level of competence makes you
too juicy a target to pass up. Your attitude is an insult to the
hundreds of thousands of hams who, while perhaps are not the
more technical people in the world, contribute heavily to the world
of amateur radio with their operating skills. I know many people
like this; my father-in-law is one -- someone who served as a radioman
in WWII and to this day spends most of his free time passing traffic
for Navy MARS. He's not the most technical guy in the world, couldn't
design a radio with "current" technology if he wanted to (and at age 80
doesn't want to) but I daresay he has done more for public service and
ham radio than you have ever done. I take it as an extreme personal
insult when you disparage the reputation of amateurs like him just
because they do not measure up to your vision of what the "Master Race"
of amateur radio should be.

>That you believe and accept as fact that "the higher frequencies"
>will remain unused in the absence of appliance operator rice-boxes
>gives a clear view of your total lack of understanding of what ham

>it is expected that we'll tinker and experiment and create something
>useful there ... if we don't there will be no market opportunity for the
>rice boxes, because the bands will be reassigned to someone who
>WILL use them.

Yes Carl, and what you fail to understand is that in the "real world"
of amateur radio, outside those rose-colored engineering glasses,
is that a vast majority of amateurs today ARE appliance operators, and
will only migrate to higher bands once inexpensive commercial equipment
is available.

This is simply a fact of life you seem unwilling, or unable, to comprehend. I don't care what your "vision" of "how" we are supposed to "use those bands" is -- facts are facts. All you have to do is look at 440mhz as a prime example. 440 went unused for years by the majority of "amateurs" on VHF -- it was only after manufacturers started making commercial dual-band radios at a relatively inexpensive price did we see activity start to jump significantly. Activity is still nowhere near what it is on 2 meters, because a $400-$500 dual-band radio is still more expensive than an older 144mhz radio for $150.

>Your problem, Mike, is that to you everything in ham radio must
>be available at the store, just by plunking down your credit card.

If you want to build something yourself, Carl, more power to you. I don't have the time nor the inclination to do it myself. I'm much more involved in other activities which consume the small amount of time I dedicate to amateur radio.

>You're too incompetent and lazy to do anything but sit there and
>operate some appliance, and admit that you haven't a clue as to
>how to fix it if it breaks ...

So, now we're back at the personal insults Carl?

Do I repair my own radios? Nope. Last year, at field day, I had my FT900 die. I cracked the case, traced the circuit, and had it die in this big black piece of silicon with 50 different leads coming out of it, leading into dozens of other pieces of black silicon. Did I go any further? Nope. I packed it up, and shipped it back to Yaesu with a note. Know what Yaesu did? They replaced the whole board. Just popped it out and put another one in. Why? Its >EASIER<. In your mind, though, that Tech at Yaesu is no doubt lazy because he didn't break out his SMT equipment and merely replace the CPU. Could I have done it myself? Yeah, with the right equipment, the right reference material, and a little patience. But, heck, the equipment is still under warranty, so why bust my chops.

Oh, and by the way Carl, I noticed in another post of yours how you don't think it is the government's role to enforce a "work ethic" on anyone. Well, if this is the case, then certainly you are in no position to condemn those people who do not make or repair their own equipment just because their "work ethic" doesn't conform to what you think the government should make it.

>This assertion is yet another pro-code red herring ... there has never
>been anything posted here to indicate that any of the participants who
>favor elimination of the code hazing ritual have *anything* to do with or
>have been influenced in any way by "the big manufacturers" ... nor have
>I ever seen any statements by "the big manufacturers" to the effect that
>they support or encourage such rules changes ...

Of course, you conveniently ignore the entire incident at Dayton a few years back when many industry representatives started to propose the "slow code" initiative. Its a fairly well-known fact that amateur

companies are hurting fiscally. If you don't think that the "slow code"
proposition was partly based on financial reasons, you have no understand
of basic business principles.

>some bogus header ... FOR THE LAST TIME ...
>I NEVER DID QNYTHING ON USENET FROM ANY MACHINE IN THE
>USE DOMAIN >>>>

"Bogus Header"? So, its your assertion that I'm making all this up?
Ha!

Go to DejaNews. Search in the "Old" USENET database for
"Amateur License Restructing Carl Stevenson" and find the article
posted on March 9, 1997. Read it. Examine the Message-ID field.

Am I making it up? In your own words, Carl: Kiss my ass.

You are nothing buy a phoney... A holier-than-thou hypocrite who
fabricates... No, that's being nice... who LIES when it suits your
needs.

Or, is DejaNews now part of the Giant Conspiracy? Did you see Men In
Black outside your apartment today?

>Check the From, you idiot ... carl@ais.net (my private ISP account)

So what? I can as easily change the FROM line in this message I'm
posting -- even though I'm posting from "KD1HZ@ANOMALY" I've changed
the "From" line to "MIKE@SBS.COM"... So what? All this shows is that
you were not smart enough to totally cover your tracks -- until,
that is, I caught you and pointed it out to you.

>You cretin ... there IS NO SUCH HOST ...

Yeah, yeah, yeah... Tell it to the jury...

Behold, further evidence...

According to the headers of your posting, the Newsreader you were using
was "Microsoft Internet News 4.70.115". This software constructs the
Message-ID line and uploads it to your USENET news server. The software
obtains the hostname portion of the Message-ID line from the host name

in the Windows network configuration of your machine....

So... In order for the "Message-ID: ....@cstevens.usr.com" to be present
in the header, the Windows box would have to be known as "cstevens.usr.com".

Now, its a simple matter of configuration to tell your Microsoft Internet
News software to use "news.ais.net" as its news server... I imagine
with USR having a nice connection to the 'net, and ais.net having a
good connection to the 'net, that your response time was pretty good.

Anyone don't believe me? You can verify it yourself if you would like.
Use Microsoft Internet News to post a message to your news server and
examine the Message-ID line of the posting it sends. Furthermore, visit
DejaNews and retrieve Carl's original posting if you don't believe me.
The facts are all right there... Carl is a liar, plain and simple.

(Heh heh. I have to admit, nailing him on this was a lot more fun than
I anticipated.)

>Have you used the latest version, PGP Mail ???

Sorry Charlie... PGP mail now interacts with Microsoft Internet News to
change USENET headers? Boy, that's a feat of engineering.

>> < (not that where I post from is any of MD's business)
>>

>bonus ...

So, you think this gives you special dipensation and you should be
allowed to post to USENET from your machine (cstevens.usr.com, according
to the Windows network configuration on the machine you posted from...)
just because you liked to? How many thousands of dollars of USR stockholder
profits did you waste away reading USENET news at work when you should
have been working, making us MONEY?

>> That is, after all, your "reason" for question Ed Hare, isn't it?
>
>Not exactly ... I asked Ed because he was posting from the arrl.org
>domain and using a sig that called him out as an ARRL employee.

I would think Ed is proud to be an ARRL employee. Now, personally, I
don't list my employer since it is nobody's business; but that's the
beauty of having a UUCP connection to your own personal UNIX box with
a news server.

>I was, as I said, posting from home on my own time and my own
>computer, and my own ISP account ...

Liar, the facts show otherwise.

Now Carl, nobody is blaming you for posting at work. Heck, I even used
to do it when I worked at Brown. Unfortunately my current employer doesn't
have net access, or I probably would from there too. Technical people
need an occasional "brain drain", and reading and posting to USENET
helps to do that. Most managers understand it, and don't bust your
chops too much as long as your work gets done and you don't abuse it.
So, just fess up to it, stop trying to cover your tracks, and you'll
be much better off... We'll all understand...

MN the Maniac wrote "How about we start a new Newsgroup for these folks?"

Well Maniac, if you go back far enough you'll see this debate began with a couple people asking that the code tests be dropped. Then the pro-code folks came in to defend the code. And it got so out of hand that a new NG was suggested (rec.radio.amateur.policy) so as to take the debate off of .misc. A vote was taken, an overwhelming number of "YES" votes were counted, and thus .policy was born. (It was given the broad name "policy" so as to include all regulatory issues regarding the ARS, not just code.) That worked FB for a long time. Then about a year ago the debate found its way back to here (primarily thanks to Carl whose nutty justification went something like "This debate is too important to be buried on some obscure newsgroup that few sites carry..." [his usual horse poop]).

So, if the anti-code folks would cease their whining, there wouldn't be any reason for the pro-code folks to post. Since that won't happen, maybe Carl will take the daring lead and ask his followers (all 6 of them) to join him over on .policy so this group can go back to its miscellaneous (.misc) status (meaning what's not appropriate for any of the other r.r.a groups is fine for here).

Carl wrote "... collecting 10-10 numbers is idiodic, pointless ..."

Hi Carl,
As you well know, the 10-10 club was created specifically to populate 10m during the bottom of the sunspot cycle. 11m was lost to hams due to disuse; 10-10 wanted to insure the same thing didn't happen to 10m. Rather than disparage them you should thank them.

To bad you VHF-only folks didn't create a 220-220 club - maybe we wouldn't have lost 2 Mc from that band. (What are you currently doing to insure that further V/UHF spectrum isn't lost?)

73,
Jeff KH2PZ / 7

Almost right. Visual Basic V5.0 will only compile for WIN95 or NT.

Visual V4.0 will create 16 bit code for use under WIN3, or it will
create 32 bit code for use under WIN95.

> OK, thats a no-brainer.....

The irony is that the ONLY "CW only" spectrum in any of the
ham bands is at 6m and 2m where no-code techs can operate
all they want without ever having passed a Morse test ... this
clearly shows how *important* Morse testing is ... (not) ...

> > I understand that not many people use CW to communicate.
> > For many people, knowing CW does not do anything...

> Then you are misinformed. Thousands of people use code every day.

Maybe so, but 100's of thousands (probably millions) use radio every day
with no need for knowledge of Morse whatsoever ...

All the lame excuses in the world won't make Morse "necessary" for
anything ...

"Working DX" and "DX chasing" are not the problem. Poor operating
practices are. The sad fact is that many "dx chasers" will stop at
nothing to get that "additional country". Unfortunately, since they
are all running 200' towers with stacked beams and 5KW PEP amplifiers,
all you hear on the bands are them -- and they give the 99% of other
amateurs who would enjoy making a contact a bad name. However, the
actions of those few should not be used to stereotype an entire
category of the hobby.

Hey Jackie ... don't blame me for the 220 fiasco ... that one
falls squarely in the laps of you beepers and the ARRL ... I was
quite active on 220 at the time ... where were you? Probably siding
with the ARRL in bitching at the FCC that their proposal for a
no-code ticket was a horrible thing that would destroy ham radio.

The ARRL pissed the FCC off by opposing the no-code tech ... that's
the primary reason we lost spectrum in the 220 band ... it was a slap
on the bad boy' wrist ... directed at teh ARRL, but we all paid for it ...

Practice, practice, practice. You may not want to hear this, but
there are no effective shortcuts to learning code. For most people,
one or two short sessions a day are better than long, tedious
sessions. And keep after it. Do it every day. If you start skipping
days, you may get lazy and never learn the code. Keep after it, and
good luck.

Yeah, the military has used these techniques for years. More recently they
have found commercial application in the mobile multipath environment, IE
CDMA cellular systems. The Navy used a varient of one of the techniques
I mentioned to do multiplex RATT off the Moon in the 1950s as an operational
communications technique. The libration fading off the Moon has many of
the same characteristics as auroral signals.

Natural aurora is generally not a commercially viable propagation method
because its presence is too erratic. But propagation conditions with similar
characteristics exist which are more predictable and useful. The techniques
used for them can be applied to the auroral path as well. (And there is the
newer idea of creating artificial aurora on demand with systems like HAARP
which may result in aurora propagation being a viable alternative to some
other methods in special circumstances.)

Your technique certainly has merit in many situations, Carl, but feed forward methods are inherently unstable under certain conditions. Weak auroral signals can be one of them. Some of the less sophisticated methods I mentioned can have less hunting under auroral conditions. It's true that the irreducable error rate is higher for most of them, but it is often more useful to have a clear erasure than an unstably recovered bit. That makes the FEC's job easier. With moderately

strong signals, feed forward methods are usually a big win. That's sometimes the case with auroral propagation, but not always.

Morse is a quintenary timing code. When you deliberately deviate from the
specified symbol timings, you are no longer doing Morse code. You are doing
a different code using different symbols.

>prevented them from doing so.

What I am suggesting is that the Morse testing issue is symptomatic
of the mindset and attitudes of those who are impeding technical
progress. This has been clearly shown in the resistance, by ARRL
and others, to modernizing the rules to permit experimentation with
better methods, on HF and on VHF. Most recently that has been
resistance to real liberalization of SS regulations, but it goes back
a long way, including resistance to RTTY and SSB in an earlier
era.

This ludditism pervades the service, and it has a chilling effect on
those wishing to experiment with newer and better techniques. It
is not primarily a technical issue, it is a social issue. The clinging
to Morse testing as a rite of passage is a powerful symbol for those
with this social disease.

>One can discuss that Morse code should not be a mandatory part of Amateur
>Radio, but this idea that it is actually stopping technical progress is
>without significant merit. Oh, for sure, there may be a few high-tech
>types who would get into Amateur Radio if they could have HF access
>without a code test, but it was offered that these people would get into
>Amateur Radio and develop new technology on VHF without a code test, but,
>for the most part, it hasn't happened.

For techniques such as SS, even development at VHF is forbidden. It has
been pushed away from spectrum with interesting characteristics by those
whose vested interest is the status quo. Primarily, those are the same people
who also want to maintain the Morse rituals. In both cases, it boils down to
a dog in the manger ludditism.

Note that this isn't an issue which only affects those wishing to enter the service. It also affects those already in the service, curtailing their choices in the manner in which they can pursue advancement of the SOTA. The Morse forever crowd fights them as well as attempting to throw roadblocks in the path of people on the outside wishing to get in.

It is this power as a *symbol* which makes the continued Morse testing issue such a powerful and important rallying point. It represents much more in the minds of people than a mere text encoding method whose glory days have passed. It represents a longing for a bygone era when things were simpler, when the pace of change was slower, and when those with limited understanding could claim to have grasped the essentials of their service.

OK Carl, I agree. However the same people use the same radio everyday with no need for knowledge of theory either. For a vast majority of hams, its "plug and play". So, what do we do? How do we bring this to the point where we start to compromise? I think the first step would be to lower the SPEED required at respective levels. Food for thought......

Wrong. It demonstrates that Mike understands human nature and the real
world, and is not expecting that those will easily change in the near
future, regardless of your unrealistic elitist agenda.

>it is expected that we'll tinker and experiment and create something
>useful there ... if we don't there will be no market opportunity for the
>rice boxes, because the bands will be reassigned to someone who
>WILL use them.

Give hams reason to use those bands for communication, not just for tinkering, and they'll use them. One way to motivate hams to move is to increase the number of hams by a large factor; something you seem to be dead set against. All it took to get hams to use the 440 band was for the manufacturers to start peddling affordable 440 radios, and later even more affordable dual-band radios. Couple this with increased congestion on two meters because of rule changes, and many hams began using what had been a relatively unused band. When manufacturers began selling affordable 220 rigs in response to Novice Enhancement, 220 activity picked up noticeably. When rules changes made novice 200 activity moot, they stopped promoting 220 radios, and usage dropped off again. If Japan, Inc, were to offer an affordable tri-band rig that included 220, use would rise again. Technology had NOTHING to do with any of these changes, they were all in response to plain old human nature and well-known marketing techniques.

>Your problem, Mike, is that to you everything in ham radio must
>be available at the store, just by plunking down your credit card.

When was the last time you built a SSB or FM transceiver from scratch?

>You're too incompetent and lazy to do anything but sit there and
>operate some appliance, and admit that you haven't a clue as to
>how to fix it if it breaks ...

Like it or not, that's a fair description of most hams. Even with the will, it's nearly impossible to work on much of today's electronic equipment without resources that many/most hams simply do not have. In many cases, it's cheaper to buy a new item or module than it is to repair a broken one.

>> Yup. Remember the old adage: follow the money. If someone can make
>> a buck off of it, you bet they will support it.
>
>This assertion is yet another pro-code red herring ... there has never

No, it isn't. It's a statement of fact.

>been anything posted here to indicate that any of the participants who
>favor elimination of the code hazing ritual have *anything* to do with or
>have been influenced in any way by "the big manufacturers" ... nor have
>I ever seen any statements by "the big manufacturers" to the effect that
>they support or encourage such rules changes ...

A minor handful of hams posting in this newsgroup is basically irrelevant to what's driving the move toward no-code. Wayne Greene has been preaching this sermon for twenty years or more, and he's not even in this group. I daresay he's reached a few more hams with his rants than you and all your cohorts have reached here in this little

backwater of UseNet.

Same to you, especially since (I think) we're arguing the same point.

At any rate, okay, _I_ don't think you'll ever HAVE to use it. With exeception of isolated, CW-only equipped, third-world operators, there is just about no one out there with whom a conversation would _require_ CW. No, weak DX doesn't count. Yes, communication can be EASIER under poor conditions when using CW. Its also easier, faster, and more reliable with other digital modes under the same poor conditions.

That said, there are a LOT of CW operators out there. Lots of folks find that kind of communication fun. You might be one of them. There's a use for it.

Am I getting closer?

Your right to swing your fist ends where my nose begins, fella. Lucky
for you, the First Amendment does allow one to make a damn fool of
himself. Doing so on ham radio doesn't help the hobby, however.

Hi,

I am looking to get copies of service manuals for the following :

Hewlett Packard, Vacuum Tube Voltmeter 400H

General Radio, Impedance Bridge 1650-B

Can anyone help me locate these?
I need to repair one and calibrate both.

Any info is greatly appreciated!

Please email me: rhard@ix.netcom.com

Thanks!!!!
Ron

Fine. Take it to e-mail, then, and save the rest of us your
posturing.

>>Some folks lose sight of the fact that ham radio is supposed to be fun
>
>Carl would say that Part 97 doesn't say that amateur radio is supposed
>to be "fun".

Well, he seems to have fun raving about elimination of the code test.
I have fun applying ego acupuncture to pompous twits. You have fun
insulting Carl. It's a big sandbox. All I ask is to leave the
personal insults out of it. I can dish out invective as well as the
next guy, but this isn't the place for it, IMO. We give the image of
ham radio a bad name with such nonsense, and that's not a Good Thing.

>> I don't like a lot of what goes on in ham radio,

>commercial gear for higher frequencies means that usage in those areas
>will not take off for some time to come.

Even on our most used FM band, two meters, the band is silent a huge
majority of the time. There will be much more activity in population
centers, of course, but I'd venture that if you put a spectrum
analyzer on two meters in L.A. you'd still discover a lot of unused
bandwidth except for peak periods.

>>>-- Ted Kennedy has killed more people with his car than I have

Nonsense. You've included both those lines to agitate people. Do it
in a political conference, not in a ham forum. I could argue both of
your statements, but this is neither the time nor the place.

>since some people have taken it upon themselves to print out my postings
>and mail them to my employer. Its nice to be popular.

I fail to follow the logic of how a snotty comment about liking your
opinions protects you from e-mailing morons looking to incite your
employer.

>itself unattractive and painful to enter for anyone with more intelligence
>than the bare minimum required to learn to beep ...

I seriously doubt that you have personally talked to over two hundred
("hundreds"=pluralx100) about their reasons for not becoming hams.
If, in fact, you've actually done that, then I submit that the answers
you got were more polite rebuffs rather than actual reasons. It's a
lot more polite to blame CW for not getting a ticket than to tell you
that the person has no real interest in getting involved in the
perversion called ham radio. I stand by my assessment of those who
choose not to become hams. Anything of value is worth a little
effort. Just because the effort is, to you, meaningless, does not
negate that simple fact.

<medical strawman analogy deleted>

>This is a PERFECT parallel to that of the hundreds of technical folks that I
>have worked with over the years who were interested in ham radio and fully
>qualified, but unwilling to "clean bedpans in Newington."

Well, no, it isn't, but I don't feel like wasting time explaining just
why it isn't. You gigged me for a similar analogy earlier, however.

>FIrst ... I feel no sense of urgency WRT "dising" you ... you present

>> only requires some dedicated practice.
>
>All of the VE statistics that I've seen posted here indicate a shockingly
>high rate of failure ... but don't let the facts confuse you ...

Please post some actual, verifiable stats on the matter to educate me,
then. Be sure to define "shockingly" and explain how a certain rate
of failure refutes my allegation that the test presents no significant
barrier to anyone who WANTS an ENTRY LEVEL TICKET. To disprove that,
you'd have to show that a significant number of applicants failed at
least two or three tries at a codeless tech or a novice ticket. I
submit that (almost) anyone who fails such a test and never comes back
to try again doesn't WANT to be a ham very badly. I added (almost)
because there are some handicapped folks who have to struggle to get a
ticket.

>> It's still a copout to blame others for not supporting YOUR enjoyment
>> of the hobby.
>
>The point is that it's NOT for MY enjoyment ... at least not exclusively.

Then why are you doing it? Evidently you enjoy frustration, thus
proving my point.

>Putting up network resources is something that should be funded in a
>shared manner by ALL of the users ... not just the technical folks who

You bet. It doesn't work that way, however. Deal with it.

>also expend the sweat and elbow grease to get the job done. What
>I'm railing on are the users who use the resources, never contribute a
>freaking cent to the construction or maintenance of the network, them

>hill and fix the f___ing node." Those are the ignorant, lazy, cheapskate
>bastards to whom I was referring before ... they exist in significant numbers,
>and I stand by my characterization them ...

Been there, done that, got the scars to prove it. Took me a while to
realize that there was a better way. If you charge folks for using a
system, then they're justified in complaining when it fails. If you
provide it with no obligation to the users, then you can tell the lazy
freeloaders to take a hike when it breaks down. I have nothing
against user-supported systems. Unfortunately, most all of those
eventually get taken over by incompetents through political
shenanigans. Some rare groups have managed to keep the tech part of
the system completely separate from the political/fundraising part,
but it's extremely difficult to do over the long term. This sort of
digresses from the topic under discussion, however.

>> Ham radio is not a store, it's a pot luck picnic. Bring what you can,
>> and share what others have brought. Or stay at home and pig out, if

>> that's what turns your crank.
>
>You're suggesting that those of us who are interested enough put up
>our own network resources and then "lock out" the cheapskates who
>weren't interested enough to contribute to the building of the resource?

Nope. Ham radio is, by definition, a non-commercial system. You
can't charge for use of your system directly. Funding it indirectly
is often more of a hassle than just getting a small group of
like-minded individuals and funding it yourselves. Face it, the cost
of nodes and repeaters isn't all that high if you are as technically
inclined as you say you are. The real expense is site acquisition and
power costs, and there are often ways to reduce those, too. For the
cost of a mediocre contest or DX station, you could finance a hell of
a repeater or packet system. It's just a matter of priorities.

>Boy, I can hear the lazy cheapskates screaming and bitching about
>that one already!

Let 'em bitch. Nobody bitches like hams, as you and I demonstrate
here daily.

>That's a lot like "private, closed" repeater systems ... while I support the
>right of any licensee to control access to and use of his equipment, the
>channels are a different story ...

I don't disagree with what I think you're saying here.

>> Interesting that you don't know enough about the call sign system to
>> take a guess at how long I've been licensed.
>
>Guesses are of little use ... people move, callsigns change, you can't
>tell much for sure from a callsign ...

WB7xxx calls haven't been issued since the 70s, except for a few
vanity calls, I suppose.

>I give up Glen ... no amount of reason seems capable of evoking
>anything much more eloquent than a "bullshit" from you, so I'm not

If you post what looks and smells like bullshit, I'm going to call you
on it. Solution: Don't post bullshit.

>going to waste any more time on trying to convince you of anything.

Somehow, I thought you were a more worthy opponent. You've caved much
more quickly than I would have thought, given your daily prolific
ranting here.

>Enjoy yourself out in the sticks with your glorious 1200 baud system.

Sigh. Again you've ignored what I wrote. We have an excellent 9600
baud backbone system here covering about a hundred linear miles, and
supporting most of S.W. Idaho and a chunk of E. Oregon. We even have

a 9600 baud two meter port, which nobody uses. The 1200 baud ports more than supply the bandwidth needed for all the traffic we have, with room for a lot more. It ain't state of the art, but it works. There's still room for improvement, too, without obsoleting the current system and spending thousands on some new, highspeed system that nobody would use.

>Just don't be surprised when there's nobody else to talk to because
>you've woken up one day and found that the rest of the world has passed
>you by while you were asleep ...

Well, sleep is good. Helps you from getting delusional from fatigue. I'm way too old and tired to try to keep up with "the world." Have fun out there on the bleeding (heart) edge, and try not to cut yourself.

3878. *** Proposal for CW qualification in Canada / U.S. ***

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-26 00:00:00 UTC
From: masa@writeme-x.com
Message-ID: <3388f74e.8868152@news.bctel.ca>
Source record: 197503
Cross-posted to:
rec.radio.scanner,alt.radio.scanner,rec.radio.amateur,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.misc

In my opinion...

Open some HF bands to non-code technicians.... but make a restriction
such that:

"Without CW qualification, the operator cannot transmit CW
codes."

I understand that not many people use CW to communicate.
For many people, knowing CW does not do anything...

Well... I made up a plan... considering the people who already have CW
qualifications.

My Licensing System Proposal in U.S. / Canada.

1) Basic
250W
Above 30 MHz + under 4 MHz + 15m band

2) Standard w/basic w/CW5
500W
Above 30 MHz + under 14 MHz + 15m band

3) Advanced w/basic w/standard w/CW5 w/CW9
1000W
All bands

---

4) 5 wpm CW test
CW permission for
Above 30 MHz, under 4 MHz + 15m band

5) 9 wpm CW test
CW permission for
Above 30 MHz, under 14 MHz + 15m band

6) 12 wpm CW test
CW permission for all bands
--

*** Making all tests separate from another. ***

Method of Upgrading
Basic -> CW5 -> Standard -> CW9 -> Advanced -> CW12

*** Making all tests separate from another. ***

If you are in Japan, you can use some HF bands without getting CW qualifications. However, you may not transmit CW. You have a power restriction of 10W for HF bands. If I remember it correctly, you can use under 4 MHz and 15m band without CW qualification.

>
>"and the horse you rode in on, too ..."

Ah, I see. Well, an earlier post from Cecil puts the lie to your assessment, but I'm glad to see that you've finally come out of the closet yourself on this issue. Up until now, I've been giving you the benefit of the doubt, and dealing with you as if you were an intelligent and thoughtful person who just happens to have strong opinions and an abrasive attitude. Sort of like myself, actually.

Now I can see that you are just another fatuous flaming asshole with absolutely no sense of humor, so I can forget about taking anything you say seriously.

I apologize to anyone offended by the language. I know I violated my own advice. I'll take my punishment. It was worth it. Who knows, I may even have to join the ranks of the CW Forever crowd, just to piss Carl off even more than he already is, if such a thing is even possible.

Please excuse me now, I have to thumb through QST looking for any communications equipment offered by Carl, so's I can have me one of them State Of The Art Stations. I don't want to be stuck in my old 1200 baud world out here in the sticks, when there are so many inexpensive, efficient, high-speed networks out there that I'm missing out on. I'll probably need to write a few letters to some lazy, freeloading bastards, too, to beg for money to support my Great Leap Forward to the Bleeding Edge of the 21st century. Or maybe I could find an old hand key and go down on 80 and beep to some other old farts stuck in the last century. So many choices, so little time.

Aw, the hell with it, I think I'll just watch some TV.

It's Only A Hobby, folks, it's not a religion. If it ain't fun, don't do it. Sheesh!

No, then how about sending 100,000 (or more) email messages from
100,000 (or more) hams asking the ARRL Directors to support some
improvements in the licensing structure?

There are more than 700,000 U.S. hams and less than 200,000 are
members of A.R.R.L. You don't need to be a member of A.R.R.L. to be
able to write to the A.R.R.L. Directors. There email address are
listed in QST or just write to: hq@arrl.org

Source record: 197508

I just realized I typed "Part 95" in my "Hobby or service" post.
After being licensed for 21 years no one should doubt that I
know which portion of the Title 47 CFR governs us. I think the
typo stemmed from (a) not enough coffee this morning, and (b) I'm
typing on an IBM keyboard rather than my usual Wyse 30 in Hawaii
(yes, I still use a 30).

It's a sad thing that the once usefull and fun C.B. band has been
reduced to this. It's also sad that so many people in this once great
nation have lowered themselves to this point.

>since two out of 5 clauses explicitly specify technical competence
>and advancement while two more out of the remaining 3 imply or partly
>deal with technical competence: "emergency ops" and "pool of trained
>personnel".

This is simply not the case. I posted a detailed breakdown of 97.1
some time ago, but I'll do it again:

Subsection A: Specially mentions emergency communications only.

A significant amount of technical
knowledge is >not< required to provide emergency communications. I
do not agree with your assertion that the "more technical" you are the
"more likely" you are to be on the air during an emergency -- there is
no evidence to support this. Being on the air during an emergency
requires practical skills, to mount a temporary antenna and hook up a
radio to a battery (if without main power). During an emergency, a large
number of people are not going to be breaking out the soldering irons and
homebrewing their own transmitters to provide "emergency communications
(at least this is what the anti-code test crowd sez when the "downed
aircraft" scenario is mentioned, so by logical extension it applies to
all emergency situations.) By far, of more importance during an
emergency is having a trained pool of operators to pass the traffic.
Having 20 guys with portable soldering irons might be useful, but
people passing traffic are going to be more useful.

Score 1 for "operating" over "technical."

Subsection B: Continuation/Extension to contribute to the "radio art".

What exactly is "Radio Art"? Its not mentioned as a definition in 97.3.
Radio is part technical, but it is also the ability the effectively
communicate.

Score 1/2 for "technical" and 1/2 for "operating".

Subsection C: Improvement...in BOTH communication & technical phases of
the art.

Seems self explanatory. Also defines "radio art" as having both a technical
and operating aspect.

Score 1/2 for "technical" and 1/2 for "operating".

Subsection D: Expansion .. of trained operators, techs, and elect. experts.

Seems self-explanatory here. Notice once again "trained operators" are singled out over "techs" and "electronics experts".

Score 1/3 for "operating" and 2/3rds for "technical"

Subsection E: Internation goodwill enhancement.

This is 90% a communication skill. yes, some technical knowledge is necessary, but you can go out, buy a radio, antenna and feedline and be enhancing goodwill with little technical knowledge other than how to set up your station. Score 1 for "operating."

Let's review our scores:

Operating gets (from subsection A to E) 1 + 1/2 + 1/2 + 1/3 + 1 = 3.33
Technical gets 0 + 1/2 + 1/2 + 2/3 + 0 = 1.66

So, out of a possible 5 points total, operating gets 3.33, or 67%, while technical matters gets only 1.66, or 33%.

Thus, it is logical to conclude that operating skills play a larger role in amateur radio than technical skills.

>2) Ham "games" and "contests" are a poor example of fostering
>international goodwill. We learn nothing of other people or vice
>versa in such activities. International "health and welfare" and
>friendly rag-chewing are much better examples.

I believe this is true today, however, understanding the historical nature of how contests came into being merely demonstrates the original poster's ignorance on the subject.

>3) My message had much less to do with supporting a technical
>interpretation of 97.1 as it had to do with not throwing out
>97.1 because the poster stated he had his own personal reasons
>for becoming a ham and wished to deny any pertinence to his
>activities.

Personally, if people want to make amateur radio a technical hobby for themselves, go on ahead and do it. If they want to focus on the communications aspects, more power to them. There is room for everyone -- something the original poster seems to ignore when he starts spouting off how "communicators belong on CB because amateur radio is for technical people only".

You didn't post what VOLTAGE your gel cell was designed for!

Without that, or some way to figure out from the description of a
part number that we might be able to cross reference to voltage,
there is no answer to the question!

Plugging a 1.5 volt gel cell into a 12 volt nominal charger could
be a disaster! :)

Now to anticipte a bit... :) If this *IS* a nominal 12 volt cell, then
you can charge it with any charger that has more voltage than the level

to which it has decayed. So-called 12 volt lead-acid car batteries have a peak charging(ed) voltage of about 13.6 volts DC. The higher the charging voltage is across a discharged cell, the higher will be the current drawn. At roughly the 13.6 volt level, when the battery becomes fully charged, the current will go down.

Your 500 MA charger may or may not have current protection in it. It *might* be suitable to charge the gel cell, assuming the design voltage range for it is OK for the cell. It may be that it will work fine, just take about 14-20 hours to fully charge the cell. An ammeter in series with the charger will telll you if the draw is over the 500 MA level or not, assuming the whole mess is the same nominal voltage level.

Batteries that are *identical* can, sometimes, be connected in parallel. Note that even they be physically alike, the cells inside them may be slightly different due to aging. Therefore, yes, you can gain current capacity this way and also gain run time for equipment fed with batteries in parallel, but be prepared to also find out that one battery may actually discharge the other one due to a weak cell you do not know about!.

The most important thing to know about all this is something you touched on, but didn't comment about. Be *very* sure, when you parallel two batteries, *not* to get the polarity wrong. Of course there will be lots of sparks if you make an error, but less often, should you get things welded together or clamped solidly, by accident, you can be a *very* badly hurt soul. Under massive charge/discharge scenarios, batteries EXPLODE. Mis-used, they can burn you, blow acid on you, blind you or whatever, and, set fire to things all around them.

High capacity alkaline cells are a real problem for this, as are gel cells.

I hope nobody takes you to task for posting your request. A lot of us may not realize you may be a book ham. We were all that, once. I've tried to help with what you asked in that light.... assuming you were seriously asking for help...

>So, out of a possible 5 points total, operating gets 3.33, or 67%, while
>technical matters gets only 1.66, or 33%.

I said it was debatable ranging from 40 to 80%. Some might go further
and even claim 100% as an improperly set up rig makes operating skills
moot, while communications can still occur with lack of operating skills
so long as the system is put together properly. I can also go through
your assertions and make equally self-serving but opposite ones to come
up with the reverse scoring.

Everyone can read the words in 97.1 and reach their own score. I don't
deny that operating skills are important and I certainly believe that
technical skills are important. But I think you'll find few people
that are as certain as you are that operating skills are exactly twice
as important as technical skills. Since your exercise reached a
questionable result, the steps of your exercise and your implied
precision are highly suspeect.

Hello,

I'm looking for information on Cushcraft's ARX-270 vertical fiberglass 2 meter/440 antenna. Anyone have any feedback on this rather expensive vertical antenna?

ALSO, Anyone have any comments about fiberglass antennas?? Pros vs Cons??

Thanks,

Jhulet@aol.com

3C0 - The 20-27 May 3C0DX expedition to Annobon Island has been
cancelled
at the very last moment. Eleven out of 13 operators have
been
unsuccessful in obtaining visas for Annobon. The DXpedition is
now

scheduled to start on 11 October.
3DA - Koji, ZS6CAX will participate in the CQWW WPX CW Contest as
3DA5A
(SOAB). Before and after the contest he will be active as
3DA0NX.
QSL for 3DA0NX is via ZS6CAX (bureau or direct) or JM1CAX
(bureau
only). QSL for 3DA5A via JH7FQK.
5B - RA9JX, RA9JR, RZ9UA, RA3CQ and RZ3BW will participate in the
CQWW
WPX CW Contest as H22A from Cyprus (AS-004). QSL to Uldis
Silinsh,
P.O. Box 3, Valmiera, LV-4200, Latvia.
9A - Gus, 9A/DJ8QP/P, who is currently active from EU-136, will
not
operate from EU-110 before November.
BV - Gus, SM3EVR/BV2 is active from Taiwan (AS-020) until October.
QSL
via SM3EVR.
F - Larry, F5PYI plans to be /M from some DIFI islands on 24
May
(afternoon).
HZ - Thomas, SM0CXU/AB5CQ will be active during the CQWW WPX CW
Contest
from HZ1AB. Plans are for either 40 or 20 metres only. QSL
via
K8PYD.
I - Special event station IQ3AC has been active since 10 May and will
be
operated by ARI Treviso until 31 May. QSL via IK3GES.
I - IQ1A will be active during the CQWW WPX CW Contest. QSL via
I1JQJ.
I - Oreste, IK3VIA will participate in the CQWW WPX CW Contest as
IU3V
(SOAB) from Lido Island (EU-131, IIA VE-032). QSL via IK3VIA:
I - Gabriele, IK3GES will be IL3/ from the island of Camerini
(IIA
RO-003) between 23 and 25 May and from the island of Bastimento
(IIA
RO-010) from 30 May to 1 June. QSL via home call.
I - Bad weather conditions forced Fabio (IK6JOT), Sergio (IK6MWK)
and
Fabio (IK6ZER) to postpone their planned activity from the
Ponziano
Archipelago (EU-045) to 31 May-1 June. QSL via IK6MWK.
I - IT9GAI and IT9YRE are planning to operate from a few IIA
Sicily
islands (Pietra Patella, Scoglio Guicciarda, Isola delle
Palme,
Scoglio a Pizzo, Scoglio dei Maltesi).

JY - George, JY9QJ and Ulli, JY8YB/DL5MBY will participate in the CQWW
WPX CW Contest as JY8YB (Multi-Single) from Amman, Jordan. Ulli will
be active after the contest as well.
KH2 - JI3ERV/NH2C, JG3RPL/N1BJ and JR7OMD/WI3O will participate in the
CQWW WPX CW Contest (Multi-Single) as NH2C from Guam (OC-026). QSL
via JI3ERV.
KH0 - Aki, JA5DQH will be active as KH0AA from Saipan (OC-086) until 27
May. He will participate in the CQWW WPX CW Contest. After the
contest he will be active on WARC bands and 160 metres. QSL via
JA5DQH.
KP2 - Andy, SM4CNN/DF3IAL will be active from Virgin Islands (NA-106) as
WP2Z between 22 and 28 may. He will participate in the CQWW WPX CW
Contest. QSL to DF3IAL either direct (Anders Larsson,
Riedhalsstrasse 10, D-60437 Frankfurt, Germany) or through the
bureau.
LA - The Trondheims-gruppen av NRRL has been granted permission to use
the special call LM2T between 30 May and 6 June to celebrate the
1000 years of Trondheim. QSL via the bureau or direct to LA2T,
Trondheimsgruppen av NRRL, Box 929, NO-7001 Trondheim, Norway.
OK - OK2PHH will participate in the CQWW WPX CW Contest as OK7DX. QSL to
MDXG-VYCOM, Box 54, 62700 Brno.
P4 - John, W2GD will participate in the CQWW WPX CW Contest from Aruba
(SA-036) as P40W (SOAB). John plans to be active until 26 May. QSL
via home call.
PY - Alex, PY1KS will participate in the CQWW WPX CW Contest as PX1I (10
metres).
T33 - Ron, ZL1AMO, is back in home. He was not able to go to T33, Banaba
[425DXN 312].
V2 - N2BA will be operating from the V26B contest location (NA-100) for
the CQWW WPX CW Contest (callsign as yet unknown). QSL via

N2BA's
current address (11 Columbus Ave, Glen Ridge, NJ 07028 USA).

==========

VE - Special event station VX6CAR will operate from 18 to 21 May
to
celebrate the 75th anniversary of CARA (Calgary Amateur
Radio
Association). CARA members are allowed to use a special prefix
VF6
from 21 May to 1 June.
VE - Dennis, VE5AEE and Ernest, VE3NSZ are off to do a few islands
and
join the celebrations on Prince Edward Island (the opening of
the
new Confederation Bridge) [425DXN 315] and Newfoundland (the
landing
of John Cabot at Bonivista 500 years ago). Operations are
planned
from 29 May to 15 June and include Lennox Island (NA-029,
C.Is.A
PE004 on 29 May as VE3NSZ/XN0/M), Change Island (NA-198,
C.Is.A
NF011 on 10 June), Fogo Island (NA-198, C.Is.A NF005 on 11 June)
and
some new VE islands in Prince Edward, Newfoundland, Labrador
and
Quebec provinces. QSL either direct or through the bureau.
W - John, NL7TB will be active from several USI islands in
Idaho,
Wyoming, North Dakota, South Dakota and Montana between 22 May
and
4/5 June. QSL via NL7TB (John Reisenauer, 23406 E. Kennedy
Rd.,
Benton City, WA 99320, USA).
W - Lew, N6VV will be /P (20 and 40 metres CW and SSB) from
Santa
Catalina Island (NA-066) between 30 May and 2 June.
Equipment
includes a beam antenna and an amplifier, so (hotel
staff
permitting!) Lew will be looking for Europe during West
Coast
evening and morning openings. QSL direct to N6VV.

YA - John, who operated S2/PA3BTQ from Bangladesh, is now in
Afghanistan
with the Red Cross.
ZP - Ernesto, LU6BEG will participate in the CQWW WPX CW Contest
from
Paraguay as ZP0M (single operator, 15 metres). QSL via ZP5XF.
Before
and after the contest he will be active as ZP5/LU6BEG (QSL via
home
call).

Schmieder (KK6EK); "The DXCC2000 Project" by Rick Roderick (K5UR); "RF
Exposure Regulations & the Dxer" by Jim Maxwell (W6CF); "ZY0SK St. Peter &
St. Paul Rocks" by Karl Leite (PS7KM); "It ALL Starts at the Microphone" by
Bob Heil (K9EID); "AH4/AH0W Midway Island" by Frank Smith (AH0W). The Gala
Banquet programme include DXer of the Year Award to Al Hernandez (K3VN) and
"VK0IR Heard Island 1997" by team member K3VN. Last but not least "DXCC QSL
checking" by Bill Moore, NC1L.

QSL DX1CW ---> JA3GN is *not* the QSL manager for club station DX1CW. QSL
should go direct to CW PHIL, P.O. Box 1048, Manila, Philippines 1099 or to
4F1FZ (Rey Fermin, 248 Shaw Blvd., Mandaluyong City, Metro Manila,
Philippines 1501).

QSL OD5NA ---> IK3ZAW (Veronica Della Dora, Piazza Fiume 14, 30126 Lido di
Venezia - VE, Italy) is the QSL manager for Nabil, OD5NA.

QSL YN1RLI & YN1KDM ---> Dave, TI5RLI operated as YN1RLI from Managua
recently. QSL is via WA4JTK. Dave will be back to Nicaragua during the last
week of May and again in June. QSL for YN1KDM, who operated with Dave, is via
TI5KD.

QSL VIA IK3GES ---> IK3GES (GAbriele Gentile, Via Baratta Vecchia 240, 31022

Preganziol - TV, Italy) is the QSL manager for 5T5FA, TZ6BHV, RA6WA, LX2MR,
IL3SP, IL3/IK3QAR, IL3/I3ILH, IQ3AC and for his own operations from F (1991,
1992, 1996), SV8 (1993-95), SV1 (1993-95) and IL3 (1995 and 1997).

QSL VIA NN6C ---> Mike, NN6C (ex KM6ON) is not the QSL manager for RA0FA any
more and he has not received any news from HH2LQ for more than one year. He
is still the QSL manager for Z32XX, Z32XA and Z37FCA.

IIA - Italian Islands Award
*** IIA TROPHY - 1997 ***
==========

This Trophy is issued by the Crazy DX Group.
Every OM and SWL (world-wide) can participate.
The purpose is to contact/listen/activate the largest number of different
italian islands.
Only referenced islands from the official IIA list will be valid, but also
any possible island reference released after the Trophy's starting.
The participation is free of cost.
Have a good hunting !

PARTICIPATION PERIOD

From June 1st to September 30th 1997.

BANDS

It will be valid every qso/listening/activity on every amateur radio band.

POINTS

Each different contacted/listened/activated italian island will count 1
point.

CATEGORIES AND PRIZES
---
3 categories are available: OM, SWL and DX-PEDITIONERS.
It's possible to participate at more than 1 category. Points of different
categories cannot be combinable.
In the DX-PEDITIONERS category, it's necessary for the participant to be
the owner of the used call-sign in every activity.
A plaque will be awarded to the top scoring participants in each category.
Complete results will be sent by the postal service to every participant.

LOGS

Complete logs with datas of every qso/listening (call-sign, date, UTC
time,
band, mode, IIA reference, correspondent call-sign for SWL category)
should
be sent within November 30th 1997 to the following address:

CRAZY DX GROUP - P.O. BOX 11 - 04011 APRILIA - ITALY
or through e-mail: crazy@grisnet.it

For DX-PEDITIONERS category's participants, it will be enough to send the
complete activities list (dates, used call-signs and IIA references).

SPECIAL PRIZE FOR THE CRAZY DX GROUP MEMBERS

A special prize will be awarded to the Crazy DX Group member that will
achieve the best result.

Count the days until FRS goes the same way. I'm sure there will
be idiots trying to "shoot skip" on UHF.

Round' here, the 154 MHz VHF "dot" channels are already plagued
with "I'm stepping on you" idiots. I turned on the radio one
night and swore I was listening to CB channel 14.

It is just amazing what happens when technology is placed into
the hands of the "average" person.

Cheers,
Paul Grohe

In article <33890AB9.2088@primocomputers.com>,

> I can live with this..except one little change..how bout a profiency
> test for all modes..atv/rtty/satcom/phone/cw ect ect ect @2.00 a pop an
> genrate some funds so the fcc can step up enforcement or let us do it
> ourselves an invest the power to do it
> DON

Bear in mind that NONE of the fees collected under the VEC system goes to the FCC, funds collected pay for the operation of the VEC's and to reimburse VE's in the field for the expenses they incur in adminstering amateur examinations. The FCC operates strictly from a budget set for them by the executive branch and approved by congress. Any fees collected by the FCC goes into government coffers for general use and does NOT increase the funds available to the FCC for their internal use. Congress would have to change the law to allow regulatory agencies such as the FCC to retain the funds they collect, and that doesn't seem likely anytime in the near future.

.......Fred

3893. DX4WIN packet with Baycom ????

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-26 00:00:00 UTC
From: l38217@alfa.ist.utl.pt
Message-ID: <5mbv89$4t7@ci.ist.utl.pt>
Source record: 197518

Hi !
I need help on how to setup DX4WIN packet configuration to use
it with the BAYCOM interface.
The BAYCOM I am using is very simple model using the
IC TCM3105.
I don't know if DX4WIN can use it or if I have to load an emulator
before running DX4WIN. (like the L2 or the S2 emulators used with
other packet software to use the Baycom interface).

thanks for any help !!

Do all of those. I use supermorse, listen in on the novice portions of 80,
40 and 15 meters. I also just bought Code quick. I've been stuck at around
8-9 WPM for a year now. I'm starting to practice a lot more now as well. Get a
code practice oscillator as well and practice your sending, it helps. Try to
find someone to practice with, maybe someone you met on 2 meters for instance.

Good luck, for some of us it's not easy...

Why? What is the harm is being avoided by prohibiting an individual from using Morse code? There is no such prohibition now, and no one has shown that the lack of such a prohibition has had little or no substantial effect upon amateur operation. In other words, why impose a prohibition that doesn't solve a problem?

Noda is welcome to comment on the US system, but the Canadian system underwent a considerable restructuring almost 5 years ago. It is much simpler than Noda's proposal and works quite well. Moreover, Noda's proposal continues that notion that one need Morse code in order to progress and get more privileges. How does the Morse code speed examinations relate to the increase in 3 dB increase in maximum usuable power as one progresses through the system. I doubt that Noda's proposal would be given much consideration by the radio frequency management agency considering his proposals emphasis on Morse code, a mode of communications that has been all but abandoned by all other users.

Paul, Perhaps what is needed is a CW test to weed out the undesirables before they get a radio permit. No... wait a minute..... That has already been tried and it did not work very well. Those same idiots got by the test. Oh well.....

Watch out Andy, I gave somewhat of the same advice and was told by many do
good posters that it was illegal to run an amp. on CB.

> who I enjoy goading at every opportunity.

Mike ... you are certainly entitled to hold whatever opinion of me
that you wish ... but your admission that you "enjoy goading me
at every opportunity" reveals you for the toad/troll that you are ...
you're not really interested in debating/discussing the issues,
all you care about is how many times you can flame those whose
opinions you disagree with ...

Before you say, "but Carl, you insult me, too" ... let me admit that
I do ... but I do it because of the way you act and the stupid way that
you go round and round and twist things just to fan the flames, not
to promote real discussion ...

I insulted Steve a number of times in the past when I felt he was
behaving just the same way ... he surprised me one day and came
back with a sensible, rational proposal for change. I haven't said
anything but nice things to him or about him since ... nor will I as
long as he's trying to do more than deliberately degrade the s/n ratio ...

> Well, I don't know if I agree with you on this. Sure, a major portion
> of our spectrum goes unused, with the bulk of amateur activities
> occurring at 440mhz and below. However, the absence of inexpensive,
> commercial gear for higher frequencies means that usage in those areas
> will not take off for some time to come.

That you believe and accept as fact that "the higher frequencies"
will remain unused in the absence of appliance operator rice-boxes
gives a clear view of your total lack of understanding of what ham
radio is supposed to be about ... we HAVE those bands because
it is expected that we'll tinker and experiment and create something
useful there ... if we don't there will be no market opportunity for the
rice boxes, because the bands will be reassigned to someone who
WILL use them.

Your problem, Mike, is that to you everything in ham radio must
be available at the store, just by plunking down your credit card.
You're too incompetent and lazy to do anything but sit there and
operate some appliance, and admit that you haven't a clue as to
how to fix it if it breaks ...

> >The major push behind elimination or reduction of CW right
> >now is the big manufacturers, who need to sell high end HF rigs to
> >make a profit.
>
> Yup. Remember the old adage: follow the money. If someone can make
> a buck off of it, you bet they will support it.

This assertion is yet another pro-code red herring ... there has never been anything posted here to indicate that any of the participants who favor elimination of the code hazing ritual have *anything* to do with or have been influenced in any way by "the big manufacturers" ... nor have I ever seen any statements by "the big manufacturers" to the effect that they support or encourage such rules changes ...

> Also, any tips on getting the most out of the programs.

I'd suggest starting with four of five characters and concentrating on those until you readily recognize them. When you can copy those characters without making any mistakes, then add four or five more characters to the practice session. Continue practicing with this technique until you can copy all of the required characters for the FCC test. Once you can copy all of the characters, then increase your code speed.

Regarding the code speed, I'd suggest using the Farnsworth method in which the actual CHARACTER speed is something like 13-18 wpm, but the CODE speed is 3 wpm. That way the SOUND and RHYTHM will sound the same regardless of the actual code speed.

Also, you must find a place in which there are no distractions. You must be able to focus all of your energies on the SOUND of the code. When you focus on the code this way, don't practice more than 30 minutes at a time. As you become more proficient, you can increase the time to, perhaps, 45 minutes or so. Or, you can break a longer session into two shorter sessions of, say, 20 minutes each.

Above all, be patient! You will make mistakes, but don't let that frustrate you. There will be days when it will be difficult to concentrate, and, therefore, you will feel as though you're regressing rather than progressing.

You might also like to try my code program -- International Morse Code Processor. It's downloadable from

http://www.simtel.net/pub/simtelnet/win3/ham/imcpw313.zip

Good luck with the code.

As if YOU *ever* provide evidence to support the trash you try to pass off as
fact.

> >I have further asserted that while the no-code tech has in some
> >ways been a smashing success (it's now the most popular method of
> >entry into ham radio) it did not and has not done enough because it didn't
> >go far enough in modernizing our licensing scheme ...
>
> So, now you want to have it both ways. The "codeless license" was a
> "success", but it wasn't "successful enough".

Don't presume to put words in my mouth ... I said it was very successful,
but not as successful as it *could have been* had it gone farther ...
there's a difference between what I said and what you tried to twist it to
appear to say ... and you damned well know that ... you're always trying
to twist things .... you have to to try to make them fit your twisted view of
things ...

> Unfortunately, you provide nothing substantive to support your assertion
> that merely eliminating the CW examination for HF access will now become
> "successful enough".

Again you twist things ... we've not proposed "merely eliminating the CW exam"
we've proposed sweeping changes in the entire licensing structure to eliminate
the code-based caste system of "Incentive Licensing" and refocus the future of
ham
radio in the areas that are important to our purpose and future survival ...
that of
course scares the hell out of twits like you, Mike, cause you really don't fit
into

that future very well with your self-proclaimed ignorance of technology and all
..
The only future that you fit into is one where beeping appliance operators are
successful in their narrow-minded, bigoted attempts to maintain a status quo of
stagnation and failure to meet our purpose ... a dead end for ham radio.

> The CW-test-elimination for VHF was supposed to be
> "successful enough" (at least, that was what its supporters claimed back
> in the '80's) to flood our bands with hordes of technical elites.

Many of us spoke out in the 80s saying then that the small bone that
was being tossed to the crowd was inadequate ... but the ARRL faught
like hell against even what is today, insisting that it was "too much" and
trying to make it even less ...

> You've
> provided nothing to support your assertion that an HF codeless license
> would be any different.

We've proposed a LOT of re-emphasis from beeping to the more important
things like technical knowledge ... that alone will make "the new ham radio"
appeal to more progressive, technically-oriented folks ...

> I think the other poster nailed it on the head. Any change to the
> licensing system will draw equally from people of all intelligence
> levels on the bell curve, >unless< you specifically do something to
> skew that selection in favor of the more "technical" people you claim
> you want to eliminate the CW examination for.
>
> Thus, in effect, what you really want to do is replace one "filter"
> (a CW examination, which you personally do not like) with another
> "filter" (whatever it happens to be, something you like because it
> conforms to your own personal ideas of what amateur radio should
> be.)

In some sense, I guess requiring more technical proficiency could be
viewed as "filtering" out those like yourself who are by your own admission
technically ignorant and disinterested ... I'll be the first to say that's just
what
we need ... less technically ignorant appliance operators and more people
who are into building, experimenting, and inventing new things ...

It's clear that you and I are diametrically opposed on this Mike ... your
vision of ham radio is a "plunk down your plastic, take it home and use
it without having a clue about what's going on inside, pack it in a box
and send it back to the factory without ever looking inside if it breaks
because you haven't the foggiest idea of how to set about repairing it,
no matter how minor the problem," appliance operator's gaming paradise.

My vision of ham radio is one where the participants are interested
in *radio* more than competitive games that simply use radio as a
palying field ... that interest can manifest itself in many ways, including
experimentation, tinkering, building one's own gear, building gear like

repeaters, network nodes, etc. that others will benefit from, devising new
and better ways of comunicating via radio, and performing public service,
both by operating in times of emergency, but also by putting in place the
types of systems that are necessary to successfully carry out that emergency
communications ... contrary to the Morse Myths, whipping up a CW transmitter
from the wreckage of something and saving the world with it is NOT going to
happen ... what's needed is pre-planned response capability, incuding robust,
equipment designed to survive the disaster and operate from backup power
systems ...

> >The problem is that the curent system rewards stagnation and sloth.
> >It actively seeks to stack the deck against those who would promote
> >progress, learning, and modernization in the interest of preserving the
> >status quo for the incumbent fossils ...
>
> How would any change in the licensing system, with the exception of
> people being retested on new material at periodic times, change this?

I'm surprised that you didn't try to challenge the accuracy of my statement ...
you're slipping, Mike ... I guess you found yourself forced to admit it's true.

The license structure that we've proposed de-emphasizes the code-based
caste system of the past and present, replacing it with a system that
encourages experimentation and self-education by allowing access to the
spectrum to a much large percentage of hams, not just the beeping elite ...

Second, the testing system also de-emphasizes Morse and re-emphasizes
the technical side of ham radio ... this may discourage some who would
only be beeping appliance operators, but will encourage and enable the many
who would pursue the technical side, were it not for the unpalatable barrier
that
the code hazing ritual and the caste system have presented.

> << Right on. The major push behind elimination or reduction of CW right

> >"big manufacturers" ... (or even the little ones) ... this is pure bullshit,
> >designed just to raise the false spectre of "conspiracy" since MD and
> >the others have NO rational argument against those proposals ...
>
> You must have missed the news at Dayton a year ago (or, has it been
> two years now?) when several industry representatives put forth the
> "slow code" proposal. Don't believe me? Ask someone who went to
> Dayton that year. Len Winkler didn't invent the slow-code proposal
> he just adopted it.

You have still missed the point ... even if "the big manufacturers" did
say a couple of years ago that they thought de-emphasizing code was
"a good idea," there is NO evidence that I'm aware of that would link any
of the current crop of anti-code-test proponents with "the big guys" ...
we all firmly believe that this change is necessary for the survival of ham
radio and it doesn't have a damned thing to do with how many radios
"the big guys" sell ... in fact, I would argue that a technical revolution in
our ranks might well result in more people building their own rigs and less
buying rice boxes ...

Your assertion that "the big guys" are "behind the no-code proposal"
is absurd and dishonest and I believe you damned well know it ...

> I seriously doubt that you have personally talked to over two hundred
> ("hundreds"=pluralx100) about their reasons for not becoming hams.

I eventually talk to everyone I work with about ham radio ... and I always
try to gain new recruits ... working in the electronics industry for over
25 years, it would have been hard NOT to encounter literally hundreds of
potential hams ...

> If, in fact, you've actually done that, then I submit that the answers
> you got were more polite rebuffs rather than actual reasons. It's a
> lot more polite to blame CW for not getting a ticket than to tell you
> that the person has no real interest in getting involved in the

This is nothing more than your statement of how *you* want things
to be ... your assertion that those who state that the code is the
thing keping them from pursuing ham radio are simply offering "polite
rebuffs" is wishful thinking at the extreme ...

> I stand by my assessment of those who
> choose not to become hams. Anything of value is worth a little

: Hello,
:
: Name is Tim, call is WB6WQA. I have been inactive for
: about 5 years on HF, and have sort of lost track where
: we are on the 11 year sunspot cycle.
:
: The 10M band has always been my favorite band; is this
: band due to open anytime soon? My class of license is
: advanced, and I run about 100 W on USB with a 3 element
: yagi at about 60 ft or so. How does it look for this
: fall - winter? Maybe this summer is the time to get up
: that yagi for 10...?
:
: Any comments greatly appreciated. Thanks!
:
: Tim Watkins
: <wb6wqa@juno.com>
:--------------------

The cycle has bottomed out and is starting to increase. The most recent propogation report I saw said that the first major solar flare-up of the new cycle occured. This was about a month or so ago. Last week the ten meter band was open in the evening for a couple of hours for short skip contacts. Hope this helps.

That's like saying that since "band fraud" and "assasination" are both
prohibited under federal criminal codes, they are clearly of equal
consequences.
("importance")

It doesn't matter ... they will NOT listen ... they may act like they
are in an attempt to try to make you think they care about what
you're saying, but they REALLY DON'T LISTEN. They don't care
about anything that does not fit with their pre-ordained ideas for
the maintenance of the status quo and the "supremacy" of Morse.

The ARRL is a prime example of the "tail wagging the dog."

>(note the lack of a comma) and is, as is explicitly noted in the ITU
>version, to serve to facilitate the technical investigations amateurs
>are to carry out. Clearly, the majority of this definition addresses the
>technical nature of the service.

Umm, actually, no. Good english dictates a list of items is separated
by commas, with the exception of the last two: a-la this, that and the
other thing. Each holds its own weight, the middle is not "grouped"
with the last.

Self-training can easily be communication or technical. It requires
training and self-discipline to know how to react and communicate
effectively in an emergency situation.

>Now 97.1 sets out charter goals for the service. Lets look at them.
>(a) addresses voluntary emergency communications. That's a
>worthwhile goal, and all radio services share it to one degree or
>another. To be *effective* in that role, amateurs need to adopt
>the most effective methods available to them.

That's BS. Amateurs need to adopt the most popular, workable
methods of communication. These modes are already defined until
mass production of commercial gear that exploits newer, "better"
technologies is available.

>(b) directly addresses the amateur's
>role in advancing the radio art (note art is used here in the
>same sense as Industrial Art, and is an archaic legalistic
>way of saying *engineering*). This is clearly a technical

>basis for the service.

Wrongo. See (c)

(c) addresses self-training in the
>communications and technical phases of the art. Obviously,
>to serve the nation, methods and techniques *relevant* to
>current communications ...

"communications ... phases of the art". That means 'radio art'
has two portions: ability to be technical, and ability to be
an effective communicator. The latter is more important in
public-safety/emergency services arenas.

> (d) calls for expansion of the national
>reservoir of trained operators, technicians, and electronics
>experts. There can be little doubt that this too is primarily
>a technical challenge to the amateur service.

The first thing mentioned are "operators". One of three.

> And (e) is the sop to "goodwill" which amateurs so poorly obey.

The vast majority of amateurs do well to enhance international
goodwill. Yes, there are ill-mannered hams on HF, just like there
are ill-mannered people in all aspects of life.

>So of the 5 goals set out for the service, 4 have a technical
>basis, and one is a "feel good" sop which is largely ignored
>by our gamers with their Ugly American behavior.

Three mention some degree of technical involvement, but like
everything else, each of in itself is not an "all or nothing"
scenario. I'm quite happy to recognize that both the technical
and communicative aspects of amateur radio are equally important.

The subscribers of QST are the members of QST. Why is that such a surprise to you. If I pay my dues to an organization, I would hope it gives priority to my concerns and views. But otoh, the organization doesn't take a vote on every issue. That's why a board exists and staff. So while beliefs of the membership would naturally be heard, greater good is also important. And if they diverged the overall good of the service/hobby should be primary.

If you haven't already, consider joining the organization.

This is a myth (the idea that you can't repair the new SMT stuff without
a fortune in equipment) ... it's far more an excuse than the truth ...

> In many cases, it's cheaper to buy a new item or module than it is to
> repair a broken one.

So troubleshoot to the module level and order the module ... even that's
more like it than shipping the whole thing back to the factory without even
trying (OK, if it's under warranty and you don't want to void the warranty,
I'll accept that, but after the warranty, what the hell? Give it a try, you
just
might learn something ...)

>
> KE4IKT
>

Been there, Done that. Vhf license is of course a generic term for all amateur privileges above 30 Mhz. It is in my memory when these frequencies were called "Toy Bands" by the more experienced General and Class A operators. I also remember when the Tech license was called a "Toy License". Allong with this came disbarment from some of the more established old line ham radio clubs plus the prohibition by the ARRL of running for many elected offices as the General license was the minimum required to do it, even though the Techs paid the same amount of dues. (I think I read something one time about taxation without representation...)

Unfortunately, although, as you say, there are UHF and Microwave frequencies to explore, it seems that most VHF users settle on 2 meter FM and maybe sometimes on the UHF 70 cm FM band and I believe that this is the perceived problem that the League's committee was trying to address.

Incidentely, I was very active on all VHF and UHF bands up to the Microwave floor of what was then called the 1296 band for a number a years using all modes and many advcnced techniques. I can make the case that it takes a lot more technical expertise to operate many modes and techniques on VHF and up than on HF. Antenna's and feedlines are more complex to build and match, construction techniques are more complex, spurious and parasitic surpression techniques require more thought.

Speaking of VHF and up, I was saddened to learn that Ed Tilton, W1HDQ recently passed away. one of the formost VHF and UHF pioneers, it was my privilege to meet and converse with him several times, and to read almost everything he has written since 1938. There is a lot to be learned today from reading his articles.

That's only a part of the problem, and mostly just from a noisy minority
of true Know Nothings who are proud of their party flag. The majority
of packet users are ignorant, but ignorance can be cured. We have
fallen down on the job of educating the packet user community. Many
of the things which make packet work well are *not* obvious to those
without a background in data communications. Some of the things
aren't obvious even to those with a data communications background
(because they lack a solid real world *RF* background). We need to do
a much better job of explaining to *both* communities how everything
in packet is interrelated. Packet is unique to amateur radio in that it
demands a degree of cooperation that is virtually unknown to the service.
This is a hard thing for many amateurs to accept truly deep down on the
gut level.

Unfortunately, norms are determined by the bell curve, and that favors the
sorts of operators you and I don't much admire.

>Additionally ... the "tinker and innovate, them move on" is a bit inaccurate.

Yeah. The usual course is tinker, innovate, *burn out*, then move on. Getting
a network up and running right is a rush, but keeping the damn thing going
month after month, year after year, with little help and virtually no support
is a recipe for burnout. Eventually, most say, "enough of this crap, I'm going
to do something else."

You should have been at the TAPR Bash at Dayton. TC and Karn laid it on the line pretty clearly. They realize amateur radio is in real trouble, and that the traditional answers don't work anymore. And they're pretty sick of propping up the comatose body. They suggest, as you and I do, that serious shock treatments are needed to breathe some viability back into the service. It isn't a problem which can be solved with baby steps or gentle nudges. TC gave the mule a good whack across the head with a 2x4 to get its attention with his talk (and a pretty shocking demographic profile of what is happening to amateur radio), and then Karn suggested that the mule is living in a burning barn and damn well better get some water pumping or it'll be homeless in short order. That got some blood pumping. A few of the white haired crowd raised the traditional defenses, but that sounded more like whistling past the graveyard than something that they really believed.

These are typical Carl Stevenson "fact generation" techniques. Carl will routinely show up and start spewing "facts". When you ask him for a reference (something other than anecdoctal evidence) he'll say something like "I'm too busy" or "I'm not your errand boy", etc. If you look through the DejaNews postings from about a year ago, when Carl first showed up on these newsgroups (for someone so "technically advanced" he didn't seem fit to get on 'the net' until it was 'fashionable') you'll see several postings from him in reply to me where he basically states the same thing when I asked for sources.

[also, whenever looking through DejaNews for a previous Carl post, always make note of the "Message-ID" field to see if he posted it from work -- it should be in the format of "Message-ID: <somenumbers@cstevens.usr.com>"]

: What can you suggest?
: Peter

The best performance will be had by using a full length 1/4 wave
whip (102"). They actually look OK on a pathfinder when mounted on the
back bumper at one corner.

If you desire a somewhat shorter antenna, and don't mind mounting
it on the roof, then a base-loaded whip will perform well. There's
basically 2 kinds of these (this is oversimplified, but will give you
an idea of what's important for efficiency)

1) Steel whips about 35" long. They tend to radiate mostly from
the whip; the bottom loading coil is used mainly for matching.

2) Steel whips about 51" long. These usually are designed so that
the coil radiates some of the signal as well as the whip. They
tend to be more efficient than the #1 type. (K40 is one of many
in this class)

All bottom loaded antennas perform poorly if the coil isn't
positioned so that it's free of metal obstructions.

If you want to mount a whip off the corner bumpers or side of a
vehicle and don't want the size of a 9' whip, then I'd recommend using
a top loaded whip (your standard 4' white truckers antenna). These
antennas move the current node as far up the whip as possible which
increases efficiency, and are better able to deal with unusual ground
plane irregularities found when corner-mounting.

I've often heard references to culture and the "magic" of amateur radio belittled. But now its ok to consider morse code testing as symbol? Interesting.

I sure wish someone could tell me where this VHF only license is. I
have never seen one. I started as a Tech with a license for any mode
above 30 mhz. That includes VHF, UHF, and microwave bands.

Guess part of the problem is that HF hams don't really know much about
anything above 30 mhz and think it is ALL VHF. Maybe we need to have
re-education classes/exams for HF operators to get them into the 'new'
bands.

> good posters that it was illegal to run an amp. on CB.

Well, I'm not saying that anyone should buy an amplifier just because
damn near everyone else has one. <G>

The reality of the situation is that you need a lot of grunt just to get
across the street when the noise level is high. The standard mobile
install of a VHF-lo commercial two-way radio is 50Watts, with most
running 80W+. For VHF it is 25Watts and UHF 25Watts as well. Most
repeaters are running 50-100Watts.

If 5Watts is "good enough for anybody", I've seen no evidence of that!

Cheers!

In addition to CB & GMRS, there's the "Family Radio" Service. With
14 channels and 0.5 watts maximum.

However, even with those "No Code" radio services, I'm glad that I went
through the trouble of helping my sons to get their Technician "No Code"
Licenses. With thousands of channels to pick from and a 1,500 watt
maximum (if one is crazy enough to use that kind of power on VHF/UHF),
CB, GMRS, & "Family Radio" Service just can't compare. :-)

IMHO; Ham Radio is the better "Family Radio".

Sincerely,

Bob KF6JHG

Why not Mike??? You brand all proponents of eliminating the
code tests as "liberal welfare mentality types who want to dumb
down ham radio" ...

Your assertion that the problem only extends to 1% of hams is
patently ridiculous ... there are lots of lids on HF ... both on SSB
and on CW ...

UHH... following up my article again.

If you are in Japan, you can use HF band without CW qualifications as
follows:

Under 10MHz, power restriction 10W

Above 20MHz, power restriction 10W

Above 30 Mhz power restriction 20W

you mare NOT transmit CW without CW qualifications.

I am sure that this is accurate.

> is available.

As usual, you missed the point entirely ... I'll repeat it ... please
try to read slowly and carefully, Mike ...

That you believe and accept as fact that "the higher frequencies"
will remain unused in the absence of appliance operator rice-boxes
gives a clear view of your total lack of understanding of what ham
radio is supposed to be about ... we HAVE those bands because
it is expected that we'll tinker and experiment and create something
useful there ... if we don't there will be no market opportunity for the
rice boxes, because the bands will be reassigned to someone who

WILL use them.

Notice that I stated what's wrong ... eg: "We have something (our bands), but we're not doing what we're supposed to be doing with them, therefore we'll lose them (unless that changes) ..."

Don't give me your "rose-colored glasses" crap as a side-stepping way of trying to justify what's wrong as somehow being "OK" ... that's just your way of avoiding facing the issues ...

> >Your problem, Mike, is that to you everything in ham radio must

What I have a problem with, Mike, is the fact that you brag about your total lack of interest in the technical aspects, brag about how you passed your test without having a clue about the theory, brag about (being the poster child for) everything that's wrong and negative about ham radio, then flame me or anyone else who calls you on it ...

> >You're too incompetent and lazy to do anything but sit there and
> >operate some appliance, and admit that you haven't a clue as to
> >how to fix it if it breaks ...

No, Mike, I'm just paraphrasing and feeding your own "boasts" back to you ... if you find your own description of yourself insulting, that's *your* problem ...

> Oh, and by the way Carl, I noticed in another post of yours how you
> don't think it is the government's role to enforce a "work ethic" on

> position to condemn those people who do not make or repair their own
> equipment just because their "work ethic" doesn't conform to what you
> think the government should make it.

I'm not making any judgement WRT anyone's "work ethic" ... I'm just making an observation that folks like you who boast of having no real interest in the workings of radios and how you slithered through the cracks in the testing system really would fit better in one of the non-technical personal radio services ... since all you want to do is to *use* the radio, not understand it or any of the other "technical stuff." This is NOT a matter of "work ethic" 'cause it has nothing really to do with "hard worker" vs. "lazy bum" ... it's just that you're, by your own admission (boast, really) not interested in radio ... and that's what "ham *radio*" is supposed to be about ...

> >This assertion is yet another pro-code red herring ... there has never

Pardon me if I don't give a damn what you believe ... what you believe
doesn't change the facts ... a very substantial portion of the hundreds and
hundreds of technical professionals that I've worked with (in the RF comm
field) have expressed an interest in becoming hams ... except for or until
they findo out about the Morse code requirements ... they virtually universally
reject the code hazing ritual as a stupid, outdated, (even insulting) waste of
time ...

Nope, morse (CW) is just the coding scheme used to identify
the characters used. If anything constitutes a language
per your perspective it is the Q signals and other abrieviations
used...Not the actual coding scheme (i.e. morse code).

He doesn't want to hear it, because it doesn't fit into his neat little package of vitriol that all hams who don't spend all their time inventing new technology are lazy, worthless bastards wasting valuable bandwidth. Never mind that ten meters is idle 99% of the time, and even at the height of the sunspot cycle there are places where you can find a quiet spot for a QSO if you wish to do so.

>To bad you VHF-only folks didn't create a 220-220 club - maybe we
>wouldn't have lost 2 Mc from that band. (What are you currently
>doing to insure that further V/UHF spectrum isn't lost?)

Excellent point. The techie types on 220 were typified by the ham in Texas (I believe it was) who bought and built a monster 220 EME station, and as soon as he got his WAS on 220 he dismantled the thing, sold it, and left the band. I, on the other hand, have never seen the need to work EME on any band, but I've been active on 220 since about 1978. I helped set up the first 220 repeater in Idaho, and later, when that system got bogged down in politics, I bought a complete 220 system out of my own pocket (I live on a fixed income, so this was not a trivial expense). I built a remote base interface from scratch, and, with the help of a few friends, that system has been on the air ever since. It's open to any legitimate ham, and nobody has ever been charged a cent to use it. I've also helped finance 220 equipment for packet links.

I wonder what Carl has done to keep 220 occupied during the last two decades?

In my experience, European and South American ops have no room to
attack Americans for bad operating practices. Some of them were as
bad or worse than any Ugly American.

The Japanese were about the only group that were almost universally
well-behaved and polite in pileups.

> writes:
>
> >I've loaded both of these programs onto my PC. Which is the better
> >program for learning code?

Find the NUMorse program if you are not comfortable with DOS
programs. NuMorse is a Windows program; works fine. One feature
of Morse Academy is the in DOS, .txt files, very long ones, can
be imported, say from the internet. These then make great
practice sessions at whatever speed you are attempting. Perhaps,
better than the few minute canned sample QSO's that come with
the program.

When you get to the level where you want to learn to "read CW
in your head" a la same as a spoken language, then you will
want to spend 30 minutes or so, a couple of times a day, for
a couple of months practicing. Set the speed at about 5 wpm
faster than you can copy to paper with pen or pencil. Just sit
back and listen. Soon you will begin to catch letters, then
words. But you will congratulate yourself when you do. And
of course, miss the next several letters!! Never mind. Keep
at it, in a week or two, at a given speed you WILL be reading
the CW in your head.

As added practice, realize that you are trying to understand words
and sentences that are being SPELLED out to you, not
spoken words. If you can, find a relevant other, who might be
willing to spell words to you from a story, in the newspaper or a
magazine. Ask him to not say the words, but spell the words
to you, outload. At one per second to begin. That is a 12 wpm
speed per the Paris CW speed standard. Use a metronome, or
tune in WWV and have him speak a letter every tick of the WWV
clock. When you can understand the story easily, ask him to
try to give you two letters each clock tick, evenly. That is a
24 wpm rate!! Three per tick is a 36 wpm rate!!

You will be amazed at how quickly you will be "reading"
CW "in your head" after you can follow a story or newspaper
article being spelled to you in plain old, outloud, English
letters.

Good luck,

Jim, KH7M

> What's a Len Winkler WOG?

Hi Glen, ever listen to Len Winkler's "Ham Radio and More" radio show on Sunday afternoons? He has suggested that a tech+ be granted general privileges if he/she can pass all the written exams through extra. WOG stands for "Written Only General" i,e, a written only exam upgrade to general from novice or tech+. It satisfies the treaty and IMO, would be good for the ARS as it will probably increase the average technical knowledge level of the general class license.

Logs are introduced in the 6th grade in our school district. Plane geometry
is a 7th grade subject, and beginning trig is an 8th grade subject.

>see no need for more elaborate math than addition, subtraction,
>multiplication, division and maybe square root.

By 16, a student has had 2 years of high school math, IE he should
have completed an introductory calculus course as well as intermediate
courses in trig and elementary statistics. In some cases he'll have been
introduced to vector algebra and matrix manipulation as well. Perhaps
he isn't ready to derive Maxwell's equations from first principles (he
lacks the physics intuition), but then that's a bit more than we'd expect
an entry level amateur to be able to do.

Of course that's a student on a college prep technical track. Students
on the manual trades track may only have had commercial math, and
students on the arts and letters track may only have been taught the

bonehead math needed to balance a checkbook. The latter probably
aren't good candidates to become amateurs.

>For a higher license more is certainly required.

One would hope so.

>multiples and sub-multiples of these units.

That's 4th grade level. A 4th grader should be expected to handle the basic
arithmetic functions, including manipulating fractions, and understanding units
of measure. He should be gaining an intuitive grasp of dimensional analysis
by this point, IE he should understand that dividing apples by oranges is a
nonsense concept. The units used have to make sense in the context in
which they are applied.

>b) Candidates must be familiar with compounds of symbols.

That's implied by (a) above.

>c) Candidates must know the following mathematical concepts and
>operations:
>
>- adding, subtracting, multiplying and dividing;
>- fractions;
>- power of ten, exponentials;
>- squaring;
>- square roots;
>- inverse values;
>- interpolation of linear and non-linear graphs.

That's a start, but the candidate *should* also understand logs and
the common trig identities, have a grasp of qualitative and quantitative
geometry, at least of the plane variety, and have an elementary idea
of the calculus, IE knowledge of limits and simple differentiation and
integration concepts.

>d) Candidates must be familiar with the formulae used in this syllabus
>and be able to transpose them.

Basic algebra. That should be assumed as a given.

>After this the recommendation goes on for 20 pages to define what
>(radio)technical and regulatory knowledge the candidate should have.

It would be interesting to see this.

>IMO. it is a good idea to define the minimum talents a candidate
>should have before even starting to make a question pool. Note that
>HAREC A/B is the requirement for a full power pan-European licensing.
>There was also an attempt to define an easier novice/entry level
>specification (HAREC C/D), but this attempt was aborted, when it
>became clear that the requirements and privileges for the entry level
>license varied greatly from country to country, so the entry level
>license is not interchangeable from country to country in Europe.

Note that I think this is a good idea, IE defining the prerequisite knowledge base expected of potential applicants. It would appear that the European expectation of mathematical knowledge is a bit weak for a technical pursuit, however. I find that somewhat surprising since European schooling is typically portrayed here as more rigorous than US schooling. A fluency with math is a requirement for anyone hoping to pursue a technological course, and amateur radio is one of the more technological avocations the average person can pursue.

Parenthetically, I noted the statement attributed to Newkirk that the ARRL Handbook is addressed to the 10th grade level. From my reading of the Handbook, I'm inclined to think that must be the 10th grade level of the manual arts track. The Handbook strikes me as being more on the level of an 8th grader on a science and technology track. That says something ugly about the technical level expected of US amateurs by the ARRL.

>it is expected that we'll tinker and experiment and create something
>useful there ...

I didn't mis-read your paragraph, Carl. I'm merely stating a truism.
Bands will not be used until there is commercial gear available for
them. That doesn't negate your statement that bands are there for
pioneers; it merely states that since a large number of amateurs are
applicance operators you cannot expect people to use bands until
commercial gear is available for them.

>Notice that I stated what's wrong ... eg: "We have something (our
>bands), but we're not doing what we're supposed to be doing with them,
> therefore we'll lose them (unless that changes) ..."

Well, it would seem to me then that you should be interested in
getting as many of your engineering buddies licensed as codeless
techs, up there on those bands, pioneering the next generation of
amateur radio, rather than wasting your time trying to get them
access to HF with a codeless HF license, where they'll sit and yack
on SSB all day.

>about (being the poster child for) everything that's wrong and negative
>about ham radio, then flame me or anyone else who calls you on it ...

Ummm. No, Carl. That's not what I said at all. I did state that I
passed the Extra theory examination after two days of review of the
question pool, as an example of how pathetic the question pool concept
towards licensing amateurs has become. Of course, since I don't hold
an Extra-class license, the test is meaningless in the scheme of my
existing license class. Other than that, you have no idea what my
technical capabilities are, what my interests are, or what my activities
in amateur radio happen to be.

>> >You're too incompetent and lazy to do anything but sit there and

>This is NOT a matter of "work ethic" 'cause it has nothing really to do
>with "hard worker" vs. "lazy bum" ... it's just that you're, by your own
>admission (boast, really) not interested in radio ... and that's what "ham
>*radio*" is supposed to be about ...

No Carl, that is what *YOUR* vision of ham radio is supposed to be all
about. I, on the other hand, see a dramatically different version of
aamteur radio -- one where dedicated, hard-working people give up hours
of their time to perform selfless acts such as passing MARS traffic
for our men overseas.

If you think that is "slithering" (more personal attacks, Carl?) then
so be it. However, it is going to be the emergency and public services
aspects of amateur radio today which is going to save our bands. A
bunch of technical geeks with slide-rules running around saying how
if they orient this piece of silicon with that little electrolytic
thingy over there they can improve power output 10% isn't going to
cut it. The powers-that-be and mass public can't support that vision,
because its something out of a Revenge of The Nerds Part IIX movie.
People can support "normal" people -- doctors, security guards, homemakers,
retail clerks, the list is endless -- "just like them" who are involved in
providing a useful, necessary service to the community. Rather than knowing
how to wind a coil, instead, amateurs today need practical skills on how to set
up an emergency communications station, coordinate an emergency
communications net, and most importantly, know how and when to shut
the hell up and LISTEN.

>I don't give a rat's ass about your "incident at Dayton a few years back"

Of course you don't, Carl. It was the start of the "slow code" movement,
and proves how the interest in a codeless HF license is being driven,
partially, by the equipment manufacturers.

> >sco@sco-inc.com

Still too complex and does not address the ongoing discussion (problem?)
of attempting to solve the situation of the two distinct communities of
hams, the VHF and the HF operators. It should be remembered that this
discussion began with the ARRL Committee's finding that these separate
communities were a detriment to the long term stability of Amateur Radio.
There is also a connected discussion concerning the need for CW testing as
a "filter" function to see who gets the holy grail privilege of HF
operation.

I still think that as long as VHF only licenses are issued, the main
concern of the ARRL Committee will never be solved. It also seems that
most posters to this newsgroup think that 6 classes of license is
extreme.

I have suggested a license structure that took all of the Novice,
Technician, and Technician Plus licensees and put them into a single
license bracket (third class, apprentice, you pick a name) with all VHF
and a good measure of HF priviliges ecompassing all modes of operation.
(frequency, getting around the CW requirement on HF, and maybe power level
restrictions to be worked out) Then all of the General, Advanced and Extra
licensees be put into another license bracket (some proposals are calling
this a standard class) with all amateur privileges. Alternatively, there

could be a third class of license called the Master Class or the First Class which would have elements of the present Advanced and Extra requirements and maybe carry with it some additional priviliges. Although there would be no code test needed for the Apprentice class of license, there would be one needed for the Standard class (maybe 10 WPM) and for the Master or First Class (maybe 13 WPM) as well as increasingly comprehensive theory and operating skills testing) I have also suggested a waiting period for entry into the highest class of license if one is adopted. (2-5 years)

Although most of the ARRL members still support the CW requirements for HF operation, I have to wonder whether most of the licensed hams actually support it since the most popular way into ham radio is via the codless Technician license. The ARRL membership is maybe 30% of the licensed hams, but the ARRL is the only viable national ham organization that has an ear in Washington on regulatory matters. Although there are calls in this newsgroup for a new and different organization, I personally do not think it would get off the ground. I remember back in the days of incentive licenseing when Wayne Green of 73 magazine (with a national audience) attempted to start the Institute Of Amateur Radio. It was a failure. The best hope of changing the league from what seems to be perceived as a good old boy, cut a deal in the backroom network to one that may be seen as more responsive to the membership, is through the election process.

It is my personal opinion that the ARRL has changed considerably from the incentive licenseing days. This was probably more out of self protection than anything else after it was realized what kind of destruction this had on Amateur Radio as a whole, but for the most part, these changes have made the ARRL more responsive to its membership over the years.

>line is false ... it's a service.

Come on Carl, all the word service means with respect to amateur radio is "an administrative division of government". The citizen's band is also a service. Whatever you intend by using this term would also apply to CB and tow trucks. If you intend to draw any distinction, then refer to the charter for the service - not simply to the fact that it is a service.

Perhaps you entered the "service" solely for altruistic reasons, but I must admit that I did not. I became a ham to discover what's in it for me - to have fun with it, and to learn. I also participate in some activities which might constitute a public service, but I am at least willing to admit that those activities are not the reason I became a ham, nor do they comprise a major portion of my radio activities.

You might as well give up trying to make someone believe that we are all in this to provide a "service" to someone. I don't think they'll believe it. They know we're doing this for the same reasons that people build model railroads, and collect stamps. Perhaps that's why they decided to call it the _Amateur_ Radio Service.

Pretending we are something else will fool no one Carl. As long as we continue to also make ourselves useful in times of need, and continue to improve our ability to do so, we will more than hold up our end of the bargain.

There aren't enough "experimenters" to occupy even two meters, much
less all the VHF/UHF/microwave bands where we currently hold
privileges. You need "appliance ops" to fully populate and hold those
bands.

Pardon me if I think you're making this up, or embellishing it
substantially.

The fact is that no matter what you think of code, the alleged "waste
of time" is no real barrier to anyone who has any significant interest
in becoming a ham. It's just a convenient excuse for those who don't
have a real interest in Ham Radio. In that very specific and limited
sense, CW *is* a filter against those who probably wouldn't contribute
much of value to the hobby.

>> >I refer you to Deja News ... one of the VEs posted some statistics recently.

>have.

This is totally absurd. There is more *free* information available to the average experimenter today than ever before. And there are a number of free, or very inexpensive, design tools available to the amateur today which were undreamt of a mere 20 years ago. With the wide availability of cheap and powerful VLSI components, designing and building advanced equipment is easier and faster than it has ever been. And it doesn't take a techno-genius or a huge industrial lab full of equipment to do it either. Most of the areas where amateurs can contribute require only tabletop science levels of investment. A sound grasp of the fundamentals of information theory and signaling design are required, but that's not beyond the grasp of any interested person with a high school education (or even somewhat less if the person is motivated).

As example of that, when I was a high school student I built a radio telescope capable of detecting solar noise and noise from the galactic core. It was a real bitch to do that with tubes (I managed to wheedle some 416Bs from Western Electric for the preamp), and it took a year to get it functional. Today, I could whip together a more sensitive setup in an afternoon using modern components, and it would cost less too. I wouldn't have to beg for special parts made of unobtainium, I could use common off the shelf components available in normal commercial channels (or even scrounged from consumer devices).

Most of the advances in communications of late have revolved around better signal designs, and better processing of those signals. This is tabletop stuff, ideally suited to cottage industry or the radio amateur's bench. Most of it involves

coding of off the shelf processing components. That requires a reflective mind and a computer, whether it is done in a corner of the spare bedroom or in a cubicle of some conglomerate. The amateur is on nearly an equal footing with his industrial counterpart. And the amateur is free from pressures which would prevent him from poking into areas the mainstream has bypassed. This is where the really innovative and breakthrough ideas are to be found in any field of research. It's where a lot of dead ends are found too, of course, but the amateur is uniquely blessed with the freedom to fail again and again as he explores the roads less travelled while his industrial counterpart cannot afford to fail because his livelyhood depends on meeting a schedule. Thus the amateur has a very real advantage over the professional in exploring the areas where breakthroughs are most likely to be found.

>The future of amateur radio is going to be in appliance operation. There
>will always be some technically-oriented people, but they are a minority.
>The majority will be communicators. They will be enhancing international
>goodwill through long-distance communications. They will be providing
>emergency communications at local disaster sites. They will be doing the
>public service work. The extent of their knowledge will be "how do I set
>up a remote base station", and how to solder a PL259 on a piece of coax.

In other words, glorified CBers. You've made it quite clear that's *your* vision of amateur radio. Sure, being a communicator is *part* of being a radio amateur, but unlike CB, GMRS, or cellphone operators, the radio amateur is supposed to be *more* than that. He is supposed to understand the whys and hows of radio communications technology so that he can implement more effective systems than mere operators can field.

>>Not so ... all that infrastructure is vulnerable in disasters ... hams can
>>AND DO still contribute ... but virually ZERO part of it is in or depends
>>in any way on Morse ...
>
>Morse is primarily a long-distance, interactive communication mode. You
>don't generally use morse for an across-town contact. (Sort of like using
>a hammer when you need a wrench). Short-distance communications are usually
>FM, and long-distance traffic passing is usually packet. You use the
>correct tool for what you are attempting to accomplish.

Actually, packet as presently done, is not a good way to pass long distance traffic. Clover, or one of the TOR modes, works much better. Packet is best for handling short range logistical traffic on VHF/UHF. Packet is the tool of choice for the LAN, and sometimes the MAN, but it isn't well suited for WAN use due to design limitations of the present implementations.

Morse is of practically zero usefulness in present day emergency communications networks. It is simply too slow, error prone, and ad hoc compared to the better alternatives available. No credible emergency response system includes Morse in its planning anymore. Its use is limited to amateur gaming, or other recreational communications, where limited throughput and high error rates are tolerable (and even *preferred* because it makes the contest more "sporting").

>>You make the classical misake of the technically backward (or even of
>>those who ar otherwise technically savy but fanatical about Morse) ... to
>>assume tha "just because it's 'digital' means it uses a keyboard" ...
>>digital systems can be used to transmit voice, pictures, and many other forms
>>of information besides just keyboarded text ...
>
>Digital systems today in amateur radio = a keyboard. That's life.
>
>Yes, digital can do other things.... None of which are applicable in
>amateur radio today.

We've been running digital voice over our 56 kb systems for some years
now (and with newer codecs we can even do it at 2400 bps, and occupy
less bandwidth than a SSB signal while being much more resistant to
channel errors). However, in general, the amateur community does seem
to think digital means keyboard today. That's symptomatic of a lack of vision
(except in the backward sense).

Look at how quickly the record industry turned from the LP to the CD (even
the name "record" is somewhat of a misnomer today). The switch to digital
happened astonishingly quickly. In ten years the record player changed from
being the mainstay of a HiFi setup to an antique curiosity. Digital technique
can do the same for amateur radio too provided we don't let the luddites
among us continue to saddle us with rules and attitudes which would restrict
its use to such a degree as to make it useless to pursue.

We need to be looking 10 years down the road rather than just looking at today's
practices. Otherwise we may be saddled with still scratching a needle across
vinyl in a few years while the rest of the communications world pulls further ahead
of us. Note that we are less than 2 years away from terrestrial broadcast DTV,
and DSS is already eating into the analog cable monopolies. The communications
world is changing rapidly, and amateur radio had better be preparing to change
with it. WRC-99 will be setting amateur rules in place which will have to carry
us decades into the 21st century. We have to think carefully about the kinds of
systems we may be using decades from now, and start crafting rules to guide that
development right now. And most importantly, we have to start shaping attitudes
which foster that development rather than hinder it.

>>Can you maintain reliable links day in and day out from say Atlanta to
>>say Indianapolis and Denver with a MAXIMUM power output of 10 milliwatts???
>
>Wow. So, these digital modes also create propagation where none exists?
>I didn't realize that digital was the solution to sunspots. I'm a convert!

It is actually quite rare for *no* propagation to exist on the mid-HF frequencies
along continental paths. Often the propagation isn't very stable or very strong,
and those using manual methods might be tempted to think that no path exists,
but they'd be wrong.

>>You'r talking about "CB with an attitude" now ... the service always has
>>been *supposed to be* focused on the technical side ...
>
>Wrong, wrong, wrong. 60% of 97.1 deals specifically with

>>OPERATING<. Only 40% of 97.1 talks about technical pursuits. Thus,
>by the FCC's own definition, we are a service of operators.

Well, actually, the FCC's definition of the service is in 97.3(a)(4) which
says "Amateur service. A radiocommunications service for the purpose
of self-training, intercommunication and technical investigations carried
out by amateurs, that is, duly authorized persons interested in radio
technique solely with a personal aim and without pecuniary interest."

This is almost a verbatim match with the ITU definition of amateur radio.
Note that there is no question that technical investigation is technical.
And there should be little doubt that the self-training is also technically
based. Intercommunications is grouped with technical investigation
(note the lack of a comma) and is, as is explicitly noted in the ITU
version, to serve to facilitate the technical investigations amateurs
are to carry out. Clearly, the majority of this definition addresses the
technical nature of the service.

Now 97.1 sets out charter goals for the service. Lets look at them.
(a) addresses voluntary emergency communications. That's a
worthwhile goal, and all radio services share it to one degree or
another. To be *effective* in that role, amateurs need to adopt
the most effective methods available to them. That requires
technology. So this goal indirectly addresses the technical
nature of amateur radio. (b) directly addresses the amateur's
role in advancing the radio art (note art is used here in the
same sense as Industrial Art, and is an archaic legalistic
way of saying *engineering*). This is clearly a technical
basis for the service. (c) addresses self-training in the
communications and technical phases of the art. Obviously,
to serve the nation, methods and techniques *relevant* to
current communications needs are to be stressed. Again
this is a technical issue. (d) calls for expansion of the national
reservoir of trained operators, technicians, and electronics
experts. There can be little doubt that this too is primarily
a technical challenge to the amateur service. And (e) is
the sop to "goodwill" which amateurs so poorly obey.

So of the 5 goals set out for the service, 4 have a technical
basis, and one is a "feel good" sop which is largely ignored
by our gamers with their Ugly American behavior.

>>That's illustrative of the major problems that face ham radio today ...
>>stagnation, apathy, and the "it's just a hobby" idea promoted by
>>the competitive games folks ...
>
>Goes to show you how little you really know about amateur radio.
>The "competitive games" folks don't consider contests a 'hobby'.
>Serious contesters are there to >win<, plain and simple, the same
>way each participant at the Kentucky Derby is there to win.

Indeed, and it is this cutthroat competition which belies the charge to improve international goodwill. And it is this cutthroat competition which ill-prepares the gamers to respond in a cooperative manner when their communications services are needed.

It is said that "racing improves the breed", and there is some truth to that. The intense competitive gaming does serve to drive some of the technologies we use. One result of the intense and otherwise ugly and disruptive pileups of the gamers has been development of receivers with much improved third order intercepts. So the gamers do serve a technical purpose. They act as a test load for our equipment designs.

I think it is clear that the doomsayers are operating from flawed technical
premises. And the bulk of the resistance by frequency coordinators is
driven by a dog in the manger NIMBY attempt to protect their vested
interests in warehousing spectrum for their (mostly idle) repeaters.
I say that as a repeater owner myself (and it is one of the busier ones
in this area, yet it idly occupies a pair of channels for most of every
day). Much as we might like to homestead a permanent exclusive claim
to frequencies for our repeaters, Part 97 prohibits us from doing so.
We are *required* to share (see 97.101b).

>I wish there was a perfect answer -- I wish that we could post to usenet

>changes, let's talk about what incremental step in the right direction
>can actually be accomplished today.

That's an unrealistic attitude. If we permit SS on 2m, we do *not* have
to immediately shut down all existing NBFM operation. For the most
part, the NBFM operator will never notice that there even *is* any SS
activity going on. For DS systems, *worst case*, the NBFM operators
may have to tighten their squelch a tiny bit, or do what they should be
doing anyway and go to CTCSS access control. For FH systems, CTCSS
is also a cure to any interference problems which may arise, though *fast*

FH shouldn't even kerchunk a carrier squelch system unless the carrier squelch being used is unreasonably fast. The two methodologies *can* coexist. (And SS can coexist with narrowband techniques on HF too, while bringing the users of SS several major benefits.)

Now the tiny bit of rise in the noise floor caused by SS operation may be troublesome to weak signal operators, unless they adopt SS techniques themselves, and there are compelling reasons to do just that since certain SS techniques can be superior weak signal methods (for example, SS can help defeat libration fading on the EME path). But we *can* deal with the narrowband weak signal operators another way. In the first place, there aren't many weak signal operators and they tend to use narrow emissions and crowd onto narrow segments of the band clustered around their calling frequencies, thus we can simply program those frequencies out of our sequences and give them a sanctuary area in which to operate. Again, they need never know we are on the band.

Note that we need pretty complete freedom to choose and modify our SS techniques to accomplish successful sharing. As long as we operate under crippling SS rules, we can never adopt those techniques, and SS *will* cause problems for other operators (and vice versa). This is the danger of creeping gradualism in rules reform. We won't make the quantum leap to the techniques which really can share successfully. We'll wind up in the trap packet has fallen into, with entrenched outmoded techniques acting as a brake on systematic improvements. (I often think it would have been better if Bell 202 modems had never appeared on the surplus market and thus defacto locked us into a paradigm from which we can't seem to extricate ourselves.)

>other than I want to be sure that whatever is decided is not unduly
>influenced by one rather vocal ARRL staffer taking a firm public stand.

I hope amateur radio will survive to see that LONG run outcome. But I am fearful it will not. As I said in another response, it isn't the Code testing per se which is the problem, it is the attitudes it symbolizes. I don't see a gradual evolutionary solution to that. In fact, current evolutionary theory doesn't support gradualism, evolution is driven by sharp shocks to the environment. I believe amateur radio needs such a sharp shock today. Striking at the luddite symbol could be such a shock.

Those who attempt to appease everyone, satisfy no one. Often, as
with Chamberlin and Hitler, such appeasement causes more harm
in the long run than sharp action applied early would have engendered.
What we need is leadership which isn't afraid to lead, and which has
a strong sense of the direction in which amateur radio needs to be
going. I think TAPR has that. To a large degree, I think AMSAT has
that. I don't think the ARRL does. The ARRL took a wrong turn in the
1960s, and it has never recovered its bearings from that debacle.

>ideas to amateur radio.

I'm afraid I have to agree with Carl here. ARRL pubs have been increasingly
dumbed down at the same time that the technology has been advancing. At
one time, most every RF engineer had a copy of the Handbook on his shelf.
That's no longer true. Not only is treatment of the material further from the
SOTA today, it has also been watered down to the point it is often misleading
to the technically naive. Thus it has become the worst of both worlds in its
mediocrity. I think that the Handbook needs to treat its subjects rigorously,
and leave the introduction of the rank beginner to a separate publication
which is clearly labeled as a simplified introduction, with suitable cautionary
statements that it lacks the precision and depth of explanation of the real
processes being addressed. The Handbook, and other ARRL technical
publications, should *challenge* the reader to improve his understanding
rather than pandering to a perceived inability of the average amateur to
comprehend the material.

>>Morse has outlived the point where it should be
>>a 'skill' required to obtain an amateur license with full HF
>>priveleges."
>
>This is truly the crux of the questions at hand. If we could stick to
>it, rather than discussing who is a cretin and whether someone who
>supports code testing fears technlogy, I suspect we could find an answer.

Unfortunately it all ties together. Morse testing is a powerful *symbol*
of a reactionary view of amateur radio. It is that symbolism which is
the most damaging thing about Morse testing, not Morse's technical
inadequacies (which have been well documented), or whether it
remains a relevant licensing requirement to meet legitimate government
concerns (which IMHO it doesn't either). It is an albatross around the
neck of amateur radio, and like that dead bird, it tends to stink and drive
away from the service many of those we would like to attract, keep, and
foster.

We're losing the young bright minds we could be influencing to other
pursuits. And it isn't the code testing per se which is causing that, it
is the attitudes which cluster around it. I don't think we can break the
grip of those attitudes while the albatross of Morse speed testing
remains as a rallying symbol.

Hams have successfully used both programs to either increase their
speed or learn morse code. My suggestion is to use both for a week,
and then choose whichever one you like, register the program and
enjoy the code if you can. Both have features which some hams love,
and both also offend the sensibilities of some other hams or potential
hams. The only correct answer is whichever one works best for YOU!

I think that Novice should be VHF/UHF No CW, General should have 10 WPM CW
and all of 10, 15, 40,and 80 meters plus VHF/UHF as above, and last of all
Advanced should have all bands, all modes allowed plus 15 WPM CW. Best 73

>Gary Coffman KE4ZV | You Make It | Email:

After WRC-99 I think the only justification for keeping any CW exams
will be to test those hams who wish to operate in "new" CW sub-bands.
And possibly we (the USA) may wish to preserve CW Ham history by
having a 5 wpm code exam for some new purpose (or endorsement to your
ham license).

Somehow the idea that the CW bands have little current activity and support has grown up incorrectly. Look at the OH2BUA web page or watch the packet spots and anyone can see that there is a vast amount of Cw activity. Dxpeditions usually make half their Q's on CW and some are almost 100% CW except for 75, 17, and 12 meters (ZL1AMO, DJ6SI etc). Even 160 gets full for a contest. During the CQ 160 CW contest in Jan the cw stations stretched from 1.800 to 1.880...So far nearly 5,000 different calls have been noted!.

40 Cw in the evenings USA now carry about 50% of all intercontinental Q's and about 25% of all night time HF activity!

I don't see any change in activity in the CW bands after WRC 99 no matter what...and the FCC probably will not make any changes beyond some revision of the recent ARRL proposals. The CW bands are active (especially the lower 50Khz) so they will not be allocated away.

The facts are no matter what happens to the international CW requirement the CW allocations will continue and the FCC code requirement will remain (at a modified level perhaps). Removing or cutting the requirement does not eliminate or outlaw CW.

->
->The key word in 97.1(e) is "international". You might be a
->VHF-only operator so you probably interpret that as meaning
->using AT&T or MCI, but to HF hams, "international" equates to "DX".
->
->I note that you used the word "Hams" in your post; I can't find any
->mention of that word in Part 97. But just as we interpret "ham" to
->mean "amateur", we interpret "international" to mean "DX".
->
->73 (that means "best regards", Marty),
->Jeff KH2PZ / 7 (who has been "extending international goodwill",
->i.e., "working DX" via CW for 21 years)
-
-And I see that you have been unable to support your statement that the
-word DX is in Part 97, so instead turn to insults and personal
-attacks.

That's because the "DX" doesn't appear in FCC Part 97. Besides the
meaning of "DX" is different from band to band. 2-meter DX might
mean 250 miles away, where 15-meter DX might mean 5000 miles away.
160-meter DX might mean the next state over.

-What 97.1 states is to "...promote international goodwill...". Making
-the band sound like 11m does exactly the the wrong thing.

I don't think 11-meters promotes much of anything other than the
way it shouldn't be done.

-Most of the operators in other countries that I have spoke with think
-of the US "DX Chasers" as the ultimate example of bad operators and
-get quite a chuckle out of the fighting that starts from the pile ups.

I'll agree with you 100% here! I have a friend in Tonga and several
Christian missionaries in Indonesia and India with whom I speak quite often
(when the bands are open.) There are many times when someone will just
blurt out "CQ DX..." right in the middle of what OBVIOUSLY is an ongoing QSO.
Occasionally we will break away and take a few callers but will NEVER take

one who has interrupted our QSO. We ignore them. Some see this a rude
and "robbing" them of a good DX catch. But for some reason manors go right
out the window when there is a "rare" DX at hand. Americans are not the
only culprits of this but tend to be the worst. I would agree with
another post that the Japanese seem to be the most polite.

-The various contests are even more entertaining. Sort of like the
-Saturday night WWF show on TV!

I think it's more like watching "Sally Jessie" than WWF.

> US Government who has granted that license.

"Be" a service is not the same as "providing" a service.

FCC defines three amateur radio services in it's rules.

"§97.3 Definitions.

a. The definitions of terms used in Part 97 are:

1. (clip)

2 Amateur radio services. The amateur service, the amateur-satellite service and the radio amateur civil emergency service.

3 .Amateur-satellite service. A radiocommunication service using stations on Earth satellites for the same purpose as those of the amateur service.

4. Amateur service. A radiocommunication service for the purpose of self-training, intercommunication and technical investigations carried out by amateurs, that is, duly authorized persons interested in radio technique solely with a personal aim and without pecuniary interest.

5. (clipped)
thru
34. (clipped)

35. RACES (radio amateur civil emergency service). A radio service using amateur stations for civil defense communications during periods of local, regional or national civil emergencies.

Of the three defined amateur radio services, only paragraph 35 (RACES) sounds like "work". The other two sound like recreation to me.

This is not to say we shouldn't provide a service when we can, and in fact one of the reasons were are well treated in allocations is our unique ability to provide communications services as a complement or replacement for other means in "public service" and disaster recovery situations. That capability is recognized in 97.1(a) and certainly events here in the Dakotas and Minnesota this spring also thoroughly demonstrated that capability, but that does not

mean that every licensee who was not part of that effort should turn in their callsign either.

The suggestion by some that a licensee should hang his/her head in shame because they only "intercommunicate" or carry out private "technical investigations" is not born out by the Commissions definitions of the service.

>Carl - wa6vse
>wa6vse@fast.net

The reason for this "segregation" is to prevent the SSB operators from
interfering with the CW operators and visa-versa. CW is allowed
on all parts of all amateur bands and you don't have problems with CW
operators going into the phone bands and causing trouble but I'd be
willing to bet the farm that if SSB was allowed on all the sub-bands
and CW was allowed to operate only on certain portions, like SSB is now,
that the reverse wouldn't be true. SSB would be heard everywhere. Why
isn't CW heard everywhere? Would this mean that CW operators are a bit
more considerate?
As far as our "Hispanic brethren to the south" go, I don't think that
the Mexican government much cares what they do as long as they pay
their money to get the "license."

HF is divided into voice/image and data sub-bands.
There are no CW exclusive sub-bands on HF. CW
operators tend to congregate in the data segments of
HF, but they have no exclusive claim to that spectrum.
This will present a problem for your plan unless you
expect to *create* new sub-bands specifically for CW
operation.

The only CW exclusive sub-bands in US amateur radio are
50.0-50.1 MHz and 144.0-144.1 MHz. And you don't have to
pass a Morse test *at all* to access them at present. Fancy
that.

>amateur radio use in the HF bands starting in the year 2000.

Since over two-thirds of the 127 ITU treaty countries favor the retention of the Morse code proficiency requirement in the ITU radio regulations, you've got a problem. The requirment will live long after the year 2000. It could potentially live until 2100, but by then, I don't think there's going to be anything like an ITU anyway. The whole concept of the Amateur Radio Service itself probably won't outlive the international treaty Morse code requirements.

>Since cw is a mode so linked with the history of ham radio I would
>like to think of a way to promote its limited use and continuation as
>a valid mode after 1999.

Well, thank you for your concern, my friend, but the Morse code will have no "validity" problems post-1999. If any part of amateur radio has a validity problem post-1999, it will be in the enormous amount of HF spectrum being given over to RF rednecks on the phone bands!

>One way might be to create a CW endorsement for ham licenses? The code
>exam could be used to see which hams can use cw in which cw sub-bands?
>That might be a way to help preserve cw after it is no longer required
>in order for a ham to get a HF license. This should help the cw
>operators who wish to preserve cw as a mode of operation for the
>future.

The CW bands, and the CW operators, will take care of themselves. We'd better figure out a way to justify all the spectrum being used to support the pandemonium which presently defines HF phone operation. Just think of what it would be like if the numbers of HF phone 'consumers' were to virtually double overnight? The ITU countries who oppose elimination of the Morse code proficiency requirements know what the consequences would be, and want no part of it! They also recognize the inherent benefits of CW operation, and wish to continue to exploit these benefits in the future. In other words, they're thinking rationally!

>In the past the FCC has not shown that it likes endorsements.
>Therefore perhaps we need to think about creating a CW ONLY license
>that would be good for HF and VHF/UHF/Microwave cw sub-bands?
>I have no idea what we would/might call the license. I am sure there
>are some good names out there and some funny names, etc.

The only thing funny is this whole proposal. The funny part is that
you're worrying about the WRONG mode! It isn't CW that is in
jeopardy of being flushed down the toilet, it's HF phone!

>Is there some legal reason anyone knows of why a ham could NOT hold
>two licenses at the same time? Say a General Class or Extra Class and
>a CW Class license?

Other than the fact that its unnecessary, I can't think of any reason. If
you hold an Extra-class license, you automatically hold all lower-class
privileges, and so on down the line. If you think the answer to the
no-coders troubles is to separate the CW privileges from the licensing
structure, forcing a two-track licensing scheme, the FCC will NEVER
go for that. The point is to reduce their administrative burdens with
respect to the Amateur Radio Service, not increase them. Your
proposal is a non-starter.

If I were you, OM, I'd seriously be thinking of an alternative hobby if
the HF code requirements were to be dropped! The only hams left
who will still be able to have any good, reasonably satisfying, and fun
communications will be the CW operators! The phone bands will be
a completely unusable mess! Think about it! The problem isn't that
CW doesn't filter lids out, it's that putting a microphone in front of
the average ham usually CREATES a lid! As a CW operator, I'm not
worried about what may happen in 1999 -- but I'm concerned about what
got started when SSB was invented! Ham radio has been on a
downhill slide ever since! It seems as though the power of the
microphone has never failed to corrupt the users of that device!

>Note that in addition to "W" and "K", the USA has "AAA - ALZ" and
>NAA-NZZ allocations -- assigned to Hams and Others (MARS etc)

Also, Canadian Hams have call letters starting with "V".

However, there _is_ a "meaning" associated with call letters.

In a book about semaphore flags, I read about how sequences of one to three flags stood for words or sentences (sometimes with one blank word to be filled in - apparently that has been changed in the latest version of the International Code of Signals) but *four* flags stood for the identification of a ship.

Well, many of the allocations for those letters, by country, were very similar to the current allocation of radio call letters!

So, in the early days of radio, the radio telegraph on board a ship was identified by the ship's semaphore 4-letter code, and then the system of call letters for radio stations was made consistent with this.

Actually, Canada and Mexico only get part of the C and X blocks. And they do get some parts of other blocks. CA-CE belong to Chile, and XY and XZ to Myanmar, for example.

>In a book about semaphore flags, I read about how sequences of one to three
>flags stood for ... Well, many of the allocations for those letters, by country, were very similar
>to the current allocation of radio call letters!

Interesting! That's the first explanation I've read to suggest why the USA got K and W. Most other major countries got letters that in some way represent the name of the country - F for France, G for Great Britain, J for Japan, etc..

Incidentially, with regard to the W broadcast calls in Texas, they all have been around for quite awhile. The W/K dividing line was originally the eastern borders of New Mexico/Colorado/Wyoming/Montana, so some early stations got "caught" between the old and new borders.

KDKA was a one-time glitch; the government changed its callsign policies, then changed them again a month later; only three broadcast licenses were issued in that period and the other two stations promptly went belly-up. KYW indeed moved from Chicago, but that still doesn't explain where it got a K call. KQV in Pittsburgh is another one I can't really explain.

I have for sale an Icom IC-2AT 2 meter HT in excellent condition
Comes with the standard wall charger, manual, nicad pack
Also have the IC-CP1 mobile charging cord, IC-HM9 speaker microphone, and
the IC-DC1 DC-Converter
I have all the original boxes for everything and will take $125 plus
shipping
I can be reached at (508)-821-2993 or e-mail

this is what I am talkjng about before.

If you wanna send out CW, take the CW qualification.

If not, then open HF to no-CW license holders, but make a restriction
such that one may not transmit CWs without CW qualification.

It's going to happen [HFs for no-CWers].
In Japan, you can already transmit under 10 MHz, above 20MHz without
CW. It's going to happen.

Well quite a thread we have going here. Didn't mean to imply (but guess I did) that the Texas stations "W" calls were "new" as I recall hearing WOAI 1200 kHz San Antonio, TX way back in the forties on a Hallicrafters S-40B, my QTH then was Ohio. And what was the Mexican station that blanketed the US -- XERK -- Del Rio, Tx Studios ?????

Jeff Miller's Broadcasting History Collection at URL:
http://members.aol.com/jeff560/jeff.html
has a lot of historical info including:
Requested call letters of the 1920s
Which was the first radio station? (1970)
U. S. radio stations as of June 30, 1922
..
..

U. S. radio stations as of 1946

Westinghouse claims KDKA was the first BC station, see:
http://www.wireless.westinghouse.com/
but that is in dispute -- see URL:
http://members.aol.com/jeff560/who1st1.html

Jeff Miller's Pages substantiates the location mix-up of K and W stations from earliest assignments to the present. Was a lot of them, then and now looks like. My error on this point, KDKA always bombed into Ohio and I always wondered why they had a K call!!

Those interested in "clear channel" AM stations will find info at URL:
http://pw2.netcom.com/~ac6v/pageau.html
Courtesy of Neil S. Adams

For today's AM/FM/TV Broadcast station lists see URL:
http://206.114.196.37/amdb.html
It gives AM/FM Database Search Page -- By Call Letters, Frequency, City/State/Province, Metropolitan Areas, Longitude/Latitude -- Resembles the old "Whites Radio Log" of yesteryear. Any one remember White's?? Twas the AM DXers Bible.

As to the first assignments being derived from shipboard calls -- could be, interesting.

As to W = Wireless and K = Kordless -- here in San Diego -- its Whiskey and Kaluaha -- Drink it in Continental US -- Wake up in Honolulu!!!
(Grin |:) Grin)

Good DXing -- be it AMing or HFing
Rod in San Diego -- Bound for Hawaii!!

A nit perhaps, but KYW was located in Cleveland, not Chicago, for quite
a while prior to moving the callsign to Philadelphia.

This file has been redone to hopefully make it readable again via e-mail.
I had an electronic copy of the QST text and thus developed my own
response
and sent the response on the date shown. -- Fred NY2V -- 1997-05-28

To: Ms.Kay C. Craigie, WT3P, ARRL Atlantic Division Director
cc: Members of the ARRL WRC-99 Planning Committee
cc: Other influential Radio Amateurs interested in the Restructuring
Proposal
Date: February 19, 1997
Subj: Fred Adsit NY2V's Comments on Article By David Sumner, K1ZZ
published in "QST", March 1997:

>Member Comments Sought on Licensing Structure

NY2V Comments:
I prefer to comment on a statement-by-statement or paragraph-by-
paragraph basis, thus maintaining organization and ease of under-
standing. A survey would have been preferable to just seeking
member comment. Better yet if the whole process had never been started.
The use of the ">" as used in packet and some e-mail is employed herein
to separate ARRL statements from my commentary.

I have not quoted proposal sections with which I agree or which appear
redundant.

>While most of the discussion surrounding the work of the ARRL WRC-99
>Planning Committee and its membership survey (QST, Feb 1997, p 54)
>swirled around the issue of the international requirement for Morse code
>testing for operation below 30 MHz....., the committee also discussed
>concepts for the simplification of the amateur licensing structure in
>the United States and for additional HF digital privileges for Novice
>and Technician Plus licensees.

NY2V Comments:
The trigger here is "additional HF digital privileges...etc...". Although

the Committee later proposes a somewhat more difficult examination to
attain a merged Novice and Technician Plus license with the proposed name

of Intermediate Class, I see no reason to grant any additional
privileges.
The bottom line, right here at the top, is that the ARRL is disturbed by
the split which has developed in the ranks, and the decreases in
licensees,
license upgradings, ARRL membership, and equipment manufacturer
complaints

of poor sales, especially of HF equipment. It is all a matter of money. Why and how we got into this jam, and how to reverse these trends, will be
addressed. Nothing will be gained by making it even simpler to obtain HF operating mode or spectrum space privileges. We have seen the benefits reaped by creating the Technician and Technician Plus licenses - they are

minor benefits at best, unless one considers a license to communicate on VHF, and nothing more, a benefit. The entire system of licensing and nature of exams has made it simple to attain licenses and privileges, with little sacrifice needed to do so. We are reaping the consequences.

>From the Committee Report

>The Committee reviewed the evolution of the licensing structure for the
>Amateur Radio Service in the United States and concluded that the Novice
>Class license, while extremely beneficial at an earlier time, is no longer
>useful.

NY2V Comment:
You should have left the whole proposal at this: Merge active Novices into
the Technician Plus class.

>The Committee identified a growing concern about the development of two
>separate amateur communities, one active on the HF bands and the other
>active on VHF and higher frequencies. Although some amateurs are
>participants in both communities, for a number of reasons, fewer recently
>licensed amateurs are seeking to participate in both. The Technician Plus
>license is not presently succeeding in introducing newer amateurs to the HF
>community.

NY2V Comment:
What we have now is the desire for instant gratification, the perceived difficulty of Morse Code, the effect of Internet communications, and the simplicity of getting a Technician license, the latter having been heavily
promoted by the ARRL. The Technician Plus license from an HF point of view
is no different from the Novice license. Both involve slogging along in Morse Code at 5wpm, since 1951 in the case of Novices. One can find little
of interest in such a modus operandi. Although huge numbers of hams progressed at least to General Class, the bottom line is that one must copy and send Morse Code at speeds exceeding 20wpm before one can feel that
a conversation is taking place with no need to transcribe anything but notes

on paper. The Novice license per se has been a failure, as the Committee now
admits, and the Technician Plus license - in HF operation - is no different
and is thus a failure. So much for on-the-air slow-code practice. The advent
of ready-access Internet e-mail has aggravated this situation. In an era
where less effort is perceived to be ideal by society in general, the ARRL
should have been emphasizing the fact that the Internet, and for that matter,
no-code VHF/UHF communications, are not Radio technology pursuits. Clearly
the Internet is not, and the failure of Technicians to upgrade reveals the
mindset of these licensees. As a rule, they simply wish to communicate.
This is only part of Amateur Radio as it is defined by the FCC's Part 97
Regulations. Thus far, the FCC has not seen fit to redefine Amateur Radio

for what it mainly now is - a personal communications service.

>The additional operating privileges gained by upgrading from Technician to
>Technician Plus tend to isolate Technician Plus licensees from other HF
>license holders and do not provide an adequate sample of HF operating
>experiences, particularly when the sunspot numbers are low. As a result,

>newly licensed Technicians are not upgrading at the rate that might be
>desired, and may abandon Amateur Radio before they have adequately explored
>the opportunities available to them.

NY2V Comments:
The advent of Internet e-mail for the masses, and the Web Effect, and a
coincident null in the sunspot cycle, have made HF seem much less
attractive. This is pure coincidence. The Sun is about to rectify its part
of it. As for exploring opportunities, the Committee is leading us right
into the try-before- you-buy (so to speak) concept of allowing "Technician
Plus Plus" (Intermediate) Class licensees to use huge portions of 80, 40
and 15M, and even parts of 160 and 10M. Currently, one must upgrade to
General Class to earn a taste of this. Now the plan is to dumb down amateur
radio and let a ham who has learned less than a General Class licensee and
who has not passed a General Class code exam go right ahead and use
substantial portions of three of our best bands. This is totally
unconscionable. The dumbing down of amateur radio has, finally, attained a
formal definition in the form of this Restructuring Proposal.

>The Committee noted that there is a well-documented learning plateau in the
>vicinity of 10 words per minute. The large step from 5 to 13 words per
>minute thus represents a significant barrier to upgrading.

NY2V Comment:
Hundreds of thousands of hams have advanced to well beyond 13wpm and have

experienced no barriers to passing the code exams. The plateaus are Not
"learning plateaus". The only plateau is the one a person reaches when it

becomes difficult to transcribe to paper what is being received. This
occurs somewhere in the vicinity of 27 wpm for the typical human being,
although we know that with practice, many have far exceeded this limit.
Some experts say that 27wpm is a good conversational speed. Since that is

well above the highest-speed code test we administer, we can stop talking

about the myth of learning plateaus. We can coincidentally discard the idea
that advancing from 5wpm to 13wpm is so difficult compared with 5wpm to
10wpm that the barrier to upgrading to General Class is overwhelming. This
is unscientific and illogical bunk. Hams have been proving it since 1936
when the jump was from Zero wpm to 13wpm. They did it. I did it. We all
did it. Case closed, not that I am done commenting on it.

>At the same time, comments addressed to the Committee documented a
>significant concern in the amateur community with the existing Morse code
>testing process.

NY2V Comment:
Abuses do exist. They range from copying nothing on paper and correctly
guessing 7 of 10 multiple choice answers all the way to obtaining
unwarranted medical waivers. More on this later.

>The Committee observed that the Morse code requirements for different
>classes of amateur license ought to follow a logical progression. The
>Intermediate Class Morse examination is proposed to be Element 1(A), 5
>words per minute. The General Class Morse examination is proposed to be
>a modified Element 1(B), 10 >words per minute.

NY2V Comment:
There already Is a logical progression, except for no Advanced Class code

test. As for 10wpm, I covered that. I have long insisted there is an agenda
here. The ARRL's member survey contained the long-anticipated entrapment
question, with that answer "10-13wpm". This alone rendered the survey
unprofessional and unscientific.. Now, after numerous public statements
made by the highest officers of the ARRL supporting the concept that the
Morse Code is outdated, we find ourselves staring at this restructuring
proposal with its illogical and unjustifiable proposed General Class code

test reduction from 13 to 10wpm. Even New Zealand's ORACLE group has declared this, in view of US theory exams already having been dumbed down,
an unacceptable move. In the longer term, history may repeat itself. At one time it was proposed that a 16wpm Advanced Class code test be given. It did not happen. However, This time, the gap between 10 and 20wpm may be
eventually deemed too large. Having lowered the General standards to 10wpm,
a logical step could be lowering the Extra to 15wpm. This would evolve into tacit approval of lowering code speeds, and, in subsequent filings, one would see the code speed dropping to zero for all license classes. There simply is *no* provable, demonstrable benefit in lowering the speed

from 13 to 10wpm. There is absolutely *no* justification, be it scientific,
technical, or from polls of membership sentiment at the Division level, to
even consider such a proposal. Given that the question asked in the recent
survey was deliberately rigged, per the beginning of this lengthy comment,
consideration of a 10wpm test has no justification whatever. Keep it at 13wpm and cease riling up the ham population. Also, In the future, it would
behoove the officers of the ARRL to exercise great care in speaking as representatives of the ARRL (us members), not as advocates of their personal
views. It just might defuse the ongoing heated debate and attract newcomers
willing to make a small sacrifice to join up - as a ham - and as a member of
the ARRL. The bottom line is the dollar sign. If that is, and it *is*, the
ARRL's problem, then level with the membership as was finally done in March 1997 "QST". Do not come up with unwanted proposals, particularly ones
of this type, which lead to even greater divisiveness than the ARRL is concerned about. Ham radio is going through difficult times due to poor judgment on matters such as not continuing to promote the technical aspects
of the service. More on this in my closing comments....

>The Advanced and Extra Class would remain as at present [ie, no additional
>Morse examination to go from General to Advanced, and an examination at 20
>words per minute to go to Extra].

NY2V Comment:
Here I wish to propose merging the General into the Advanced Class, since

there is no code test associated with the Advanced Class license, and no resultant code spectrum privileges. Grandfather Generals to Advanced, thus
in part resolving the longstanding complaints about what happened in the Incentive Licensing era. The 20wpm Extra test speed should remain the same,
and provides a logical almost perfectly-spaced upgrade progression of 0, 5, 13, 20. This takes us from six to four license classes. I believe this
to be a change worthy of very serious consideration..

>Examinations for all three elements should be revised to include a sending
>test and a return to the requirement for one minute of solid copy during a
>five-minute receiving test period.

NY2V Comment:
It seems the FISTS CW Club and VE complaints got a hearing. We thank you all for that. Once this is implemented, guesswork will be eliminated. We will rest assured that the applicant could, at least when taking the exam,
send and receive at the requisite speed. By making sure of this at exam time, we might find ourselves with as many Morse Code enthusiasts as we used to have before the code test was dumbed down. [VEs may get into debates about sending quality. FCC examiners simply pushed a 3X5 card of text in front of you and as soon as it became evident you could send at the requisite speed and be understood, that part of the test abruptly ended.
One should be allowed to use a keying device of one's choice, i.e. the one
likely to be used in one's station - be it handkey, semi- automatic key, electronic keyer with paddles, or a Morse keyboard. The VEs should provide
only a handkey and permit the person being tested to adjust it to suit. Examinees should furnish any of the other devices, preadjusted to suit them.]

>The Committee also noted great concern in the amateur community about
>perceived abuses of the handicapped waiver provision, and urges that steps
>be taken to reduce the opportunity for such abuses.

NY2V Comment:
I agree. I have two great stories to tell here. The first was a fine gentleman named Lawrence Burley, who (this is not fiction) took the 13wpm

code test dozens of times before he passed it, and only then because the exasperated FCC official permitted Burley to state out loud what he could

not legibly scribble on paper. He had passable, albeit choppy, sending techni
que. And he passed, at last. Mr.Burley lived in Osceola, PA, had a radio

repair shop plus a station he could not use, and was a legend in his own time. True story number two: Advanced Class WA2INV is a quadraplegic who spends most of his life lying face-down. He passed by using his voice to demonstrate receiving And transmitting ability. Not being a doctor, I have
a very difficult time dreaming up reasons for code test waivers other than
having diseases such as palsy which cause uncontrollable shaking.

>As will be discussed below, phasing out the existing Novice bands on 80,

>40, and 15 meters is essential to achieving other objectives; therefore,

>it is not practical to maintain the Novice as a sixth class of license
>with its existing set of privileges, but for which no new applications
>would be accepted.

NY2V Comments:
The chief "other objectives" are 80, 40 and 15M digital privileges.
Let us drop this a moment and go back to this concept of dumbing down the

test requirement to permit exploring HF using an Intermediate Class license.
Logic does not prevail here at all. To do this, said licensee would have to
invest in HF equipment. This equipment would be little different - if at all - from that needed to pursue General Class operating privileges. My previous "try-before-you-buy" statement, you see, should be called "buy before you try", and the class of HF license matters not one whit. I urge

you to think on this. A lot... Moving along, one committee member referred
to HF digital as a "niche" mode. Well, frankly, that is true. So what's with
this business of giving digital privileges to hams with less than a General
Class license? They can already use digital (packet) on VHF and up. Most do.
They will really be miffed to find out how slow HF digital modes are, what
with the bandwidth limitations...

>The features of the Intermediate Class received extensive consideration.

>With the elimination of the Novice license, the frequencies that are
>presently assigned for Novice and Technician Plus CW operation would become
>available for other uses.

NY2V Comment:
Since I propose only Morse Code privileges should be afforded an Intermediate Class licensee, and since the impact on the CW and Data portions of the three affected bands would be horrendous were

Intermediates
allowed to operate especially on the 80 and 40M frequencies proposed in the
next section, I submit that the Novice bands should be retained as-is.
Rename them Intermediate bands if you will, but do not eliminate them, and
do not, on the 80, 40, and 15M bands involved, give added frequencies to
Intermediates. My Director said that many slow-speed code nets do not
operate in the Novice bands, and thus the Intermediates would have no access
to them. Well, instead of "refarming" the entire subbands with this
dumbed-down HF entry proposal, simply negotiate with the slow-code nets and
convince them to move into the Novice (Intermediate) subband where they
logically belong. If the ARRL Field Services Director were on the Committee,
I would hope he would point out the wreckage of the NTS that would result

by pushing phone frequencies farther down into the 80 and 40M bands.

>This will make it possible to achieve some modest expansion of the HF phone
>bands of all HF licensees.

NY2V Comments:
With my concept, Generals will have as much phone space as Advanced. Extras
would retain their extra 25KHz of both phone and code. Elaborating on the

impact of moving phone subbands downward: 50KHz is a significant subband,

and squeezes the CW and digital allocations another 25KHz. Ever since I
became a ham in 1948, the Canadians have moved their phone bands down as we
moved ours down, pushing their phone operation into our CW bands. It is a

bit miraculous that the Canadians have - now in the absence of Any
governmental control of mode vs. frequency - maintained a gentleman's
agreement and not moved much farther into our CW bands (although they Are

using parts of our downward shifted Novice bands). With all but Tech
licensees freely roaming the CW bands, and with Extras getting 25KHz more

for phone, the Canadian track record I have brought up will undoubtedly
result in a new backlash resulting in pure bedlam..

>The Committee followed the principle that while the Intermediate Class
>should include meaningful phone and digital privileges in various parts of
>the HF spectrum, the most narrow and crowded bands should not be available.
>The Committee reached consensus on the following proposed set of HF operating

>privileges:
> Frequencies (in kHz) and modes:
> CW Digital Phone & CW
>160 meters:
> -- -- 1950-2000
>80 meters:
>3525-3700 3600-3625 3900-4000
>40 meters:
>7025-7050 -- --
>15 meters:
>21025-21150 21100-21125 21350-21450
>10 meters:
>28050-28300 28100-28189 (SSB) 28300-28500 (FM)
29500-29700
>Transmitter power: 200 watts PEP output maximum (other licensees using
these
>bands would not be limited to 200 watts).

NY2V Comment:
With my counterproposal, the 160M and 10M allocations might be
acceptable,
but the others would not, since I support Novice subband retention. Re
the
power limit, it should be 100 watts. 200-watt commercial transceivers are

ultra-expensive and are unlikely HF-entry-level appliance choices.

>The following adjustments to the phone bands of other HF licensees are
>proposed, made possible by the elimination of the Novice bands:
> General Class: Add 3800-3850, 7200-7225, 21250-21300 kHz
> Advanced Class: Add 3725-3775, 7125-7150, 21175-21225 kHz
> Extra Class: Add 3700-3750, 7125-7150, 21150-21200 kHz
>Thus, each of these license classes would pick up 50 kHz of additional
phone
>band on 75 and 15 meters, and 25 kHz on 40 meters.

NY2V Comments:
My previous objections apply to these detailed subband expansion
proposals.
With Intermediates not being allowed to use phone on HF, and with
Generals
having double the space on some bands (as they did have for a time), most

everyone except perhaps Extras should be very happy. The Extras mainly
take
advantage of their existing 25KHz bottom-of-band CW privileges anyway.
Taking 75 phone as an example, the Canadians occupy the supposed US Extra

phone segment. On 40M, SW broadcasters occupy everything above 7.1MHz.
(in
the cases of 40 and 10M, we may soon see a downward shift in one and an
add-on to the other anyway - so why tamper now? Just wait.

>Some Questions and Answers
>...........
>The answers represent the thinking of the author and not necessarily the

>rest of the committee or the Board.

NY2V Comment:
Mr. Sumner's example Q & A's provide a vehicle for some appropriate
comments.

>Q: Doesn't the proposed reduction in General and Advanced code speed
from
>13 to 10 words per minute amount to a lowering of standards?
>A: One problem with the existing code tests is that the standards are
not
>consistent. Whether an applicant passes or fails may have more to do
with
>the design of the test, ie, whether it's true/false, multiple choice, or

>fill-in-the-blanks, than with their Morse code ability.

NY2V Comment:
Dumbing down from 13wpm to 10wpm had to do with Morse code ability,
didn't it?
In any event, it certainly does amount to a slight lowering of standards,
and
is based on myths about "plateaus", as I discussed previously. If the
applicant correctly copies the text, the above answer is ridiculous...

>Q: How did the committee come up with the list of privileges for the
>Intermediate license?
>A: It was thought best to leave the HF bands with the greatest scarcity
>value -- that is, the narrowest and most crowded bands -- off the list.
>That principle applies to 20 meters and the narrow bands won at WARC-79:

>30, 17, and 12 meters. It would also apply to 40 meters, but Novice and
>Technician Plus licensees have CW privileges in this band and the
committee
>did not want to eliminate an existing privilege. (Access to 25 kHz below

>7100 kHz was thought to be reasonably equivalent to the existing
privilege
>of 50 kHz amongst the high-powered international broadcasters above 7100

>kHz.) Some might argue that the principle also applies to 80 meters, but

>this band is wider, there is some elbow room during the daylight hours,
and
>it offers an opportunity to get involved in public-service
communication.

NY2V Comment:
Most of this I covered. On the last item, find me a phone traffic net
that
is in trouble finding space on 80M (they DO have trouble on 40). Net

frequency choices will be simpler under my proposed General/Advanced merger.
The evening 80M CW nets do not, except for the slow-speed ones, accommodate
hams crawling along much below about 18wpm. Those who acquire speed from the
slow nets move up when they feel comfortable. It has been working well for
years. NTS and ARES/RACES public service opportunities dominate on VHF, where many hams are fortunately deeply involved. On HF, slow-speed traffic
nets are working fine.

>Q: This is a start, but you didn't go far enough; five classes of license
>are still too many.
>A: As reported in the survey results last month, the vast majority of
>members think there should be at least three classes of license. There was
>no consensus that the "right" number was either three, four, five, or six.
>The committee did not interpret the survey results as a mandate for radical
>change.

NY2V Comment:
What? This officially proposed dumbing down of ham radio is radical in the
extreme. The mandate for this travesty is a decrease in the attractiveness
of Amateur Radio as a technical hobby and service, and an even more devastating decrease in the number of hams deciding to join the ARRL.

NY2V Closing Comments:

1 - The ARRL committee is persistent in the 10wpm issue. The issue has no

merit. We will not settle for promises to further discuss it. That will lead
to convenient oversights in the future, with nothing offered and nothing delivered. We deserve a full disclosure of why this has been, for a long time, a matter the ARRL feels compelled to force into FCC law. If it goes

through, the ARRL should be prepared for much criticism to follow, along with having to suffer the consequences of its actions.

2 - Merging Novice Class with Technician Plus class has merit all on its own. Eliminating the Novice bands has no merit whatever. It works hand in

hand with dumbing down the entry-to-HF test requirements and resultant operating privileges. Merging General and Advanced Classes does make sense.
The exam could be slightly longer and geared to the Advanced Class level.

Frankly, honoring this subject with details of methodology is ludicrous, since the exam answers are rote-memorizable (ie: the written exam system has
already been dumbed down and the code remains the only HF entry filter, although it too is currently dumbed down via the multiple-choice answer system which, finally, the ARRL now agrees is a highly imperfect measure of
knowledge.).

3 - Four license classes - Basic (no code/no HF), Intermediate (5wpm w/ current Novice privileges), Advanced (13wpm) and Expert (20wpm) - with no

changes in subbands other than the returning of phone segments to Generals -
will work and cause the least disruption.

4 - Await NTIA progress and any that can be encouraged by the ARRL in gaining as much as 900KHz of HF space for Amateur use. Allocate the bands

or band additions after they are offered to us. There is, of course, one caveat - we must be perceived by the FCC as deserving these HF frequencies...

5 - A tall order: Return the ARRL to the standard-bearer of technical excellence in the radio art. Return to teaching the basics - basic technical knowledge of electricity and electronics, elementary radio circuitry, antennas, propagation, and operating techniques in an astounding
number of modes and situations. (The ARRL can say that the VE question pool
covers all this, but again, the answers are 100% rote-memorizable, thus making it possible to be a ham and not be able to solve an Ohm's Law equation). Promote ham radio for what it used to be: a technical avocation
and a public service, of which one can be proud to be a government - licensed member. A high-quality avocation requiring one to engage in some

real learning Will attract enthused participants.

At this juncture, I would like to quote something Doug DeMaw recently

wrote me:
"The ARRL continues to use "technical advancement" as justification for lowering the code requirements. Technical advancement will occur only if the League returns to the business of providing tutorial and practical technical articles in QST and the Handbook. Driving down the highway and talking into the palm of one's hand via a repeater does not cause, nor has
it caused any amateur to be inspired toward the technical aspects of our pastime. "

6 - Foster the use of computers as technical equipment in the ham radio station and as an operational tool. Push this hard - it will attract the young. Also, however, do not knuckle under to the "transceivers are too

hard
to build" syndrome -- Just as it is instructive to read the detailed
manuals
provided by our most-respected US manufacturer of ham transceivers, it
would
be equally so to regularly see such information in QST articles.

7 - Maintain and defend public service, especially in the Year of Public
Service. Refute the myths that we are no longer needed. That is and will
continue to be an invalid assessment, and the public should know that
they
will, not, in severe emergencies, be able to depend on cellular networks,

any landline networks, and often anything but emergency power. The public

should be aware they can depend on us, as always. The communications
infrastructure cannot be economically built to handle infrequent extreme
loading. Hams always step in when this occurs (many times annually).

8 - Whip up enthusiasm for Elmering and showing off our activities. No
other
hobby or service offers so much. The image we project - a valid image -
will
attract those who truly are interested in Radio technology and Radio
communications. It remains a modern challenge. We can return to being the

conduit for U.S. hams choosing electrical and electronics and radio
engineering as a career. We can reestablish ourselves as sources of new
equipment designs without looking to the Pacific Rim to find them. I
became
an EE because I became a teenage ham. I learned and I love Morse Code.
Nobody every told me it was easy, but nobody ever touted it as something
I
could seek to conveniently bypass, such as certain ARRL handouts
effectively
do. To me and to many old-timers, and to some newcomers, it is a badge of

honor and pride to be proficient in Morse Code. Those who chose or choose

not to use it are not qualified to criticise it. The dogged determination
of
CW operators to retain our present testing system and operating
privileges
is a testament to that of which I speak. We equate Morse Code with
Amateur
Radio, and most of us who use it will admit it remains almost a religious

experience. We do NOT want it dumbed down, and NO ham worth holding a
license wants operating privilege access dumbed down. It is a symptom of
a
sick society to want more for less. We must not knuckle under to this
syndrome. We are in this mess because we allowed it to happen. All we
need

do is set high standards and demand they be met in order to be one of the

elite - a US Government-licensed Amateur Radio Operator.

Mr. Sumner ends his article with these statements:
> The changes discussed in this article are not ARRL policy;

NY2V Comment:
Not officially... but look who is on the Committee...

> ; there is no timetable for completion of this process.

NY2V Comment:
I think very few will address this proposal in any detail, pro or con. By

not making this a survey (a dumbed-down opinion poll), very few will
spend
the time it takes to respond thoroughly and logically. This may well lead

to the ARRL justifying a proposal to the FCC in the near future.

Thank all of you for taking the time and effort to read and analyze my
comments.

As I close this, I am monitoring a Canadian SSB station working DX
on 7.045.60 MHz. .....

>In Japan, you can already transmit under 10 MHz, above 20MHz without
>CW. It's going to happen.

Yup. In Japan, they're also limited to regional contacts and also have
a power limit of something around 25 watts too.

We have something similar here in the USA. Its called "CB".

If we are talking an automobile related collision of sorts, the eyeglasses were probably lost at some point in the collision. I have gone back to an auto and looked for the spectacles of some one. You can get all their injuries stabilized, and get them transported but if concious, they will be raising sand about their glasses! So, we go back to the scene, or the impound lot, and continue our "Public Service". Also, if you ever take an EMS exam, you will find a lot of the questions or problems with several "good" answers, but none of them are effective, or feasible in the Real World. No to situations are exactly the same...

I am French. I am going this summer to the USA (NY and Philadelphia).
My uncle is a ham radio. He would like to get some information about
this product : MFJ-259 SWR Analyzer.

- Where can I find it in NY or Philadelphia ?
- What is the price ? Do you have any adress which sells them at the
lowest cost as possible ?
- What is about V.A.T. ? Especially when you export a product from
the USA to France ?

Thanks for all the information you can give me.

> reflects the views of non-members.

Sounds like a fairly cynical view. If true there could be no effective
organizations who elect their members, either private or governmental.
While effective group dynamics vary its not an either or proposition.

What's also not either or are the views of hams on any particular subject.
CW testing is a good example. There are many and varied ideas of what is
the proper way to deal with this. From the extremes to the concensus
builders. Such is politics and life.

> If ARRL fails to reflect MY concers and views, then I will not pay dues to
> the organization. I don't insist that everything be done MY way, but I
> feel that they are too far away right now for me to support.

Of course that is your option. But then in effect you are saying do it my
way or I won't participate. If there are thousands who share your views and
expressed your views then if would be foolish to ignore your views. But as
in the political process if you don't vote, don't gripe. Well, ok, go ahead

and gripe but without much credibility (you in the group sense, no flame intended).

That's a false choice of your creation. It needs, IMO, to be dynamic and embracing of intelligent change. These newsgroups reflect how difficult it is to determine what the "voice of the Ham Radio community" is. BTW, do you have any idea how many licensed hams are "active" vs "inactive" and the breakdown by reasons? I suspect that might put the representation of the ARRL into clearer perspective. My understanding is that historically, memberships in formal organizations is seldom of a high percentage in any endeavor. Does your experience differ from that observation? Just like the small core group who does most of the work in (fill in the blank). Much easier to stand on the sidelines and complain rather than pitch in and help... Oh no, i just flashed back to our local hamfest...heh

People criticized the recent arrl opinion survey. But who's stepping forward with a "better" one to determine the community norm? If there's a bias then thousands of new amateurs joining and electing officials will adjust that bias...assuming they markedly differ from it which is not certain.

> I have been an ARRL member. I might join again some day, if . . .

The question pool can be a computer program. The source for the program and the data files would be available. The program could fill in different values each time for formula questions as well as some of the ones on regulations. This would not affect the technical content of the questions, but it would prevent applicants from learning only the answers to the questions in the book.

4035. NH Hamfest Flea Market and More, June 1

The Contoocook Valley Radio Club is having its annual Amateur Radio
and Electonics Flea Market on Sunday, June 1, starting at 8 AM.
Take New Hampshire Interstate I-89 exit 7, Davisville, and follow
the "HAM" signs 1/2 mile east on Route 103.

At 12 Noon is a General Merchandise Auction to benefit the CVRC.
There will be furniture, electronics, garden tools, a Cape Cod
get-away, and more up for auction.

This is all adjacent to a general merchandise flea market, so there
are activities and a snack bar for the whole family.

Talk-in on 146.895 -600 /R.

This is the second generation of the original file that was
a regular USENET posting entitled

"rec.radio.amateur.misc Frequently Asked Questions"

The NEW Ham Radio.FAQ is a HyperText document that is on the
WWW and it contains 3 chapters plus hundreds of LINKS to radio
related sites!

1 - Introduction to the Ham Radio.FAQ
2 - Amateur Radio Organizations, Services, and Data Sources
3 - Amateur Radio Advanced and Technical Questions

Please provide a copy of the Ham Radio.FAQ to any new or
soon-to-be Hams that you know or share with them the URL to this
site:

http://www.mv.com/ipusers/wd1v

Send me an EMAIL <or packet with your Email address> if you want the
FAQ text file sent to you as an attached <120 K> file with the words
"HAM FAQ" on the subject line.

Send me a formatted disk with SASE disk mailer if you want the
FAQ text file sent to you on disk. PC or Mac are fine.

73,

FREE - BRAND NEW Macintosh HAM TEST SIMULATORS

Upgrade Fast!

S I M U L A T E the test and get S T I M U L A T E D!

Studying for the ham tests and have access to an Mac? If it runs System 7.XX
and has 4 Meg or more of memory, you're in business with WD1V's Ham Test
Simulators, Morse Programs, Ham Radio.FAQ, and superb "how to study" material.

The newest Macintosh Ham Test Simulators are HERE (and THERE if you can FTP)!

WWW http://www.mv.com/ipusers/wd1v

Or you may obtain a version "6" Ham Test Simulator by mailing me a *FORMATTED
disk HD disk (1.4 M) and include a Self Addressed and Stamped disk mailer for
the return. Specify the test you need.

Simulator Name Version Valid Until

Advanced Ham Test 6.0 June 30, 1998
Extra Ham Test 6.0 June 30, 2000
General Ham Test 6.0 June 30, 1998
Novice Ham Test 6.0 June 30, 1997
Technician Ham Test 6.0 June 30, 1997

Your comments and suggestions for future versions are always welcome.

ATTN: PC and other platform users:
^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^
My Home Page also links to sites that offer live ham test simulations right
over the net - plus links to Ham Radio.FAQ and VE session schedules.

Good luck with YOUR next test!

4038. Macintosh Ham Radio Users Group = Macnet

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-28 00:00:00 UTC
From: john@wd1v.mv.com
Message-ID: <john-2805970611100001@wd1v.mv.com>
Source record: 197293
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.space

There is an informal group of amateur radio operators that use Macintosh computers called "Macnet" with > 800 members world-wide.

We stay in touch with each other via packet & Internet and we have a HyperCard stack that tells the story of each of us called "Macnet Roster" that list

o CALL SIGN @ HOME PBBS
o FULL NAME
o Street ADDRESS
o CITY, STATE, ZIP
o INTERNET ADDRESS
o MACS USED
o RADIOS USED
o SOFTWARE USED
o PASSIONS
o COMMENTS

Macnet members can then communicate with one another directly or use our Macnet Moderated Mailing List to pose comments or questions to all of us on the Net.

To join Macnet, put YOUR INFO (via EMAIL or via disk using TEACH TEXT on a formatted disk in a self addressed and stamped disk mailer that is in a large envelope clearly marked "ROSTER").

Or connect to our home page via the WWW http://www.mv.com/ipusers/wd1v

-------<sent to all new Macnet Subscribers & Macnet Roster Updates>---------

Welcome to Macnet!

A trip to my home page also reveals there are many superb files and programs for amateur radio operators that want to use Mac computers. See more details in January 1997 QST, page 100. http://www.mv.com/ipusers/wd1v/

* Ham Radio Test Simulators - where you can go from Novice to Extra Class practicing the actual tests right on your Mac! Check out the info on the new NO CODE license or scramble your neurons and learn Morse on the Mac too!

* Macnet Email Reflector - send an Email to all Macnet users on the Internet.

* Macnet Roster - a virtual "Who's Who" HyperCard stack with > 800 entries giving the names, addresses, phone numbers, of radio operators all over the world that are using Macs. Check out their projects and

their passions and put a design on your Mac Radio future. See what neat things are being done with Macs and Ham Radio!

* Mac Ham Radio Software Listing - as the name implies, its "The List" of the latest - much of it with FTP links so what you see is what you can get your new programs with just a click.

* Ham Radio.FAQ - compiled on a Mac with a lots of links to great Mac FTP sites for radio, electronic engineering, and similar data.

This group has thousands of members. How many does your new group to save
amateur radio have?
>
> That's a crock of shit Fred ... NONE of us have EVER suggested (and most
> of us have publicly come out against) any "ban" on the *use* of Morse in
> the ham bands ... we just want your damned fraternity hazing ritual
stopped.

Well, you couldn't prove it by your blatant emnity towards the mention of
the words morse code or cw, or the FISTS club. But perhaps noone should
judge you by your name calling. You seem unable to control that flaw.
However, you don't exactly engender trust. Whatever happens with these
issues, I truly hope we never find intolerant people on either side in
control of something so important to so and in so many lives.

BTW, actually, though individual members of FISTS may be very political
regarding the morse testing issue, the organization itself is not intended
to be political. Its for the enjoyment and promotion and use of cw on the
amateur bands. Sorry you feel that's such a threat to you...

>Volunteer Examiners to conduct, whenever possible, traditional Morse Code
>examinations in which one minute solid copy of plain-text is required for
>demonstrating Morse Code proficiency at a given speed,* Encourages all

Why the wimpy one-minute requirement? Why not five minutes, or even
ten minutes? Any fool can concentrate enough to copy for a minute.
Why not go for ten full minutes of *error-free* copy? Then your cadre
of trained operators could at least pretend to be nearly as accurate
as modern techniques, even if you are an order of magnitude or three
slower.

What utter nonsense.

>If you wish to join now, simply send the fee (check payable to FISTS) to

How about posting an audit of this wonderful little game? If it is,
indeed, "the fastest growing" group in ham radio, you must be hauling
in a ton of cash. Who gets this money, and what do they spend it on?

>73 - Fred Adsit, NY2V, FISTS # 1293

Hmmm... #1293, times $15.00, equals a minimum of $19,395 so far, with
the actual amount probably a lot more. To bad the No-Code folks are
not this gullible, or I'd start a No-Code club and start raking in the
dough myself.

I see in another message that FISTS claims a membership of 1600.
That's not very many for a "fastest growing" group, but it adds up to
a cool 24 thousand bucks, not counting renewals.

I hold a Grade 8 in Piano from the Royal Conservatory in Toronto, obtained when I was 15. For that effort, along with also having passed a written Grade 2 Theory examination, I was granted a Grade 13 credit by the provincial education ministry in accordanace with their standards at that time. I was by no means a child progody, but to obtain that credit three years in advance of the norm was notable - there were only two of us who were granted such a credit at that age for that year in the Windsor, Ontario area. In fact, it was on the strength of that that when applying for admission at various institutions, I was accepted at the University of Windsor (in Windsor, Ontario, my hometown) in their music program. I declined the acceptance and pursued a technical education. (I am not bragging here, I just wish to establish my bona fides.)

I disagree with the notion that learning the Morse code is like learning to play the piano or to type.

I took a typing course while studying for my piano exam. I was close to failing, it was the only course that I took in which I did not obtain an "A" grade.

The skill set required for Morse code and for playing the piano are completely different. For example, a musician does not just play notes, but conveys emotion and expression to the piece that he/she is playing. On the other hand, the epitome of Morse code transmission is to send the characters to the greatest extent possible, in conformity to the ITU standard. No doubt that individual quirks, the "fist", of the operator are apparent despite striving for perfection. Indeed, it was the recognition of the fist which was often used for identifying agents in Nazi-occupied Europe in WW2. But, to extend the analogy, the musician has a fist, so to speak. But unlike the Morse code operator who strives to perfect that fist to the greatest extent possible in conformity to a standard, the musician makes every effort to put his own stamp upon the music that he is interpreting. Indeed, such deviation from Morse code transmissions would likely obscure the content of the message.

I must admit, I had one heck of a time with learning Morse code in the job I had at that time. I had to do it (30 words per minute plain language, 25 wpm coded groups for five minutes each perfect copy), otherwise I would have been forced to leave my employment at that time (now that pressure!)

Considering my difficulties with typing and learing the Morse code, I am sceptical of the notion that learing Morse code is like learning typing or playing a piano.

73 and live better digitally
Jim, VE3XJ

blah, blah, blah... yada yada yada... Same old shit.

All these technical elites don't need to pass a 13/20wpm code test to
technically innovate. They can do it today with a codeless license.

The only reason you blab about a codeless HF license is that you and your
buddies want to get on HF and blab around the world using SSB like everyone
else on HF.... You're not fooling anyone. If all your engineering friends
wanted to be amateurs, innovating today on "those bands the FCC gave us"
(I refer you to your other posting where you state this about our UHF+
bands..) they would already be hams today.

>Interesting that that which you pro-coders all oppose (no-code) is the
>ONLY thing that reversed the downward spiral ...

What downward spiral? Amateur radio has always seen a modest, albeit
small, growth. The only downward spiral is the vortex between your ears.

Yup... I didn't study "extra theory" (not that there is much extra
"theory" in the extra exam). I merely memorized the question pool in
two days, took the test, and today if you asked me a question that
was on it, I couldn't tell you. Your point is what, Carl? I'm not
an extra-class licensee, nor do I intend to become one.

>MARS was wonderful in the heyday of Morse ... and even more recently ...

>went on record as stating that their first, most important need was for DATA
>communications ... the point is that hams are becoming increasingly incapable
>of providing what the EMS folks want and need and that will cause them to look
>for other means of filling those needs

Naturally, different agencies have different information requirements.
However, I stand by my assertion that people need nothing more than "basic"
skills (I won't even call them technical, because I see nothing technical
in hooking up a dipole or vertical) in order to provide 95% of emergency
communications. Yes, there will always be some exceptions -- there are no
such things as absolutes, except death and taxes.

>if they
>tell some FCC or Congressional committee "Hams, hell no, those backward twits
>are more in the way than useful ... we use RAM Mobile Data, cellular, and our
>portable SATCOM terminals (and they DO) nowadays ..." we're screwed ...

The last I looked, portable satellite phones ran upwards of $3k, with a
$3/min. phone charge. I doubt many hams will be buying them anytime soon...
RAM Mobile Data's network works on packet charges, and cellular gets overloaded
in emergency situations.

>Mike, it doesn't prove any such thing ... those of us who are pushing for the
>end of code testing have not "been driven by the equipment manufacturers"

Yeah, so what? You don't look like someone who would lobby the ARRL or
W5YI to support a requirement change anyway.

Nor does Part 97 say that Amateur Radio is Recreational. We are mandated
by the FCC to be a service. Not a hobby, not recreational. Any ham who says
that Amateur Radio is a hobby is only neglecting his own responsibility to the
US Government who has granted that license. The question that I would like to
impose is this:
If the FCC were today to establish the Amateur Radio Service, would they take
spectrum away from someone else and give it us? In the climate of todays
communication boom would the FCC grant us spectrum 5, 10, 20 years from now.
If we really look at ourselves objectively, we are grossly inefficient and that
we're wasteful. We are taking for granted the very foundation that has been
laid down. There is no hobby in the Mandate. But there is Service, if we
neglect the service then we will lose the spectrum. Everyone of you who says
and believes this is only a hobby are contributing to the demise of the Mandate
of Service by the FCC. If you have your own Mandate(hobby) and the FCC steps in
and takes away our spectrum, then you are to blame. It is service that keeps us
here, it is service that will fuel the future.

Hi, Gary!

Yes, gradualism is fading from evolutionary theory (except in the public schools <g>), but in social groups it is still the preferred method of change. While I would NOT mind a sharp shock to wake up the "No Change Ever" crowd, but for the sake of most people I think a gradual change would be less painful.

As I study groups and their ways of working, I find again and again that change WILL happen. In some places it is "over my dead body", in others it is embraced gladly. My generalization from experience and study: Small changes occurring often are "better" than revolutionary change. Why? People get used to small changes, and such "evolutionary" changes become a way of life. People learn to expect small "tweaking" changes and don't sweat the small stuff.

When large or revolutionary changes take place, people get an attitude that says, "I'm glad THAT is over!" They dig in and form a newer group of "Old Fogeys" who do not want the new status quo changed.

I don't doubt that a large shock would get the comunity moving. I do not believe that it will keep the community moving. If we get a large change, we need to guard against thinking that change is over, and becoming complacent. If Amateur Radio is to survive, we need to be constantly changing as technology changes.

> 1960s, and it has never recovered its bearings from that debacle.

Good analogy, but I detect a slight flaw: Hitler was "moving", and appeasing him didn't stop the movement. Ham radio is almost dead in the water, and some concessions to the old pro-code crowd might bring a few of the more moderates into our camp and increase OUR numbers and momentum. Or, to reverse the analogy, perhaps the pro-code people need to worry about slowing down our advance by meeting us half way.

I agree that the ARRL leadership isn't leading. Their basic problem is the bane of most organizations: they work to satisfy their current members, rather than working for the good of the community at large. I hate to keep returning to church examples, but since I am a clergyman I see this all the time: A group turns inward upon itself, and contemplates its corporate navel. It ignores those outside itself in the name of serving its members. It dies. If ARRL decides to progress and look outside its own membership, its membership will gradually follow. This would be leadership.

I like what TAPR is doing, in all areas except getting its message out. Little ads do almost nothing for recruiting.

The handbook has some stuff in there that an 8-year-old can understand. It also has some technical explanations at a much higher level. The book itself is not consistant in its approach, and is hard to read. Actually, the ARRL publications need to have a flow from level to level. Perhaps they should go to a double handbook. Volume one can lay the basics and not leave the beginners in the dark. Volume 2 can be the technical manual you describe. Publish each volume in alternating years. And while they're at it, dump some of the projects and designs that have been in that book for the last 20 years . . .

I disagree -- It is the code testing per se, in addition to the attitudes. CW testing is the sacred cow for the no-change crowd. If this cow lives on, ham radio will continue to decline -- perhaps to the point of extinction.

Change now gives us life!

John,

There is a problem with this view, and it is in the very nature of the ARRL organization. ARRL has a membership. This membership has concerns and views. This membership elects its leaders from its own ranks. The leaders who diverge from the generalized views of the membership tend not to get (re-)elected. For this reason, the directors are not likely to support the greater good of Amateur Radio over the views of the current members. They make the mistake of believing that the current membership accurately reflects the views of non-members.

If ARRL fails to reflect MY concers and views, then I will not pay dues to the organization. I don't insist that everything be done MY way, but I feel that they are too far away right now for me to support.

ARRL as an organization, must choose its role. Either it is a representative of its membership alone, or it is the voice for the Ham Radio community. If it is responsive only/primarily to its members it cannot provide the unified voice. It needs to STUDY the reasons more people do not join, and learn if and how its (and its members') views are biased from the norm of the community at large. It needs to see how it is perceived by us "outsiders" and see how it can change that perception.

I have been an ARRL member. I might join again some day, if . . .

> Bob Godfried
> Bronx, NYC
> godfried@dti.net

Good Morning Bob
Not abbreviations of meaning but rather these are the callsign allocations as defined by the ITU in APPENDIX S42 which can be seen at URL:
http://www.itu.ch/radioclub/aps42.htm

Note that in addition to "W" and "K", the USA has "AAA - ALZ" and NAA-NZZ allocations -- assigned to Hams and Others (MARS etc)

For Ham Prefixes of the world -- see URL:
http://pw2.netcom.com/~ac6v/pageab.html

Was a time that K was Western USA and W was Eastern USA with the notable exception of KDKA Pittsburgh. Seems to mostly hold true today but not entirely -- some Texas stations now have a W prefix.

For a list of clear channel stations and a lookup data base for all USA AM and FM stations -- see the links at URL:

http://pw2.netcom.com/~ac6v/pagej.html#AM

Regards from San Diego
Rod (Amateur Radio Callsign - AC6V)
AC = USA, 6 = sixth call area - California, V = unique suffix

>
>KE4IKT

The reason for testing is to assure the government that you *understand*
enough to be able to operate safely and without causing harm to others.
Memorizing a stock set of questions and answers doesn't do that.
There is a concern in some segments of the amateur community that
amateurs are presently just memorizing the questions and answers
without developing the *understanding* of the material that the government
wants us to have.

That's why we want a large question pool, to make rote memorization of the
exams more trouble than simply bothering to *understand* the theory you're
supposed to know. If you understand the material, there is no need to memorize
the exam pool, so the size of the pool is irrelevant. Only if you are trying to
"cheat" by memorizing the pool is the size of the pool a factor. I put "cheat"
in quotes since memorizing the exam pool is not illegal, but it does defeat
the purpose of the exam, which is to assertain that you *understand* the
theory the government thinks you need to know to operate safely and without
causing harm to others.

A 10,000 question pool would certainly do that. And it wouldn't affect those
who take the exams in the spirit in which they are intended, IE as a test of
understanding, not of memorization. I think that even the 900 question pool
Bill mentioned is probably big enough that most people will just learn the
material rather than memorize that huge number of questions and answers,
but some others don't agree.

>it's not legal..
>
>73 -- Glenn AE0Q/V31RY

There are two ways of legally using these radios crossband. You can use them via an Auxillary control link on UHF, making them ordinary remote controlled stations (colloqually called a "remote base"). That's the sort of operation Glenn is addressing. Or you can use them in true repeater service.

Note that if you are using the radio as a crossband *repeater*, it may operate under automatic control. So this eliminates the worry about remote controlling it via UHF. In other words, your HT can be on VHF and can use the crossband repeater to access stations on UHF.

It still needs to ID of course. You can use an ordinary Morse or voice IDer unit intended for repeater usage in conjunction with a timer. Simple diode matrix or EPROM based IDer designs have been published in the amateur press, or you can buy one from any of several sources. The logic to make it ID on both bands is fairly trivial to implement. The whole thing can be done with a single PIC processor chip if you like.

As a sidenote, it would be nice if the manufacturers of radios capable of crossband repeater operation made a convienent and standard provision for connecting an IDer to their units, and implemented the required timers in their firmware. This wouldn't cost much, and would go a long way toward making it more likely that amateurs would operate them legally.

Note that when operating as a crossband repeater, *both* frequencies have to be in the *repeater* segments of their respective bands, IE you

can't hide one end in the simplex portion of the band (when operating as a remote base, you *can* hide the Auxillary control link on a UHF simplex frequency).

You need to take care in choosing these frequencies so that you don't inadvertently crosslink an existing VHF repeater to an existing UHF repeater. This will make the repeater trustees rather cross as the two repeaters lock up in a fatal embrace. Choose a repeater frequency for the HT side of the crossband repeater which isn't in use in your local area. The other frequency can also be a clear frequency, or it can be the frequency of an existing repeater you wish to access via your crossband system.

Some repeater coordinating bodies have designated certain repeater frequencies for this sort of itenerant usage. Obviously, use CTCSS access if possible to minimize the possibility of false activation of the system.

>time regularly to the task, and DOING WHAT IT TAKES!

Now in that 4 months, what proportion of your time was spent *understanding* how radios operate, and what proportion was spent conditioning your wetware to emulate a modem? Now which is more important in the larger scheme of things?

If you spent the bulk of that 4 months getting a firm grasp on the principles of radio communications, I'd say it was time well spent, and something that will equip you to pursue amateur radio intelligently, and allow you to contribute to the amateur service. But if the bulk of the time was spent in the rote mechanization of a modem, it is of little lasting value to you, or to the amateur radio service.

It may be that mechanizing the modem function didn't take up much of your time or energy. If so, you are exceptional. For most mere mortals, mechanizing the modem function in wetware is a very time consuming and tedious task. Considering that in less than an hour you could have used your understanding of radio and signaling principles to implement a FSK system offering at least 6 db better performance than OOK Morse, spending an excessive amount of time attempting to emulate the modem function in wetware is a poor use of your time and effort.

We take for granted that some tasks are best left to hardware. We use hardware to generate and receive RF because our biological functions are very inefficient at accomplishing that task. We take for granted that we will use hardware to impress voice modulation on RF because attempting to do it biologically would be extremely painful. Yet for some reason many seem to think that encoding alphabet into transmission symbols should be left to biological modem emulation instead of using superior hardware techniques.

That's most curious. Perhaps it is the result of a system which causes us to neglect understanding of communications systems so that we can use the time to condition wetware into a poor emulation of what is better done with hardware.

[snip]

The FCC has gone through formal regulatory procedures as a result
of many individual filings for rulemaking. I don't know how many
of these were successful in getting the changes requested, as
compared with the success of the ARRL in getting the changes
it advocates.

It seems true, however, that when someone in the FCC thinks
that some action should be taken on a matter concerning amateurs,
the ARRL is often consulted as to the appppropriate action needed.
In turn the ARRL often empanels ad hoc groups to consider special
problems.

Currently I think the most valuable activity of the ARRL is
the effort to get some viable means of enforcement of the law
and rules as they stand today.

Well, the <LF><CR>s disappeared, and the paragraph double <LF><CR>s turned into semicolons. ...makes the whole thing almost impossible to read. Sorry about it. Murphy's Laws, many of them, seemed to apply this time. In any event, the text is there, and the thoughts are there. The point is, one can spend endless hours insulting each other etc. on a newsgroup, or one can develop a personal stand and get it in the mail without waiting for others to reach a committee decision and have one person write it up. Agreements, among more than a handful of hams, on Restructuring or on the code testing are not going to come from a debate group anyway -- leastways not from one that cannot keep itself under some kind of control in terms of common decency and use of fact-supportable statements.

Regards --- Fred Adsit --- FISTS # 1293

Science may have found a cure for most evils;
but it has found no remedy for the worst of them
all --- the apathy of human beings. ---- Helen Keller

Although I am personally vehemently opposed to the morse code testing
requirement for a voice or digital HF license, I fully support FISTS right to
succeed and voice their opinions. The people I have personally come in contact
with from FISTS are mostly very nice, although strong willed.....as am I.
One thing is for sure....FISTS is VERY well organized and they can muster
large numbers quickly, more than I can say for the no-code requirement group.
And, to me, that's the unfortunate thing.
At the debate (Town Hall Open Meeting) in Dayton, http://www.tapr.org/newsline
we debated the requirement with Fred Maia, W5YI and Nancy Kott from FISTS.
Give it a listen at the TAPR site on RealAudio....and hear for yourself what
they had to say...Also, listen carefully to the ONLY people that went over the
time limits and the ONLY people to speak out of turn....

Amen, Marty. The Dx craze is Ugly Americanism at its worst. Though
to be fair, you could say Ugly <insert other dispised nationality here>
about most Dxers, whether US based or not. Let some unsuspecting
amateur from a "rare" country come on the air and it is like feeding time
at the piranha tank. I know a number who gave up trying to operate HF
because of that, or who switched to a digital mode which made the feeding
frenzies less of a problem. This definitely isn't what the charter had in
mind when it mentioned fostering international goodwill.

I have had many people pose many questions to me
in such a way that only one answer, usually wrong,
could be returned.

You included damage to the car which might or far more likely might
NOT have happend, and you indicate that the driver must of
neccessity be blind without his/her glasses.

Actually, those 2 conditions are fairly rare.
If the gas smell is there, the hurt guy must get his/her butt away
from the car; no fear they will try to strike sparks.

If they are that blind without their glasses, how did they lose them?
Left them home? How did they get here? Magic?

Are we even trying to discuss emergencies?

Hell, no.

BTW, it would take me 20-30 mins to make just such a transmitter.

I wouldn't consider that a source of irritation. The eme fellow may not
be interested in chatting like you or I are, but rather in exercising his
antenna building or operating skills. Once proven (by the eme WAS)
he moves on to other things.

Does it irritate you that traffic handlers hardly ever "talk to real
folks"? --or that PBBS operators hardly ever "talk to real folks"? --or
that field-day operators don't take time to chat with "real folks"?

Hey, they're all "real folks" just doing something different than what
you are interested in right now.

Grandma told me "it takes all kinds".....

Stay strong and be good to you.

Ah, so you've worked that dodge too. :-)

AFAIK there are no hotels within walking distance of the Hara Arena,
unless your idea of walking distance is several miles. Most of the
close hotels and motels, IE in Dayton proper, are probably already
booked solid for next year. I usually stay in Richmond Indiana at the
Knight's Inn. They often will have a room available for booking up to
a week before the show. It's about a 40 mile drive from Hara, but it
is a quick one down I-70 and Rt 49 which avoids most of the Hamvention
traffic. And there's a great Rudy's Farm resturant next door to the
motel that opens early to serve the hamfest crowd breakfest.
Recomended.

I stayed at the Best Western on North Dixie this year. That's about
the closest motel to Hara (about 4 miles), but it is in a somewhat
seedy part of town, is a bit rundown, and has outrageous pricing.
They did have a room come available due to a cancellation two days
before the show, however, and it saved me the drive in from Richmond.
That meant I could sleep a little later than usual, and that outweighed
the disadvantages. Avoid the Denny's next door. The food sucks, and
the service is worse.

Note that the Hamvention does its best to discourage you from trying
to find parking near Hara. They want you to park at Salem Mall and
ride the shuttle buses. I did that Friday, and it was a pain. There weren't
enough buses, and they didn't run often enough. Plus it's not very practical
to haul your boat anchor treasure on the bus. Most of the old parking areas
at Hara have been turned into a golf course, but there are a couple of fields
on Wolf Road where you could park for $5 a day. Neither was full Saturday
or Sunday. That's a modest walk from Hara (about half a mile) and I recomend
it if there's no rain in the forcast.

If it rains, those fields become mudpits, park at Salem Mall and wait for
the stupid buses. Or better yet, get your own fleamarket space. That's

the best solution if you go with a group. You can take turns manning the space while the rest of you browse. This gives you a convienent place to drop off your newly acquired junk, and more important it gives you a place to *sit down*. By Sunday you'll be envying those folks in the motorized wheelchairs because your legs and feet will ache so much from all the walking and standing you'll have done.

You need to start building up to Dayton a couple of months in advance so you'll be in shape to walk for three days carrying the big heavy olive drab boxes you just can't live without buying. There was this Watkins Johnson surveilance receiver that I just *had* to own, but better sense prevailed when I realized how far I'd have to carry it. If I'd had a fleamarket space this year, that receiver would have been mine. As it was, I settled for goodies I could stuff in the backpack.

I still found some great stuff, and met some of you there too. It was a well worthwhile trip, and I'm already planning for next year. I'm going to try for a fleamarket space, and I'm definitely going to bring a set of hand trucks.

:I don't know about you folks, but WE had a great time.
:
:The wx was great. The only R*** was late Sunday, and well-forecast;
:we were on the road by then. Friday AM was chilly but who cares?
:Saturday and Sunday were both SPF-30 days.

Compared to past years, the weather was quite nice. I remember past years when it rained all weekend long, and even one year had snow flurries forecast!

:The bargains were there. I bought a gaggle of SCSI cables and
:adapters I needed, found power supplies and time delays, and you
:name it. Others bought fax machines, 100baseT switches, and
:antennas. Even got an ATT NT1 for $2.00!

The best deal I saw there was Microsoft Office Professional '97 for $108. Other venders were selling it for $140 to $160, which is still way below what you'd pay at full retail price.

:As usual, The Committee had everything organized. You might not
:like ALL the procedures they set, but you have to admit for a
:99.999% volunteer-run effort, it's second to none. I watched with
:quiet smile, as some $35K Goshmobile was efficiently towed out. The
:owner clearly thought [s]he could just park in anyone's flea market
:spot with impunity. Surprise. The only surprise was they moved the
:Sat/Sun flea market opening back to 0700 from 0600. We got there at
:0515, opened the booth and thought we were in "On the Beach" or
:such.
:
:So what did other r.r.a.m attendee think? What are your bravos &
:brickbats?

Did you see that weirdo walking around with a six-foot walking staff?

Morse is one of several modes I enjoy using, therefore
I would classify myself as "pro-code".

I do not "oppose" no-code.

Therefore not all "pro-coders" oppose no-code.

Ergo, the sweeping generality is false.

If you folks MUST argue about Morse, could you all agree that
the arguments would be much more persuasive if founded on
defensible logic. Maybe those of us trying to understand both
sides of the issue would then have a basis on which to build
a reasoned opinion.

David,
Why not use a 3-4 element beam in the attic if you need directivity?
I did that for a while several years ago and it worked just fine. I
have also used a hustler 2m stick shoved in the corner. You can get
creative when you have to!

4079. Re: What do we do with CW after 1999?

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-28 00:00:00 UTC
From: bb840@scn.org
Message-ID: <EAwMG5.Lvx@scn.org>
Source record: 197334

As long as phone operation is limited to specific portions of the HF bands, I don't think there should be a problem. Also, I don't believe a CW endorsement is necessary or desirable. Voluntary band plans can be used as they are now to identify CW, RTTY, and other segments of the bands. The people who want to use CW will learn the code and use it, those who don't want to won't. There's no need to create a difficult solution to a simple problem.

>: entirely -- some Texas stations now have a W prefix.

Not "now" but some of them are old. Of course we've probably all heard WOAI blasting away on 1200. That was my first "DX" station. I heard it on one of those old AM/CB/Morse code units from Sears. Then came KAAY, which I also heard on a crystal set from Kansas City.

Then there's WRR in Dallas, which may be the oldest "broadcast" station. It used to be the fire dispatch, but played records between calls.

4083. FISTS Declaration (reformatted, I hope)

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-28 00:00:00 UTC
From: ny2v_fred@juno.COM
Message-ID: <19970528.062935.7911.8.ny2v_fred@juno.com>
Source record: 197365

Hopefully, for those interested, this will appear more readable
than the last submission. Windows ASCII word processors
leave much to be desired.... This 1995 formal document will
shortly appear on the FISTS Web Site.
==========
The FISTS CW Club (the International Morse Preservation Society)
early in 1995 conducted a formal ballot of its North American
membership. The result was a 95% approval of the following
declaration, the first such document from a grass- roots ham
organization calling for a restoration of examination standards.
Since this was done, FISTS has grown at a record pace, here in
1997 with roughly ten times the membership it had at that time..
Newer members of FISTS may never have seen this declaration,
since the management and reps have not routinely included it
with their application and sample materials:

FISTS DECLARATION OF PURPOSE AND POLICY

WHEREAS, FISTS, the International Morse Preservation Society,
noting with concern the general trend to ease Morse Code and
theory exam requirements for Amateur Radio licensing during
the past two decades;

And WHEREAS, noting that easing of requirements indicates
abandonment of the traditional mission of amateur radio as a
technical hobby pursuant to the spirit and guidelines
originally set forth in Part 97.1 of the Communications
Act of 1934;

And WHEREAS, noting that an apparent correlation exists
between said easing of requirements, and loss of frequency
allocation amounting to more than 100 MHz (see Amateur Radio
Spectrum Protection Act),

And WHEREAS, FISTS, the International Morse Preservation
Society, with a U.S. membership of 350 (and an international
membership of 1600):

* Finds the present multiple-choice option for demonstrating
Morse Code proficiency to be at direct odds with preserving the
Morse Code requirement for the Amateur Radio Service,

* Considers the multiple-choice option inconsistent with the
American Radio Relay League's unconditional support of the
International Morse Code, as stated in minute 41 of the Board of
Directors Meeting of January 1993 (QST, March 1993, p. 78),

* Opposes continued easing of Morse Code requirements for the reasons that such easing of requirements is at direct odds with the unique nature, purpose, and scope of the Amateur Radio Service, and directly affects retention of frequency spectrum allocated to the Amateur Radio Service as summarized in petitions RM-8259 and RM-8260 previously filed before the Federal Communications Commission.

THEREFORE, FISTS, the International Morse Preservation Society:

* Encourages its membership who now serve as Volunteer Examiners to conduct, whenever possible, traditional Morse Code examinations in which one minute solid copy of plain-text is required for demonstrating Morse Code proficiency at a given speed,

* Encourages all who are or might be in a position to affect the issue, now or in the future, to maintain Morse Code proficiency as an international standard for licensing in the Amateur Radio Service,

* Urges the American Radio Relay League to support and pursue the restoring of the traditional one-minute solid copy standard as the fundamental standard for Morse Code testing for all classes of license in which there is a Morse Code requirement,

* Requests the Federal Communications Commission to eliminate themultiple-choice option and to restore the traditional one-minute solid copy standard as the fundamental standard for Morse Code testing.

This declaration was written by WB2EZG with assistance from NY2V, AA8HV, WA8KSS & W8ZNH.

> applicance operators you cannot expect people to use bands until
> commercial gear is available for them.

The other side of that coin is what I'm pushing ... that, with reasonable
technical rules and licensing requirements, we'll have more pioneers.
That's what we need, not more appliance operators ...

> >Notice that I stated what's wrong ... eg: "We have something (our

What makes you think I'm not doing exactly that ... pretty soon the
no-coders will completely outnumber the coded and then you won't even
have your illusion that "the majority wants code testing."

> up there on those bands, pioneering the next generation of
> amateur radio, rather than wasting your time trying to get them

> on SSB all day.

There is nothing wrong with them using SSB ... but I don't expect that
that will, by any stretch of the imagination be all they'll do ... HF presents
too many fascinating possibilities for all sorts of new stuff that folks like
you can't even begin to imagine, let alone design and build ...

> >What I have a problem with, Mike, is the fact that you brag about

> about. I, on the other hand, see a dramatically different version of
> aamteur radio -- one where dedicated, hard-working people give up hours
> of their time to perform selfless acts such as passing MARS traffic
> for our men overseas.

MARS was wonderful in the heyday of Morse ... and even more recently ...
and it will continue to provide useful and appreciated services ... I never
said
anything to the contrary ... however, duing Desert Storm, they had phone
booths out in the desert and they just direct dialed home ... no problem ...
the need in some areas is diminshing and we have to make up the slack
in other ways ... it's called "change" ... you can't keep things "the way
they were" forever ... no matter how you try ...

> If you think that is "slithering" (more personal attacks, Carl?) then
> so be it. However, it is going to be the emergency and public services
> aspects of amateur radio today which is going to save our bands. A
> bunch of technical geeks with slide-rules

Now THAT's FUNNY ... (really) ROTFLMAO ... I haven't used a
slide rule since about 1972 ... when HP came out with the first
scientific calculator ... I don't even know anyone who OWNS one
any more ... not even stuffed away in a drawer somewhere or packed
away up in the attic ... that paradigm is DEAD and the slide rules
were not even worth keeping as "souveniers" to most ... so is Morse
but there are a lot of nostalgia geeks and souvenier collectors in our
ranks ...

> running around saying how
> if they orient this piece of silicon with that little electrolytic
> thingy over there they can improve power output 10% isn't going to
> cut it. The powers-that-be and mass public can't support that vision,
> because its something out of a Revenge of The Nerds Part IIX movie.

Wake up Mike ... being a "geek" is cool these days ... hell, geeks are
the ones who are making money ...and only working one job (where they
don't break their backs and get all dirty) ... and driving nice wheels ...
and getting laid ... hell even Bill Gates can get laid these days ... it's
exactly those "geeks" who can tell folks how to "orient that piece of
silicon" who are in demand ...

> People can support "normal" people -- doctors, security guards, homemakers,
> retail clerks, the list is endless -- "just like them" who are involved in
> providing a useful, necessary service to the community.

Advancing our telecommunications technology IS "providing a useful, necessary
service to the community" ...

> Rather than knowing
> how to wind a coil, instead, amateurs today need practical skills on how to
set
> up an emergency communications station, coordinate an emergency
> communications net, and most importantly, know how and when to shut
> the hell up and LISTEN.

I agree that today's hams need all those skills Mike, but there's a lot more to
"setting up an emergency communications station, etc" than stringing a dipole
in a tree and hooking up some rice box ... emergency communications agencies
need and are demanding more and more data ... I believe it was CAL-OES that

went on record as stating that their first, most important need was for DATA communications ... the point is that hams are becoming increasingly incapable of providing what the EMS folks want and need and that will cause them to look for other means of filling those needs ... and result in us losing the support that
they have historically provided us in justifying and protecting our bands ... if they
tell some FCC or Congressional committee "Hams, hell no, those backward twits are more in the way than useful ... we use RAM Mobile Data, cellular, and our portable SATCOM terminals (and they DO) nowadays ..." we're screwed ...

> >I don't give a rat's ass about your "incident at Dayton a few years back"
>
> Of course you don't, Carl. It was the start of the "slow code" movement,
> and proves how the interest in a codeless HF license is being driven,
> partially, by the equipment manufacturers.

Mike, it doesn't prove any such thing ... those of us who are pushing for the end of code testing have not "been driven by the equipment manufacturers" Hell, I can tell you that I haven't talked to any of them in years ...

I don't think so ... we lost part of 220 partly because of lack of
use and partly because the ARRL pissed off the FCC by opposing
the no-code tech class ...

> >it is expected that we'll tinker and experiment and create something
> >useful there ... if we don't there will be no market opportunity for the

> bands.

I'll conceed that appliance ops can serve to up the body count to
make it look as if we're using those bands ... but the fact is that
today's appliance ops and their appliances make dismally poor
use of those bands (even 2m, even in the major urban centers)
by any reasonable technical standard ...

> >Notice that I stated what's wrong ... eg: "We have something (our

I'm not trying to be the judge here ... I'm just giving you a
reading on what I believe the regulators expect of us, as one who
has dealt with more than one of those in high places at the FCC
on a first name basis ... and as someone who knows in real-world
technical terms what we *should* be capable of and how far behind

the commercial competitors we are as a group ...

I have a Yeasu FT-911 1.2gig ht for sale. I took this unit in as part trade on some computer work I had done. The amateur operator that owned it, hadn't used it in about 2yrs. Needless to say, the radio is in almost brand new condition.

There isn't any 1.2 gig activity here in Las Vegas, so I'd like to sell it and put towards another rig, possibly an allmode 6meter.

I has all the docs, charger, battery, ant. If you know this radio, it's a pretty nice one. Keypad, encode/decode built in. All that good stuff.

I'm asking $350 obo and I'll pay shipping.

My friend has a DJ-580T dual band ht. For some reason the UHF side has lost it's transmit. It will receive.
The VHF side works on both TX and RX. If someone wants to try their hand at finding out what the problem is with this, they can have it for a song.

He's asking $150 obo for it. It's no good to him the way it is. He wants to put the money towards another dual band.

Let's see if we can help him. Thanks.

This file is 31K long. Note when it was submitted. Note the exact proposal text
quoted in the response. Hopefully this prints ok on the NG. It did at indiv.users'
computers.... NY2V - 1997-05-28

To: Ms.Kay C. Craigie, WT3P, ARRL Atlantic Division Directorcc: Members of the ARRL WRC-99 Planning Committeecc: Other influential Radio Amateurs interested in the Restructuring Proposal Date: February 19, 1997Subj: Fred Adsit NY2V's Comments on Article By David Sumner, K1ZZ published in "QST", March 1997:>Member Comments Sought on Licensing StructureNY2V Comments:I prefer to comment on a statement-by-statement or paragraph-by-paragraph basis, thus maintaining organization and ease of understanding. A survey would have been preferable to just seeking member comment. Better yet if the whole process had never been started. The use of the ">" as used in packet and some e-mail is employed herein to separate ARRL statements from my commentary.I have not quoted proposal sections with which I agree or which appear redundant.>While most of the discussion surrounding the work of the ARRL WRC-99>Planning Committee and its membership survey (QST, Feb 1997, p 54)>swirled around the issue of the international requirement for Morse code>testing for operation below 30 MHz....., the committee also discussed concepts >for the simplification of the amateur licensing structure in the United States and >for additional HF digital privileges for Novice and Technician Plus licensees.NY2V Comments:The trigger here is "additional HF digital privileges...etc...". Although the Committee later proposes a somewhat more difficult examination to attain a merged Novice and Technician Plus license with the proposed name of Intermediate Class, I see no reason to grant any additional privileges. The bottom line, right here at the top, is that the ARRL is disturbed by the split which has developed in the ranks, and the decreases in licensees, license upgradings, ARRL membership, and equipment manufacturer complaints of poor sales, especially of HF equipment. It is all a matter of money. Why and how we got into this jam, and how to reverse these trends, will be addressed. Nothing will be gained by making it even simpler to obtain HF operating mode or spectrum space privileges. We have seen the benefits reaped by creating the Technician and Technician Plus licenses - they are minor benefits at best, unless one considers a license to communicate on VHF, and nothing more, a benefit. The entire system of licensing and nature of exams has made it simple to attain licenses and privileges, with little sacrifice needed to do so. We are reaping the consequences. >From the Committee Report>The Committee reviewed the evolution of the licensing structure for the >Amateur Radio Service in the United States and concluded that the Novice>Class license, while extremely beneficial at an

earlier time, is no longer>useful.NY2V Comment:You should have left the whole proposal at this: Merge active Novices into the Technician Plus class.>The Committee identified a growing concern about the development of two>separate amateur communities, one active on the HF bands and the other>active on VHF and higher frequencies. Although some amateurs are>participants in both communities, for a number of reasons, fewer recently>licensed amateurs are seeking to participate in both. The Technician Plus>license is not presently succeeding in introducing newer amateurs to the HF>community. NY2V Comment:What we have now is the desire for instant gratification, the perceived difficulty of Morse Code, the effect of Internet communications, and the simplicity of getting a Technician license, the latter having been heavily promoted by the ARRL. The Technician Plus license from an HF point of view is no different from the Novice license. Both involve slogging along in Morse Code at 5wpm, since 1951 in the case of Novices. One can find little of interest in such a modus operandi. Although huge numbers of hams progressed at least to General Class, the bottom line is that one must copy and send Morse Code at speeds exceeding 20wpm before one can feel that a conversation is taking place with no need to transcribe anything but notes on paper. The Novice license per se has been a failure, as the Committee now admits, and the Technician Plus license - in HF operation - is no different and is thus a failure. So much for on-the-air slow-code practice. The advent of ready-access Internet e-mail has aggravated this situation. In an era where less effort is perceived to be ideal by society in general, the ARRL should have been emphasizing the fact that the Internet, and for that matter, no-code VHF/UHF communications, are not Radio technology pursuits. Clearly the Internet is not, and the failure of Technicians to upgrade reveals the mindset of these licensees. As a rule, they simply wish to communicate. This is only part of Amateur Radio as it is defined by the FCC's Part 97 Regulations. Thus far, the FCC has not seen fit to redefine Amateur Radio for what it mainly now is - a personal communications service.>The additional operating privileges gained by upgrading from Technician to >Technician Plus tend to isolate Technician Plus licensees from other HF license >holders and do not provide an adequate sample of HF operating experiences, >particularly when the sunspot numbers are low. As a result, newly licensed >Technicians are not upgrading at the rate that might be desired, and may >abandon Amateur Radio before they have adequately explored the opportunities >available to them.NY2V Comments:The advent of Internet e-mail for the masses, and the Web Effect, and a coincident null in the sunspot cycle, have made HF seem much less attractive. This is pure coincidence. The Sun is about to rectify its part of it.As for exploring opportunities, the Committee is leading us right into the try-before- you-buy (so to speak) concept of allowing "Technician Plus Plus" (Intermediate) Class licensees to use huge portions of 80, 40 and 15M, and even parts of 160 and 10M. Currently, one must upgrade to General Class to earn a taste of this. Now the plan is to dumb down amateur radio and let a ham who has learned less than a General Class licensee and who has not passed a General Class code exam go right ahead and use substantial portions of three of our best bands. This is totally unconscionable. The dumbing down of amateur radio

has, finally, attained a formal definition in the form of this Restructuring Proposal. >The Committee noted that there is a well-documented learning plateau in the>vicinity of 10 words per minute. The large step from 5 to 13 words per minute >thus represents a significant barrier to upgrading. NY2V Comment:Hundreds of thousands of hams have advanced to well beyond 13wpm and have experienced no barriers to passing the code exams. The plateaus are Not "learning plateaus". The only plateau is the one a person reaches when it becomes difficult to transcribe to paper what is being received. This occurs somewhere in the vicinity of 27 wpm for the typical human being, although we know that with practice, many have far exceeded this limit. Some experts say that 27wpm is a good conversational speed. Since that is well above the highest-speed code test we administer, we can stop talking about the myth of learning plateaus. We can coincidentally discard the idea that advancing from 5wpm to 13wpm is so difficult compared with 5wpm to 10wpm that the barrier to upgrading to General Class is overwhelming. This is unscientific and illogical bunk. Hams have been proving it since 1936 when the jump was from Zero wpm to 13wpm. They did it. I did it. We all did it. Case closed, not that I am done commenting on it.>At the same time, comments addressed to the Committee documented a >significant concern in the amateur community with the existing Morse code >testing process.NY2V Comment:Abuses do exist. They range from copying nothing on paper and correctly guessing 7 of 10 multiple choice answers all the way to obtaining unwarranted medical waivers. More on this later.>The Committee observed that the Morse code requirements for different classes >of amateur license ought to follow a logical progression. The Intermediate Class >Morse examination is proposed to be Element 1(A), 5 words per minute. The >General Class Morse examination is proposed to be a modified Element 1(B), 10 >words per minute. NY2V Comment:There already Is a logical progression, except for no Advanced Class code test. As for 10wpm, I covered that. I have long insisted there is an agenda here. The ARRL's member survey contained the long-anticipated entrapment question, with that answer "10-13wpm". This alone rendered the survey unprofessional and unscientific.. Now, after numerous public statements made by the highest officers of the ARRL supporting the concept that the Morse Code is outdated, we find ourselves staring at this restructuring proposal with its illogical and unjustifiable proposed General Class code test reduction from 13 to 10wpm. Even New Zealand's ORACLE group has declared this, in view of US theory exams already having been dumbed down, an unacceptable move. In the longer term, history may repeat itself. At one time it was proposed that a 16wpm Advanced Class code test be given. It did not happen. However, This time, the gap between 10 and 20wpm may be eventually deemed too large. Having lowered the General standards to 10wpm, a logical step could be lowering the Extra to 15wpm. This would evolve into tacit approval of lowering code speeds, and, in subsequent filings, one would see the code speed dropping to zero for all license classes. There simply is *no* provable, demonstrable benefit in lowering the speed from 13 to 10wpm. There is absolutely *no* justification, be it scientific, technical, or from polls of membership sentiment at the Division level, to even consider such a proposal. Given

that the question asked in the recent survey was deliberately rigged, per the beginning of this lengthy comment, consideration of a 10wpm test has no justification whatever. Keep it at 13wpm and cease riling up the ham population. Also, In the future, it would behoove the officers of the ARRL to exercise great care in speaking as representatives of the ARRL (us members), not as advocates of their personal views. It just might defuse the ongoing heated debate and attract newcomers willing to make a small sacrifice to join up - as a ham - and as a member of the ARRL. The bottom line is the dollar sign. If that is, and it *is*, the ARRL's problem, then level with the membership as was finally done in March 1997 "QST". Do not come up with unwanted proposals, particularly ones of this type, which lead to even greater divisiveness than the ARRL is concerned about. Ham radio is going through difficult times due to poor judgment on matters such as not continuing to promote the technical aspects of the service. More on this in my closing comments.... >The Advanced and Extra Class would remain as at present [ie, no additional >Morse examination to go from General to Advanced, and an examination at 20 >words per minute to go to Extra].NY2V Comment:Here I wish to propose merging the General into the Advanced Class, since there is no code test associated with the Advanced Class license, and no resultant code spectrum privileges. Grandfather Generals to Advanced, thus in part resolving the longstanding complaints about what happened in the Incentive Licensing era. The 20wpm Extra test speed should remain the same, and provides a logical almost perfectly-spaced upgrade progression of 0, 5, 13, 20. This takes us from six to four license classes. I believe this to be a change worthy of very serious consideration.. >Examinations for all three elements should be revised to include a sending test >and a return to the requirement for one minute of solid copy during a five-minute >receiving test period. NY2V Comment:It seems the FISTS CW Club and VE complaints got a hearing. We thank you all for that. Once this is implemented, guesswork will be eliminated. We will rest assured that the applicant could, at least when taking the exam, send and receive at the requisite speed. By making sure of this at exam time, we might find ourselves with as many Morse Code enthusiasts as we used to have before the code test was dumbed down. [VEs may get into debates about sending quality. FCC examiners simply pushed a 3X5 card of text in front of you and as soon as it became evident you could send at the requisite speed and be understood, that part of the test abruptly ended. One should be allowed to use a keying device of one's choice, i.e. the one likely to be used in one's station - be it handkey, semi- automatic key, electronic keyer with paddles, or a Morse keyboard. The VEs should provide only a handkey and permit the person being tested to adjust it to suit. Examinees should furnish any of the other devices, preadjusted to suit them.] >The Committee also noted great concern in the amateur community about >perceived abuses of the handicapped waiver provision, and urges that steps be >taken to reduce the opportunity for such abuses. NY2V Comment: I agree. I have two great stories to tell here. The first was a fine gentleman named Lawrence Burley, who (this is not fiction) took the 13wpm code test dozens of times before he passed it, and only then because the exasperated FCC official permitted Burley to state out loud what he could not legibly

scribble on paper. He had passable, albeit choppy, sending technique. And he passed, at last. Mr.Burley lived in Osceola, PA, had a radio repair shop plus a station he could not use, and was a legend in his own time. True story number two: Advanced Class WA2INV is a quadraplegic who spends most of his life lying face-down. He passed by using his voice to demonstrate receiving And transmitting ability. Not being a doctor, I have a very difficult time dreaming up reasons for code test waivers other than having diseases such as palsy which cause uncontrollable shaking. >As will be discussed below, phasing out the existing Novice bands on 80, 40, and >15 meters is essential to achieving other objectives; therefore, it is not practical >to maintain the Novice as a sixth class of license with its existing set of >privileges, but for which no new applications would be accepted.NY2V Comments:The chief "other objectives" are 80, 40 and 15M digital privileges. Let us drop this a moment and go back to this concept of dumbing down the test requirement to permit exploring HF using an Intermediate Class license. Logic does not prevail here at all. To do this, said licensee would have to invest in HF equipment. This equipment would be little different - if at all - from that needed to pursue General Class operating privileges. My previous "try-before-you-buy" statement, you see, should be called "buy before you try", and the class of HF license matters not one whit. I urge you to think on this. A lot... Moving along, one committee member referred to HF digital as a "niche" mode. Well, frankly, that is true. So what's with this business of giving digital privileges to hams with less than a General Class license? They can already use digital (packet) on VHF and up. Most do. They will really be miffed to find out how slow HF digital modes are, what with the bandwidth limitations...>The features of the Intermediate Class received extensive consideration. With >the elimination of the Novice license, the frequencies that are presently assigned >for Novice and Technician Plus CW operation would become available for other >uses. NY2V Comment:Since I propose only Morse Code privileges should be afforded an Intermediate Class licensee, and since the impact on the CW and Data portions of the three affected bands would be horrendous were Intermediates allowed to operate especially on the 80 and 40M frequencies proposed in the next section, I submit that the Novice bands should be retained as-is. Rename them Intermediate bands if you will, but do not eliminate them, and do not, on the 80, 40, and 15M bands involved, give added frequencies to Intermediates. My Director said that many slow-speed code nets do not operate in the Novice bands, and thus the Intermediates would have no access to them. Well, instead of "refarming" the entire subbands with this dumbed-down HF entry proposal, simply negotiate with the slow-code nets and convince them to move into the Novice (Intermediate) subband where they logically belong. If the ARRL Field Services Director were on the Committee, I would hope he would point out the wreckage of the NTS that would result by pushing phone frequencies farther down into the 80 and 40M bands. >This will make it possible to achieve some modest expansion of the HF phone >bands of all HF licensees. NY2V Comments:With my concept, Generals will have as much phone space as Advanced. Extras would retain their extra 25KHz of both phone and code. Elaborating on the impact of moving phone subbands

downward: 50KHz is a significant subband, and squeezes the CW and digital allocations another 25KHz. Ever since I became a ham in 1948, the Canadians have moved their phone bands down as we moved ours down, pushing their phone operation into our CW bands. It is a bit miraculous that the Canadians have - now in the absence of Any governmental control of mode vs. frequency - maintained a gentleman's agreement and not moved much farther into our CW bands (although they Are using parts of our downward shifted Novice bands). With all but Tech licensees freely roaming the CW bands, and with Extras getting 25KHz more for phone, the Canadian track record I have brought up will undoubtedly result in a new backlash resulting in pure bedlam..>The Committee followed the principle that while the Intermediate Class should >include meaningful phone and digital privileges in various parts of the HF >spectrum, the most narrow and crowded bands should not be available. The >Committee reached consensus on the following proposed set of HF operating >privileges:> Frequencies (in kHz) and modes:> CW Digital
Phone & CW>160 meters:> -- --
1950-2000>80 meters:>3525-3700 3600-3625
3900-4000>40 meters:>7025-7050 --
-->15 meters:>21025-21150
21100-21125 21350-21450>10 meters:>28050-28300
28100-28189 (SSB) 28300-28500 (FM)
29500-29700>Transmitter power: 200 watts PEP output maximum (other licensees using these >bands would not be limited to 200 watts).NY2V Comment:With my counterproposal, the 160M and 10M allocations might be acceptable, but the others would not, since I support Novice subband retention. Re the power limit, it should be 100 watts. 200-watt commercial transceivers are ultra-expensive and are unlikely HF-entry-level appliance choices.>The following adjustments to the phone bands of other HF licensees are >proposed, made possible by the elimination of the Novice bands:> General Class: Add 3800-3850, 7200-7225, 21250-21300 kHz> Advanced Class: Add 3725-3775, 7125-7150, 21175-21225 kHz> Extra Class: Add 3700-3750, 7125-7150, 21150-21200 kHz>Thus, each of these license classes would pick up 50 kHz of additional phone >band on 75 and 15 meters, and 25 kHz on 40 meters.NY2V Comments:My previous objections apply to these detailed subband expansion proposals.With Intermediates not being allowed to use phone on HF, and with Generals having double the space on some bands (as they did have for a time), most everyone except perhaps Extras should be very happy. The Extras mainly take advantage of their existing 25KHz bottom-of-band CW privileges anyway. Taking 75 phone as an example, the Canadians occupy the supposed US Extra phone segment. On 40M, SW broadcasters occupy everything above 7.1MHz. (in the cases of 40 and 10M, we may soon see a downward shift in one and an add-on to the other anyway - so why tamper now? Just wait.>Some Questions and Answers>..... The answers represent the thinking of the author and not necessarily the >rest of the committee or the Board.NY2V Comment:Mr. Sumner's example Q & A's provide a vehicle for some appropriate comments.>Q: Doesn't the proposed reduction in General and Advanced code speed from 13 >to 10 words per minute amount to a lowering of standards?>A: One problem with the

existing code tests is that the standards are not >consistent. Whether an applicant passes or fails may have more to do with the >design of the test, ie, whether it's true/false, multiple choice, or fill-in-the-blanks, >than with their Morse code ability.NY2V Comment:Dumbing down from 13wpm to 10wpm had to do with Morse code ability, didn't it?In any event, it certainly does amount to a slight lowering of standards, and is based on myths about "plateaus", as I discussed previously. If the applicant correctly copies the text, the above answer is ridiculous...>Q: How did the committee come up with the list of privileges for the Intermediate >license?>A: It was thought best to leave the HF bands with the greatest scarcity value -- >that is, the narrowest and most crowded bands -- off the list. That principle >applies to 20 meters and the narrow bands won at WARC-79: 30, 17, and 12 >meters. It would also apply to 40 meters, but Novice and Technician Plus >licensees have CW privileges in this band and the committee did not want to >eliminate an existing privilege. (Access to 25 kHz below 7100 kHz was thought to >be reasonably equivalent to the existing privilege of 50 kHz amongst the >high-powered international broadcasters above 7100 kHz.) Some might argue >that the principle also applies to 80 meters, but this band is wider, there is some >elbow room during the daylight hours, and it offers an opportunity to get involved >in public-service communication.NY2V Comment:Most of this I covered. On the last item, find me a phone traffic net that is in trouble finding space on 80M (they DO have trouble on 40). Net frequency choices will be simpler under my proposed General/Advanced merger. The evening 80M CW nets do not, except for the slow-speed ones, accommodate hams crawling along much below about 18wpm. Those who acquire speed from the slow nets move up when they feel comfortable. It has been working well for years. NTS and ARES/RACES public service opportunities dominate on VHF, where many hams are fortunately deeply involved. On HF, slow-speed traffic nets are working fine. >Q: This is a start, but you didn't go far enough; five classes of license are still too >many.>A: As reported in the survey results last month, the vast majority of members >think there should be at least three classes of license. There was no consensus >that the "right" number was either three, four, five, or six. The committee did not >interpret the survey results as a mandate for radical change.NY2V Comment:What? This officially proposed dumbing down of ham radio is radical in the extreme. The mandate for this travesty is a decrease in the attractiveness of Amateur Radio as a technical hobby and service, and an even more devastating decrease in the number of hams deciding to join the ARRL. NY2V Closing Comments:1 - The ARRL committee is persistent in the 10wpm issue. The issue has no merit.We will not settle for promises to further discuss it. That will lead to convenient oversights in the future, with nothing offered and nothing delivered. We deserve a full disclosure of why this has been, for a long time, a matter the ARRL feels compelled to force into FCC law. If it goes through, the ARRL should be prepared for much criticism to follow, along with having to suffer the consequences of its actions.2 - Merging Novice Class with Technician Plus class has merit all on its own. Eliminating the Novice bands has no merit whatever. It works hand in hand with dumbing down the entry-to-HF test requirements

and resultant operating privileges. Merging General and Advanced Classes does make sense. The exam could be slightly longer and geared to the Advanced Class level. Frankly, honoring this subject with details of methodology is ludicrous, since the exam answers are rote-memorizable (ie: the written exam system has already been dumbed down and the code remains the only HF entry filter, although it too is currently dumbed down via the multiple-choice answer system which, finally, the ARRL now agrees is a highly imperfect measure of knowledge.).3 - Four license classes - Basic (no code/no HF), Intermediate (5wpm w/ current Novice privileges), Advanced (13wpm) and Expert (20wpm) - with no changes in subbands other than the returning of phone segments to Generals - will work and cause the least disruption.4 - Await NTIA progress and any that can be encouraged by the ARRL in gaining as much as 900KHz of HF space for Amateur use. Allocate the bands or band additions after they are offered to us. There is, of course, one caveat - we must be perceived by the FCC as deserving these HF frequencies...5 - A tall order: Return the ARRL to the standard-bearer of technical excellence in the radio art. Return to teaching the basics - basic technical knowledge of electricity and electronics, elementary radio circuitry, antennas, propagation, and operating techniques in an astounding number of modes and situations. (The ARRL can say that the VE question pool covers all this, but again, the answers are 100% rote-memorizable, thus making it possible to be a ham and not be able to solve an Ohm's Law equation). Promote ham radio for what it used to be: a technical avocation and a public service, of which one can be proud to be a government - licensed member. A high-quality avocation requiring one to engage in some real learning Will attract enthused participants. At this juncture, I would like to quote something Doug DeMaw recently wrote me:"The ARRL continues to use "technical advancement" as justification for lowering the code requirements. Technical advancement will occur only if the League returns to the business of providing tutorial and practical technical articles in QST and the Handbook. Driving down the highway and talking into the palm of one's hand via a repeater does not cause, nor has it caused any amateur to be inspired toward the technical aspects of our pastime. "6 - Foster the use of computers as technical equipment in the ham radio station and as an operational tool. Push this hard - it will attract the young. Also, however, do not knuckle under to the "transceivers are too hard to build" syndrome -- Just as it is instructive to read the detailed manuals provided by our most-respected US manufacturer of ham transceivers, it would be equally so to regularly see such information in QST articles. 7 - Maintain and defend public service, especially in the Year of Public Service. Refute the myths that we are no longer needed. That is and will continue to be an invalid assessment, and the public should know that they will, not, in severe emergencies, be able to depend on cellular networks, any landline networks, and often anything but emergency power. The public should be aware they can depend on us, as always. The communications infrastructure cannot be economically built to handle infrequent extreme loading. Hams always step in when this occurs (many times annually).8 - Whip up enthusiasm for Elmering and showing off our activities. No other hobby or service offers so much. The image we

project - a valid image - will attract those who truly are interested in Radio technology and Radio communications. It remains a modern challenge. We can return to being the conduit for U.S. hams choosing electrical and electronics and radio engineering as a career. We can reestablish ourselves as sources of new equipment designs without looking to the Pacific Rim to find them. I became an EE because I became a teenage ham. I learned and I love Morse Code. Nobody every told me it was easy, but nobody ever touted it as something I could seek to conveniently bypass, such as certain ARRL handouts effectively do. To me and to many old-timers, and to some newcomers, it is a badge of honor and pride to be proficient in Morse Code. Those who chose or choose not to use it are not qualified to criticise it. The dogged determination of CW operators to retain our present testing system and operating privileges is a testament to that of which I speak. We equate Morse Code with Amateur Radio, and most of us who use it will admit it remains almost a religious experience. We do NOT want it dumbed down, and NO ham worth holding a license wants operating privilege access dumbed down. It is a symptom of a sick society to want more for less. We must not knuckle under to this syndrome. We are in this mess because we allowed it to happen. All we need do is set high standards and demand they be met in order to be one of the elite - a US Government-licensed Amateur Radio Operator.Mr. Sumner ends his article with these statements:> The changes discussed in this article are not ARRL policy;NY2V Comment: Not officially... but look who is on the Committee...> ; there is no timetable for completion of this process.NY2V Comment: I think very few will address this proposal in any detail, pro or con. By not making this a survey (a dumbed-down opinion poll), very few will spend the time it takes to respond thoroughly and logically. This may well lead to the ARRL justifying a proposal to the FCC in the near future.Thank all of you for taking the time and effort to read and analyze my comments.As I close this, I am monitoring a Canadian SSB station working DX on 7.045.60 MHz. ..... 4090. What do we do with CW after 1999?

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-28 00:00:00 UTC
From: sco@sco-inc.com
Message-ID: <338bd559.677010@news.mindspring.com>

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

It is not too early to start thinking about what we (Hams) in the USA might want to do with CW and code testing after 1999.

I fully expect cw testing to be removed as a treaty obligation for amateur radio use in the HF bands starting in the year 2000.

Since cw is a mode so linked with the history of ham radio I would like to think of a way to promote its limited use and continuation as a valid mode after 1999.

One way might be to create a CW endorsement for ham licenses? The code exam could be used to see which hams can use cw in which cw sub-bands? That might be a way to help preserve cw after it is no longer required in order for a ham to get a HF license. This should help the cw operators who wish to preserve cw as a mode of operation for the future.

In the past the FCC has not shown that it likes endorsements.
Therefore perhaps we need to think about creating a CW ONLY license that would be good for HF and VHF/UHF/Microwave cw sub-bands?
I have no idea what we would/might call the license. I am sure there are some good names out there and some funny names, etc.

Is there some legal reason anyone knows of why a ham could NOT hold two licenses at the same time? Say a General Class or Extra Class and a CW Class license?

How many no-code Japanese stations have you worked on the HF bands?

Oooops, what's that? Speak up -- I didn't hear you? Did I hear you
mumbling something about Japanese codeless licensees having power and
contact distance restrictions which preclude them from operating "DX"?

So much for you attempt to hook a completely unrelated topic to the
Evil Morse Conspiracy.

Hey Glenn... Just keep in mind that "once a liar, always a liar" rule.
Given that Carl lies about posting to USENET from work, there is no
reason not to suspect he wouldn't do the same about "legally" getting on
HF...

On the contrary ... the professionals at the cutting edge of technology
who refuse to waste the hundreds of hours of practice necessary for most
people to learn code at the 13-20 wpm level are the ones who could and
would likely contribute the most (in technical progress) ... the code selects
FOR the idle, often retired, appliance operator (who has the time to waste)
and AGAINST the technical folks whom we need ...

> shrinking fast instead of *slowly* growing or holding its own.

Interesting that that which you pro-coders all oppose (no-code) is the
ONLY thing that reversed the downward spiral ... to deny that and assert
that more movement in the right direction would somehow make ham radio
"sicker than it is now, and shrinking fast instead of *slowly* growing or
holding its own" is absurd ... ham radio has been growing more rapidly than
before BECAUSE of the no-code tech ... not simply "holding its own" ...
the only thing that's only "holding its own" is the ARRL ... losing money
and getting smaller and smaller percentages of new hams as members
because it's so out of touch with them and reality ...

Not that I *owe* YOU any explainations, but here you are anyway ...

First I worked a lot of 40, 15, and 10m CW as a novice and "old tech"

Second as XE2/WA6VSE (a legal Mexican callsign, while living in Mexico
for a couple of years ... NOT a US call "portable" ... entirely within Mexican
territory and subject ONLY to their rules and jurisdiction) I worked a lot of
SSB on 160, 40, 20, 15, and 15 ... as well as a lot of AMTOR on 80, 40, 20,
and 15 ...

The US is NOT the only country in the world who licenses hams, you know.
Some coutries actually have NO class or mode sub-bands, preferring to allow
the users to determine what frequencies and modes to use ... imagine that ...

Source record: 197383

The International Morse Preservation Society (the FISTS CW Club) has become the fastest-growing ham organization in the USA, if not in the world.

Its goals are to further the use of Morse Code on the bands, to encourage newcomers to the mode, and to engender friendships within the membership. Other than a modest $15 annual fee -- for which you get a lifetime membership number, monthly KeyNote newsletters, invites to participate in events & be a code buddy -- you derive the satisfaction of knowing your are doing your part, along with thousands of other FISTS members, to fight a growing sentiment against Morse Code testing and, for many, the desire to displace Morse Code as an operating mode.

FISTS membership embraces all 50 US states, Canada, Europe, Africa, Asia, and South America. New hams benefit most, with the help of more experienced ones. Either as a new operator, or as one who would like some encouragement in the use of Morse Code, or as a veteran operator, you can be a part of this great organization.

To obtain a membership application and a free sample of KeyNote, the monthly FISTS newsletter, send your name, address and call to Joe Pardue, K5LHR, 29 Melrose Dr., Marrero, LA 70072. You can also reach Joe via e-mail at jpardue@jep.com, or visit the FISTS Web Site at http://n9nvv.qrp.com/~fists

If you wish to join now, simply send the fee (check payable to FISTS) to North American Representative Nancy Kott, WZ8C, POB 47, Hadley, MI 48440. Perhaps you heard Nancy debate the merits of Morse testing and use, either at the 1997 Dayton HamVention, or on SW radio WWCR on April 27, 1997. If so, you have an even better idea of what FISTS is all about! In another message, you will see the FISTS Declaration of Purpose and Policy, overwhelmingly supported in early 1995 when the US membership was a tenth what it now is in early 1997.

Precisely. Still, I don't denigrate the effort. It just irritates me
that this type of person hardly ever talks to "real folks" and seldom
does much to occupy a band, which is what the FCC looks at when
deciding if we're "using" it.

Jacqueline Herman <jherman@sierra.NET> wrote:

Did you change sex Jeff?

>Well Yin, I looked through Part 95 and couldn't find the word "hobby"
>mentioned, but neither could I find the word "ham radio".

First of all, its Part 97. Secondly, we've been over the "ham radio"
and "hobby" point before.

>Every private pilot I know refers to their pastime as "sport flying"
>but nowhere in the FAA regs do you see "sport" mentioned.

Why are we referring to flying? The FAA private pilot licensing
system and associated privileges was chartered for different reasons and
has a different structure than the ham radio licensing system and its
associated privileges. No FAA regulation states that the private pilot
system exists to create a pool of trained wartime pilots, to further
aviation engineering, to provide pilots in time of emergency, etc.

No private pilot I know calls it "sport flying". Plain "flying"
among friends or "general aviation" if you're being official (or GA for
short) in my neck of the woods.

>Besides, many hams consider their service (ARES, RACES, MARS, phone
>patches, message handling) a hobby. Serving as a hobby? Sounds fine
>to me - why scold someone for thinking in that manner?

You're playing with words Jeff and making assertions for me I never
made. The above is exactly coincident with why I think most hams
do perform these services. You have a strange way of thinking Jeff;
I never said you had to find these services to be onerous or drudgery
to be virtuous and meet the charter.

>Tell me, who am I serving when I build a new QRP radio? Who am I serving
>when I call CQ on 40m? I just converted a CB to 10m - who was served?
>I'm restoring a 1958 Globe Scout transmitter - what service am I per-
>forming?

Assuming you aren't learning anything, then none. Just because you
are permitted to do something doesn't mean that it has a useful
purpose. The amateur radio service was chartered to serve a useful
purpose. The fact that you are getting a free ride is merely a
loophole in the system.

When your activities support the service goals you are fulfilling
the purposes of the service. When your activities do not, you don't.

When too many hams fail to fulfill the purposes of the service, then the reason for the service will cease to exist.

>I'd estimate about 1% of my ham time goes to service related duties
>(Oahu Civil Defense RACES). Short of manufacturing more hurricanes
>or tsunamis, that means the remaining 99% is spent on hobby-type
>aspects. Why would that upset you so?

I'm not sure why you think I'm upset; I'm merely reminding you that your privileges were granted for other reasons than your personal pleasure. If you derive personal pleasure from exercising those privileges in furtherance of the stated service goals then you have the best of both worlds. If you don't derive personal pleasure from exercising those privileges or furthering the service goals, then you should find another activity. If you derive personal pleasure without furthering the service goals, then you are getting a free ride earned by others.

>most of the hams in GA are located. Even if the regional rep where
>located in your city, if the ARRL rep is an Extra Class ham who is
>pro-code testing what chance do you have of being heard if you are a
>Tech Class ham?

In both these cases, it sounds like you have an excellent opportunity
to mount a campaign against the sitting state representative. First,
if the state rep is not located in the Atlanta metro area, where most
of the hams in GA are located, then you have a very good campaign
argument: "vote for me, I'm in your neck of the woods and will be more
responsive to your needs". [Of course, this assumes that the state
rep in Savannah *isn't* responsive to needs of hams in Atlanta...}

Second, if the ARRL rep is an extra-class ham who is pro-code, and you
are a tech-class, you have another campaign argument to bring to your
supporters: vote for me, I'm anti-code. Granted, this might not get
you heard, since a majority of hams in your area might support code
testing -- then again, it might work to your advantage too. You never
know until you try.

>Since more than 500,000 hams in the USA do NOT belong to ARRL I think
>there is room for a second national organization to represent them
>(and hopefully also) the other hams too.

There are a myriad of reasons why people do not belong to any national
organization... Your assumption is that those 500,000 people who do
not belong to the ARRL are seeking an alternative to the ARRL. This is
not necessarily a valid assumption.

you'd probably find out that a lot of old timers would lose their licenses.

and you don't want an enforcement agency to benefit from carrying out enforcement of the law (that is, they should be enforcing the law, period..not because if they make a bust, they get a new car for the squad...).

if all the hams were going to be hit by this then that's about 750,000 people and about 10% a year would need testing so that's about 75,000 tests x $2 or about 150,000 dollars. with overhead, that pays for 1 man on one shift. it's not enough.

4108. Re: What is the reason for multiple grades of ham license, anyway?

yeah, part of the reason is to permit people to pass the exam in
bite-sized chunks instead of having to pass an "all or nothing" test.
(especially since the code test is currently holding down that job).

4109. Use a static domain name to refer to your Dynamic IP address!

Newsgroup: rec.radio.amateur.misc

From: Stephan Edelman <stephan@dynip.com>
Message-ID: <338E47DE.51CD@dynip.com>
Source record: 197091

Hello All:

Finally, you can refer to your machine by means of a static domain
name that constantly resolves to your current dynamic IP address
every single time that you are connected to the Internet! Now,
you can run your own packet radio gateway, web server, FTP server, chat
servers, etc. and people will never have to hunt for your current
dynamic IP address again! Other people can access your available
servers and services by simply specifying your static domain name in
any existing Internet application without modification, because
your static domain name is seemlessly integrated into the
existing Domain Name System (DNS) on the Internet!

You can get your own personalized sub-domain within minutes
of running the client software. You can try out the service
free of any charges for 30 days! The client software is
available for Win 3.X (16-bit) and Win 95/NT (32-bit) platforms.
We are in the process of creating FreeBSD and Linux versions
as well as a Mac OS 7.X version. Visit our site at
http://www.dynip.com and give it a try!

Best Regards,

Stephan.

In article <EAwMG5.Lvx@scn.org>, bb840@scn.org (James Aeschliman) writes:

>As long as phone operation is limited to specific portions of the HF
>bands, I don't think there should be a problem. Also, I don't believe
>a CW endorsement is necessary or desirable. Voluntary band plans can be
>used as they are now to identify CW, RTTY, and other segments of the
>bands. The people who want to use CW will learn the code and use it,
>those who don't want to won't. There's no need to create a difficult
>solution to a simple problem

May I respectfully point out that the U.S. is one of the few countries in
the world with sub bands reserved for particular modes. If you've
ever listened to Canadian hams on 40 meters in what is the U.S.
cw portion to escape the broadcasters, you might appreciate that
fact more. Further, we presently have an artificial duality, with most
other countries only running cw in the first 50 KHz of a band, and
the rest used for voice. If one is a cw dxer, one almost requires an
extra class license to work a lot of the available rare cw dx as the
first 25 KHz are where such folks are most likely (for all of those
ready to fire away, or tell me about working dx in the novice bands,
I said MOST LIKELY) to be found. I just can't imagine how the rest
of the world manages without the restrictive U.S. approach, but
then again considering some of the lids I've heard, maybe for the
best.

Glen Quarnstrom <address@sig> wrote:

>The fact is that no matter what you think of code, the alleged "waste
>of time" is no real barrier to anyone who has any significant interest
>in becoming a ham.

Nice assertion. Of course, that doesn't make it so.

There is something interesting about smart people, especially really smart people. They don't like to do things that are a complete waste of time. For many of them, learning CW is a complete waste of time. Let's face it, if you want to experiment with digital communications, error correcting codes, radio networking and the like, learning CW is not a useful step along that path. The fact is, many of the FCC regulations are seemingly specifically designed to keep radio amateurs from experimenting with state of the art or near state of the art techniques.

Again, I certainly believe that anyone who wishes to use CW should do so. I do feel that the CW requirement has long since outlived it's usefulness.

>It's just a convenient excuse for those who don't
>have a real interest in Ham Radio.

Just what constitutes a "real interest"? I suppose I have no real interests, because the idea of working a DX pile up by beeping to somebody in Outer Tasfranzia doesn't appeal. If that is your thing, then by all means, learn Tasfranzian and beep away.

>In that very specific and limited
>sense, CW *is* a filter against those who probably wouldn't contribute
>much of value to the hobby.

Just what does the average ham (i won't even say beeper) "contribute of value to the hobby?". I am curious to know what that might be.

As for it being a filter, that is a complete crock, and you know it.

>Bullshit. What we'd have is a hobby even sicker than it is now, and
>shrinking fast instead of *slowly* growing or holding its own.

The hobby as many people perceive it _is_ dying. The question is only whether it will rise from the ashes of its history and be interesting again, or just die off like vinyl records.

'Amateur radio' is a service. A licensed amateur radio operator is involved in the service as a hobby, an avocation, for ones pleasure without compensation. The words _service_ and _hobby_ in this discussion, are complementary. One would not exist without the other. (At least not without a cost to society.)

My two cents.

I recently purchased an ICOM IC-V68 transceiver.
The book that came with the radio is VERY basic
and does not describe how to use any features
such as the memory or channels. The person who
sold me the radio showed me these features, but I
am thinking that I must be missing OTHER features.

Are these documented anywhere, possibly on-line
where they could simply be downloaded?

Please e-mail me any replies at: millerk@xtrabox.com or
millerk@xtrabox.com

Thank you in advance!!!!

Oh, Kevin, you must not know many Extras. I can think of at least three
that I know personally that don't want anything to do with "god-damned
No-Codes", and I recall quite clearly how Larry Roll treated a new Tech
who was asking for advice on buying an HT a while back (have a look with
DejaNews).

The grapes aren't sour for me, not in the least, and I've seen plenty of
unwarranted Extra-class snobbery. It isn't good for the service, and
shouldn't be swept under the rug or trivialized.

Another good one is the Cushcraft 2m Ringo (not the Ringo Ranger).
It's only 4 ft tall, has no radials sticking out, and can stand in
the corner of a bedroom. They're convenient antennas for tight spaces.

Sure it does, if you want to USE CW to 'talk' to other
people! Why don't you just DO IT and quit complaining. Think
of all the people you could have met on HF in the time you waited
for them to remove the morse requirement.

The rules were already there when you became a ham (if you are one),
so just play by the rules or go find another 'game'. Why is that
so hard to understand?? Sheesh.....

Hi - I think it's Barry. What, may I ask, does one receive along with privilege of membership in the USARA? Also curious about what the organization does besides form committees and have meetings?

Might as well ask while I'm at it - how much can such an ogranization do with practically $0 revenue the first year, and slightly greater than $0 in subsequent years? Might be kinda tough to keep the phone bill paid, don'cha think?.

Our little 300 member club spends about $30 a year per member. All we have are some repeaters, a summer picnic, Field Day, and a newsletter. Even though everybody is a volunteer, the dues just don't go very far.

The good thing about $1 a year dues - everybody is sure to get their money's worth, and it covers the cost of the membership application and renewal forms!

Other than a lack of founding principles, representation, influence, and revenue, the organization is well conceived - really.

I have already posted some of the structure ideas in another posting.
I am paying the phone bill and expenses out of my pocket for now.
If I can get more than 100,000 members I will go to WRC-99 and speak
for the non-ARRL hams position on cw testing. I am for a more balanced
approach. Even if a total ban is not passed I hope to get a 'softer'
treaty adopted. I aim to give non-ARRL hams a national and
international voice. Of course if I only have 10-20,000 members like
FIST then I won't be taken seriously. But there are more than 700,000
hams in the USA. If i can get 250-300,000 to join the U.S.A.R.A. that
would be an organization with more members than ARRL and we just might
be listened to for once. Even the ARRL would have to take notice.

You still need to lose this sig. It's just as inflammatory as
anything Carl posts, if not more so. Plus, it's completely irrelevant
to Ham Radio.

>here, it is service that will fuel the future.

There's no contradiction between the terms "hobby" and "service." You
can put any spin on it you wish, but this is *Amateur* radio, not
professional radio. I can't think of one person who got into the
hobby because he thought that being a ham would be a real drag, but
needed the ticket so he could provide a "service." People get into
ham radio to have fun. Many of them have fun handling traffic,
inventing neat stuff, and all those other wonderful Part 97.1 things.
Others do those things only occasionally, but they're available when
needed.

It's a hobby. It's a service. It's two, two, two things in one.

Beating this dead horse does no good at all. It only obfuscates the
real issues that we should be dealing with.

I didn't say "equipment," I deliberately chose the word "resources."
I'd explain the difference, but I suspect it'd be a waste of time.

Exactly. Or with a 5 WPM ticket, which, for most folks, is a
relatively trivial task to obtain.

>The only reason you blab about a codeless HF license is that you and your
>buddies want to get on HF and blab around the world using SSB like everyone
>else on HF.... You're not fooling anyone. If all your engineering friends
>wanted to be amateurs, innovating today on "those bands the FCC gave us"
>(I refer you to your other posting where you state this about our UHF+
>bands..) they would already be hams today.

That's my opinion as well. If and when the code test is dropped
entirely, there'll be a brief flood of Techs and Generals upgrading to
obtain more privileges, but the alleged mass influx of communications
and radio engineers to the hobby is much more wishful thinking than
actual possibility, IMO. I hope I'm wrong, but I sure won't bet on
it.

>What downward spiral? Amateur radio has always seen a modest, albeit
>small, growth. The only downward spiral is the vortex between your ears.

If you subtract the hams who have died or gone inactive, and are not
picked up in the stats because of the 10 year license, the growth is
likely far less. Plus, the average age of hams is steadily
increasing, which is NOT a good sign no matter how you look at it.

We need more 8-12 year old kids in the hobby, not more 50 year old
farts with lots of money and no interest in learning or innovation.
If you don't get the kid hooked before he's old enough to get
interested in girls and cars, you'll never get him interested again
until he's raised a family and has some extra money and time to play
around with. (Insert proper pronouns, etc, for girls, which the hobby

also needs.)

The point is that once he got that worthless piece of paper, he
abandoned the band. For all practical purposes, he didn't care what
happened to 220 after he had HIS fun. This attitude is commonplace
among hams. I've had more than one ham tell me that they could give
away all of 220 and he wouldn't care one bit.

Are we looking for new hams here, or candidates for employment in the
engineering division of IBM or Motorola?

Leaving aside the fact that the comments in this thread seem to ignore the state of (technical) education in this country, let's be a bit more realistic here, shall we?

After reading all the qualifications expected here for an *entry level* ham ticket, I tried to think of any hams I know who could qualify for such a license. Not very many, if any. This sort of thinking will do far more to decimate the ham bands than any simple code test could possibly do.

Yes, we need more techie types in ham radio, but it's ridiculous to suggest that one needs to hold an E.E. degree to be a good ham. In addition to tech types, we need lots of folks who don't have all that much interest and knowledge of log tables, but have other skills of value to contribute to the hobby.

We need hams with "people" skills as well as with technical skills. We need folks who can organize programs to get young students exposed to ham radio. We need hams who can teach. We need hams who can organize and coordinate packet networks. We need hams who can organize support or opposition to ham-related legislation at the local, State, and Federal levels. We need hams who are interested in getting elected to public office. We need hams with writing and publishing skills. We need hams with PR skills. We need ham salesmen who can "sell" our hobby to "customers" who've never heard of us. And so on.

The ham ticket should not be an advanced degree in electronics, it should be an entrance permit that lets you in the door of a wonderful opportunity to learn, not only tech stuff, but a plethora of other skills, and gives you the opportunity to engage in lots of "service" *other* than inventing new digital protocols, etc.

To borrow from your own argument, Gary, the government should only be interested in requiring that the prospective ham should a good knowledge of the rules and regulations, and enough technical knowledge to insure that he doesn't harm himself or interfere with other services when operating. In fact, I don't see any real reason why most or all of the ham test should not be "open book." With an "open book" test, there need not be so much focus on rote memorization, but instead one could demonstrate the ability to find answers to more complex questions than are already on the test.

Hmmm...perhaps maybe a major reason why Uncle Reed decided to retire as Chairman of the FCC. My local paper of Wednesday, May 28 had an article that Uncle Reed was retiring, mainly to spend more time with his family.

So, what happens when I want to voice my opinions to the CW mode
director at a local chapter? Do I have to fly out to Chicago, if
that is where s/he is located?

Face it: regional representation is generally best because it gives
people the ability to face-to-face address concerns and questions to
their representatives. In this respect, the ARRL organization structure
works best.

wa2ise@netcom.com (Robert Casey) wrote:
>Is there any real reason for having several license grades for ham radio?

(I sure hate to answer this & risk getting both flamed & spammed!
But here goes..)

It really depends on what we wish to accomplish with the licensing
process. Different people suggest different reasons. (kinda like the
criminal justice system - are we trying to get revenge, prevent people
from committing more crimes, deter non-criminals from becoming
criminals, or improve safety?)

The theory that exists (I am NOT trying to either endorse or criticize
this theory here! I do hold an opinion but will keep it to myself..)
is that the licensing procedure should encourage self-training in
radio technology & operating procedures. (goals which are in fact in
the FCC regulations, though admittedly those regulations could be
changed if we decided we wanted to)

If we accept that theory (and right now, the majority of amateurs do)
then it makes sense to provide an incentive -- additional frequencies
-- for those who train themselves in these areas.

True. KYW started in Chicago.

The Cleveland years are involved in a rather complicated legal
situation involving an allegedly forced transfer of control back in
the 1950s or 1960s.

why do I have to give out my call sign anyway ?
what's the purpose ? I want to know.

Well, if you want to know, you can look up on Canadian Database.
Are you trying to use my call sign to make a clank patch-call or what
???? Talk someone with my call sign ? It's a very bad idea. I
strongly discourage you from doing so.

Glen, I agree that the attitude you comment on is too prevalent ...
but it should also point out that the ham in question could more
accurately be classified a a "contester type" or "awards hound"
more than a "techie" ... I saw nothing in the story about the
220 WAS guy that indicated he was anything but a wallpaper
collector ...

Aloha, Seems you overlooked the closing sentence
in my preamble statement. Look again; been using CW
for 47 years, continuous. Guess I probably learned it
back there sometime. Used the crank up, spring wound
Instructorgraph. Machine pulled punched paper tape between
a pair of contacts wired to a battery and buzzer. Pretty
effective trainer. The FCC examiner smiled when he read
my 100% perfect solid copy for the entire time he sent to
me by hand(about 13 wpm) at the examining office.(Was
interesting to have the same reaction by the VE team a
few years back when they read my 20 wpm copy for the
Extra ticket: they had not seen much correct copy for
the entire 5 minute period. I didn't take the multiple guess
test, no need to!).

He also liked my straight key CW "fist". The Instructograph
did a GREAT job teaching correct sending of CW.

Got my license a few weeks later: W6KPI, which I kept for 43 years
until moving out here; at last got a Hawaiian call. Sorry
I sold my "bug" after getting married, needed funds! Anyway,
now have a keyer and iambic paddle; still learning to use them well.
So keep the old faithful st. key right here in the center of the op table,

hi.

BTW, did you read my article in last September's CQ
about how to become a QRQ CW op? Was in the
Contesting section that month.

Did pretty well in last July's WRTC competition: using a 40 meter
dipole, and tribander, won the Oceana/Pacific Division plaque,
both SSB and CW modes used. Looks nice here on the wall,
but nobody else on the planet gives a hoot about that, just
me.

Don't really believe that I would be considered a CW "whiner"!

The ARRL BOD are going to have a difficult couple of years;
and it will become more difficult if / when the ITU drops
the CW test from the treaty if they and the Executive
committee do not have their plans well thought through
for that day.

Perhaps your new organization will be able to gather up enough
of those who feel non-represented by the ARRL to bring a
new view and set of pressures to bear upon the FCC.
Such could be good for the hobby (oops, service).

73 and ZUT, (What's ZUT?? Old, old Navy CW salutation!)

Jim, KH7M

> as using "ban". I suppose the meaning is the same, but I didn't say it.

I did not intend to imply that I was quoting you when I used the "ban"
in my reply, Fred ... but, as you seem to acknowledge above, "the desire
to displace Morse Code as an operating mode" certainly *sounds* like
you were implying a desire to "ban" the *use* of Morse, and that implication
is patently false ...

> It is not MY hazing ritual.

It *is* if you are part of the force that insists on maintaining it ...

> It has existed from Day One in ham radio,

T-Rex once existed, too but he's not around any more ... Morse
testing (NOT the USE of Morse on a voluntary basis) should become
extinct, too ...

> and many are now posting re how we are going to perpetuate the use of
> Morse Code after 1999 when they think code testing will no longer be
> required. It's a valid concern. It is why FISTS exists. A dislike for
> the mode is what drives most people to want the testing stopped.

I can dislike the mode myself, but still realize and accept that many
enjoy it and value it ... however their feelings do NOT "justify" forcing
me to "join in the fun" when it's NOT "fun" for me and I consider it a
waste of *my* time ...

I don't know ANYONE who would try to take the code away from you.
All those who don't want to be bothered with it want is to not be forced

to go through the unpleasant (to them) ordeal of trying to pass a test
that has NOTHING at all to do with the aspects of ham radio that they
DO have an interest in ...

If Morse *deserves* to survive, it will ON ITS OWN MERITS, not through
forced indoctrination ... most who do it just to "jump through the hoop"
end up hating it even more and vow to NEVER use it ... if they were
licensed without discrimination, they might at some point decide to take
it up on their own ... and even if they never do, it's no harm to you ...

> 2) With all due respect, Carl, wash your mouth out. People who talk the
> way you do get no respect, at least not from me.

Grow up a bit and loosten up a bit Fred ... when I said "that's a crock ..."
I mean "that's a blatant falsehood ..." OK??? most adults that I know
have heard the "s-word" before and don't come unglued over it ...

> The fact that in
> another NG you apologize for not making clear you don't talk this way on
> the air is fine, but the words you choose to use in this venue speak
> volumes about you. Many of your posts are very "well-spoken". It seems
> that you lose control when someone makes you ANGRY.

Sometimes, "coarse" words convey a sense of seriousness and
intensity that are impossible to convey with "Ms. Manners" dialects ...

BTW ... I read your comments to the ARRL that you posted here,
too ... I thought they were a crock of shit, too ... sorry 'bout that,
but that's the way *I* see it ... of course, I recognize your right to
convey your thoughts on the subject to the BOD ... I just find it
sad that your ideas are so out of touch with the world, modern
technical and regulatory climates, and reality in general ... but you
have every right to feel that way ...

> new Extra be? Just curious...

I'd probably get on the air in the "lower 25" and beep "CQ" *real* slow
for a while, just to piss you off, Roll ... :-)

Seriously, I'd have to do some planning for that eventuality, and find
some folks like Gary to cooperate with in on-the-air experiments, just
to make the best use of the available time on the bands ...

BTW ... I have no problem with theory testing ... except that the
test methodology needs fixing to keep the know-nothings from
getting licenses that they're not qualified for ... and the material
could be modernized and kept up to date ...

Below is an overview I put together a couple of months
ago for a mailing list about U.S. call letter practices:

****
Following is a summary of the information I've uncovered
on early United States call letters. This is mainly a
recap from two of my web page articles: "Mystique of the
Three Letter Call Signs", and "K/W Call Letters in the
United States", plus some additional notes.
****

SHIP IDENTIFIERS, PRE-RADIO

Beginning around 1868, the U.S. Bureau of Navigation
(then a part of the Treasury Department), issued annually
a "List of Merchant Vessels of the United States". In
this list, each U.S. vessel was assigned an unique
"official number" as its main identifier. In addition, in
the period through 1933 about 25% of the ships also
applied for and received optional "signal letters", which
were assigned by the Bureau.

According to the 1893 edition of this list, in 1856 a
visual signalling system had been developed by a
committee of the British Board of Trade, and "what is now
known as the 'International Code of Signals' has since
been adopted by the following nations for use of national
as well as merchant ships: England, France, Germany,
Russia, Brazil, Italy, Austria, Holland, Spain, Sweden
and Norway, Denmark, Belgium. Portugal. Although in
general use by vessels of the United States as well as
other countries, our Government has not yet formally
recognized the 'International Code'".

The International Code of Signals system used five flags for each vessel's identifier, consisting of a national flag, followed by four letter flags. The letter flags were restricted to the consonants. (I do not know why this restriction existed, although it may have been to avoid creating words that might be found offensive). According to the review, the letters available for assignment within each jurisdiction included the 1440 combinations from GQBC through GWVT, which were reserved for government vessels, plus the 53,040 combinations from HBCD though WVTS, which were available for merchant ships.

With the introduction of radio, ships could also get separate transmitter call signs. Until 1933 there is no apparant relation between the visual identifiers and the radio call signs assigned to U.S. ships. (By 1932 the Government ships were still assigned 4-letter G--- visual signals, while in the U.S. the 25% that had been issued visual signal letters held four letter goups ranging sequentially from H--- through M---. As always, only consonants were used.)

Finally, as of the 1933 list, the separate visual signals were dropped. At this point ships that had radio transmitters were instructed to use their radio calls as their Signalling identifier, and non-radio ships were no longer assigned visual identifiers. (By this time radio calls for U.S. non-government ships consisted exclusively of four-letter K--- and W--- calls).

EARLY RADIO

The use of identifying letters is almost as old as radio itself. Because all early radio work was done in telegraphic code, spelling out an operator's name or location was cumbersome. Abbreviations of one to three characters, usually based on geographic location or personal or ship names, were naturally more convenient. Operators independently adopted identifying "call signs", so that stations "calling" each other through the ether were able to link up with a minimum of sorting out identities. Unfortunately, during this self-assigned era there were few standards, which resulted in problems when, say, two or more ships chose the same call. Unique identifiers, organized by national origin, were needed in order to keep track of exactly which vessel was in danger of visiting Davy Jones' locker.

According to part 2 of section 4 of the Service Regulations of the 1906 International Wireless Telegraph convention, Coastal and Ship stations were to have call letters "distinguisable from one another and each must be

formed of a group of three letters". However, reviewing the station lists, many stations were slow to make the switch to three-letter calls, and there doesn't seem to have been any mechanism for insuring unique calls. Beginning around 1908 most of the Marconi-equiped stations began using three letter calls starting with M (hence the Titanic call, MGY), and the U.S. Navy switched to three letter calls starting with N around 1909. However, through 1912 there were still many stations still using calls of just one or two letters.

1912

With the adoption by the United States, in 1912, of an act to regulate radio stations, this practice became formalized under federal authority. Under international agreement unique initial letters were allotted among the various nations. The 1914 edition of "Radio Stations of the United States" records the contemporary practices for allocating calls for sea and land stations, which at this time were few enough so that all could be given three-letter calls:

==========begin==========
The call letters assigned to the United States are all combinations (676) beginning with the letter N and all (676) beginning with the letter W, and all combinations (598) from KDA to KZZ, inclusive. [NOTE: KAA-KCZ was allocated to Germany at this time, and was not assigned to the United States until 1929.] The total number of international calls is thus 1,950, and these are reserved for Government stations and stations open to public and limited commercial service. All combinations \ beginning with the letter N are reserved for Government stations and in addition the combinations from WUA to WVZ and WXA to WZZ are reserved for the stations of the Army of the United States. The combinations KDA to KZZ, with a few exceptions, are reserved for ship stations on the Atlantic and the Gulf of Mexico and for land stations on the Pacific coast. The combinations beginning with W (except WUA to WVZ and WXA to WZZ as already indicated) are reserved, with a few exceptions, for ship stations on the Pacific and Great Lakes and for land stations on the Atlantic and Gulf coasts and in the Great Lakes region.
==========end==========

Notice the policy was that calls for coastal ship stations started with a different letter than the land stations they communicated with: in the West ships received W-- calls and land stations were assigned K--, while the reverse was true in the East, with K-- ship

calls and W-- land calls.

NOTE: I have never seen any reason suggested why the U.S. got the specific assignments of K and W. My best guess is "because all the good letters were already taken". The assignment of N obviously was a continuation of the use of that letter by the U.S. Navy, begun about three years previously.

Amateur and Special Land stations fell into a separate call sign scheme. In fact, they did not qualify for "international" calls, and the International Bureau at Berne was not notified of their existence. The United States was divided into nine radio inspection districts, and amateurs received calls consisting of their district number followed by a pair of letters, for example 8MK. An X as the first letter was reserved for experimental stations. Similarly Y designated the station as being operated by a technical or training school, while Z conferred "special amateur" status. Ordinary amateurs made do with the less exotic letters of the alphabet. The 1914 Radio Stations of the United States noted that "The three items-a given figure first, followed by two letters of the alphabet-thus may be combined in 598 different calls, which will probably suffice for the amateur sending stations in most districts for some time to come". (More letters and numbers were added as the number of amateurs grew. Also, as the range of amateur signals increased it became necessary to internationalize their calls, so beginning October 1, 1928 W and K prefixes were added).

REFINEMENTS

The Bureau of Navigation, a division of the Department of Commerce, regulated United States radio until the 1927 formation of the Federal Radio Commission. In 1934 the Federal Communications Commission succeeded the FRC. Understandably, the various agencies occasionally found it necessary to refine call sign practices.

World War I also had a disruptive effect. German submarines did much to popularize radio among American ships as wireless, formerly an expensive option, became a life-or-death necessity for making the Atlantic run. Unfortunately, there just weren't enough three-letter calls to go around. The obvious solution was more letters, and four letter KE-- signs became the predominate issue for the rapidly expanding ship service, generally issued on a first come, first served basis in alphabetical order. The department, apparently noting the existence of the Panama Canal meant ships might show

up on either coast, no longer tried to give ships calls that differentiated between the east and west coasts.

The less numerous land stations continued to receive three-letter calls, as turnover provided a reserve pool. Actually "turnover" is in some cases a euphemism. A few land stations, including broadcasters WSB Atlanta and KLZ Denver, received calls that became available with the demise of the ships that had used them. Because superstitious seafarers objected to being issued the calls "used by that ship which went down with all hands last month", some "tainted" calls were quietly issued to unsinkable land stations.

THE KDKA ANOMOLY

Showing partiality to vowels, the next major blocks drawn upon for ship stations were four-letter combinations of KI--, KO--, and KU--. After exhausting the vowels, and with KA-- to KC-- not yet assigned to the United States, the first available consonant, KD--, was drafted beginning June 1920. At this point an anomaly occurred. The Bureau, perhaps caught up in a burst of egalitarianism, began assigning the last of the KU--, and the new KD-- calls to most stations, whether land or sea. The result, on October 27, 1920, was that a new Westinghouse station in East Pittsburgh, Pennsylvania, KDKA, was sandwiched between the ships "Montgomery City" (KDJZ) and "Eastern Sword" (KDKB). The "KD-- for everyone" policy continued until April, 1921, when the original three-letter land station policy was reinstated. This meant that, in May, 1921, when the second Westinghouse broadcast station, WJZ in Newark, New Jersey (now WABC, New York City) was authorized, the original call policy had been restored. Much speculation has been made about the unique status of KDKA's call, but this uniqueness actually is just a fluke, due to the fact that no other surviving broadcaster was licenced during this short anomaly. Had KDKA been licenced a few months earlier or later it most likely would have gotten a three-letter W call like everyone else.

NOTE: two other land stations licenced during this anomaly, KDPM Cleveland, Ohio, and KDPT San Diego, California, both originally non-broadcasting service stations, later transferred to the broadcast service but were eventually deleted.

NOTE: I haven't found any explicit reference to the temporary switch to predominantly four-letter K assignments, but the pattern is clear when reviewing the Radio Service Bulletins. By my count, in the 8/1/1919

through 6/1/1920 RSBs there were 39 non-government land station grants, with 33 (85%) of these getting three-letter K or W calls. But during the next month fully 15 of the 21 grants received four-letter K calls, and, for the entire 7/1/1920 through 5/2/1921 period, 49 (73%) of the 67 grants received four-letter K calls, including KDKA. Then there was an abrupt switch back to three letters, with all 18 of the land station grants in the 6/1/1921 to 9/1/1921 period getting three-letter assignments.

K/W DIVIDING LINE

In the early teens most non-amateur land stations engaged in ship-to-shore communication, and were found clustered along the coasts. As other services were developed stations crept inland, and a dividing line between the western K's and eastern W's was needed. As noted earlier, coastal land stations in states along the Atlantic and Gulf coasts, including Texas, received W calls. Thus, using the Texas-New Mexico border as a starting point and heading north, the original boundary ran along the eastern borders of New Mexico, Colorado, Wyoming, and Montana.

NOTE: I've never found any official specification for the original land station dividing line between the K's in the west and the W's in the east. However, there were enough inland stations to require some sort of continental dividing line. My working theories were:

1) A specific line of longitude.
2) The division between the mountain and central time zones.
3) Some sort of grouping of the nine Radio Inspection districts.

I took a graphical approach, i.e., I bought a big map of the United States, and plotted the land station assignments reported in the Radio Service Bulletin from 1915 through 1923. From this it became clear that none of the above three theories was correct--two of the radio inspection districts were split between K and W calls, and the calls didn't break out by longitude or time zone.

West Texas proved to be particularly informative. Stations in El Paso got W calls, even though El Paso is west of Colorado Springs and Denver, Colorado, and Laramie, Wyoming, all of which got K calls. The overall pattern: during this period virtually all the inland stations in Texas, Oklahoma, Kansas, Nebraska, and the Dakotas got W calls, while all the land stations in

Montana, Wyoming, Colorado and New Mexico got K calls. Therefore, I've concluded that the original dividing line was based on state boundaries. Because it was a Gulf coast state, Texas got W calls. Then the line went north to the Canadian border, running between the states listed above.

MISSISSIPPI RIVER

It was only in late January of 1923 that the Mississippi River, the current standard, was adopted as the dividing line. This meant new call grants in North and South Dakota, Nebraska, Kansas, Oklahoma, Texas, Iowa, Missouri, Arkansas, and western Minnesota and Louisiana became K's rather than W's. However, existing stations west of the Mississippi were permitted to keep their now non-standard W calls. Thus, pioneer broadcasters such as

WKY Oklahoma City, Oklahoma, WOI Ames, Iowa, and WHB Kansas City, Kansas remain as monuments to the period before the boundary change.

In reviewing the stations on the AM band, many people have noticed that some of them have the "wrong" first letter for the side of the Mississippi River on which they are located. In reviewing the last seventy-five years of call letter assignments for AM stations, I came up with six categories of non-conforming stations:

1. Stations located east of the Mississippi which were assigned calls from the KD-- ship block, instead of W--, during the June 1920 to April 1921 anomaly. (Two stations: KDKA and KDPM)

2. Stations west of the Mississippi River that were licenced before the late January 1923 boundary shift, and were located in the slice of W territory that existed west of the Mississippi prior to the shift. (Originally about 170 stations, not including Minnesota and Louisiana. However, due to very high deletion rates plus later call changes, only twelve of these original calls survive: WEW, WHB, WKY, WOC, WOI, WBAP, WDAF, WDAY, WJAG, WNAX, WOAI, and WTAW).

3. Portable stations (prior to 1928), which got W call letters because their original owners were located east of the Mississippi, but settled in a permanent home west of the Mississippi. (Four stations: WBBZ, WIBW, WLBN, and WMBH. There are no examples of a portable crossing in the other direction, i.e. no K portables "anchoring" in W territory).

4. Regular stations that changed their city of licence to the other side of the K/W divide. (Four stations: KFHX, KSGM, KWEM and WKBB. NOTE: This omits Louisiana and Minnesota.)

5. Owner requests--examples: WACO in Waco, Texas; WDBQ in Dubuque, Iowa; WMT (Waterloo [Iowa] Morning Tribune).

6. This is somewhat speculative on my part, but two of the call assignments appear to have been selected by government regulators: KYWA Chicago, a booster station for KYW, and KOP, licenced to the Detroit Police Department.

NOTE: Although KOP clearly was specially selected for the Detroit Police Department, to me it seems most likely that, instead of it being a requested call, someone within the Department of Commerce chose it, as a joke. I'm not sure that police in this era really liked being called "cops", or that they knew enough about radio to request call letters. But this is pure speculation--eventually I want to get the original Form 761s for the KOP and KYWA applications and see they have any additional information. By the way, according to a short article in the Oct., 1925 Radio Broadcast, at that time L. A. Corridon was the person responsible for selecting call signs. Finally, there are about a dozen stations for which I can not come up with any apparent reason--perhaps someone momentarily forgot about the policy, or where the boundary line was, or maybe I just need to do more research. The most prominent of these "undocumented" stations are KQV Pittsburgh, KSD Saint Louis (assigned before the boundary shift-now KTRS), and KYW Chicago (later Philadelphia and Cleveland).

Although I haven't been able to find out the exact date that the K/W boundary for land stations switched to the Mississippi River--the change was barely reported in the press--I have been able to narrow it down to late January, 1923. In reviewing the call letter assignments for broadcasting stations in the original W-west-of-the-Mississippi territory, it appears that the change took place sometime between January 19th and January 29th. The first date is when the State Normal School in Mayville, ND was assigned WRAC and the Taylor Radio Shop in Marion, KS was assigned WRAD. These apparently were the last two stations to fall under the old scheme. The next call assignment to a broadcast station located in the original W-west-of-the Mississippi territory that I am aware of did not come until ten days later. This station, licenced to Fred Mahaffey, Jr., in Houston, TX, was assigned KFCV, and from this point on K calls were issued to virtually

all stations west of the Mississippi. (KFCV was deleted January 5, 1925).

NOTE: I've only found a single contemporary reference to the adoption of the Mississipi River dividing line--a one paragraph writeup in the June, 1923 issue of Radio News.

SWITCH-OVER TO FOUR-LETTER CALLS

The flood of broadcasting service authorizations that began in earnest in December of 1921 served to overload the recycling three-letter land station calls. Before the crunch the Bureau was able to assign three-letter call signs to about 200 broadcasters.

It was the more saturated East that was the first to feel the pinch. On April 4, 1922 an application from the Times-Picayune of New Orleans broke new ground with the assignment of WAAB (now WJBO, Baton Rouge) as its call. [NOTE: WAAA was skipped as no sign was permitted with the same letter three times in a row.] The progression continued in alphabetical order, with "A" fixed as the third letter, i.e. WAAB, WAAC, WAAD... WBAB, WBAC... etc. This explains why so many pioneers such as WBAP Fort Worth, Texas, WCAU (now WPHT) Philadelphia, WEAF (now WFAN) New York City, WHAS Louisville, Kentucky, WKAR, East Lansing, Michigan, WMAQ Chicago, WOAI San Antonio, and WTAM Cleveland share this same middle letter. In later years it became the norm for broadcasters to ask for distinctive calls. However, if they had no preference they were assigned calls from blocks used for a variety of radio services. Starting April of 1923 calls centering on "B" were issued, including WBBM Chicago, WCBM Baltimore, Maryland, and WMBD Peoria, Illinois. In mid-1928 there was a jump to the middle of the W-D- block, which yielded WHDH Boston (now WEEI) and WRDW Augusta, Georgia. W-E- calls followed beginning in early 1931, including WDEV Waterbury, Vermont, WEEU Reading, Pennsylvania, and WFEA Manchester, New Hampshire.

The West held out until May 8, 1922, when western broadcasters started sharing the four-letter ship blocks. KDYL in Salt Lake City was both the first authorization and last survivor of this group. When it became KCPX (now KFNZ) December 21, 1959 all thirty-two KD-- authorizations from this switchover had either expired or changed calls. There is currently a KDYL in Salt Lake City, but this station only dates back to 1945 and has been KDYL only since 1982.) The KF-- block, begun June 1922, boasts a few more noteworthies, including KFBK Sacramento, California, Doc. Brinkley's infamous KFKB, KFNF Shenandoah, Iowa (now KYFR), KFQD Anchorage, Alaska,

and KFYR Bismarck, North Dakota. The KG-- group was tapped July 1926: KGEZ Kalispell, Montana and KGFJ Los Angeles are two that survive to this day. (A ship station was not as fortunate. KGOV was assigned to the Morro Castle, which went on to burn spectacularly off the New Jersey coast in 1934). KH-- calls were reserved, beginning in 1927, for a new service category: Commercial Aircraft Stations. Surprisingly this group included a short-lived broadcast authorization, KHAC, issued in late 1927 to Flying Broadcasters, Inc. in San Francisco, for "Airplane (unnamed)". The KI-- block was drafted in early 1932, which resulted in KIEV Glendale, California.

The source of the Mississippi River is in upper Minnesota, so using it as the K/W boundary leaves a gap in the northern part of the state. In 1987 the FCC noted that the current staff practice was to define the remainder of the boundary as "a line from the headwaters of the [Mississippi] to a point [at the Canadian border] just east of International Falls".

Notes
=====

The distances were calculated using the International Ellipsoid of
1924 (polar radius 6356.912 km, equatorial radius 6378.388 km).

A description of the method used to calculate distances, with C source code,
is available can be downloaded as a 225k Word 6 file from the Internet at
http://www.kirsta.demon.co.uk/dxrechow.doc.

Propagation modes are those reported by the stations concerned.
However, it can sometimes be very difficult to distinguish between
propagation modes. This is especially so on 50 MHz, where mixed-mode
QSOs are common, and to a lesser extent it applies on 144 MHz. The
propagation information should be read with this in mind.

Station positions were taken from the best available information,
in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.
4. Distance as claimed by the QSO participants.
5. Corner of locator square nearest to QSO partner

Calculated distances may change if better information on station
location becomes available.

If you have any information on a possible record or exceptionally long
distance QSO please send it to the IARU Region 1 VHF/UHF/Microwave DX
record co-ordinator:

John Morris, GM4ANB,

via packet: GM4ANB@GB7EDN.#77.GBR.EU
via e-mail: john@kirsta.demon.co.uk

An on-line copy of the latest version of the table is at:

http://www.kirsta.demon.co.uk/records.htm

Just what "service" does amateur radio provide? Passing out coffee
from a Red Cross truck or totally non-essential communications in
a disasted area that can now be provided by cell phone and numerous
other methods? Listen to some of the stuff on 20, 40 and 80 meter
phone and then come back and talk about "service." It's a hobby and
a pretty ugly one at that.

While I'm generally ignoring Mike these days, this one merits a
response, not because Mike is attempting to insult me, but because
some innocent person could get a wrong idea and make a mistake
that could cause them a serious problem ...

The simple point that Mike fails to grasp is that the US licensing system
is TOTALLY IRRELEVANT when one is IN Mexico, where I held a the license
in question. Foreigners are REQUIRED to obtain a permit from the MEXICAN
government before operating within their teritorial jurisdiction ... *NO* US
ham
licenses of any kind are valid for operation there ... (at least at the time
when
I was there) ... it's THEIR country and THEY regulate the use of the spectrum
there ... to operate WITHOUT a valid MEXICAN license is ILLEGAL in
MEXICO and would subject a violator to arrest, fines, and confiscation of all
of his/her equipment ... (I would point out that while Mexico is a lovely
place
to visit, I am given to understand that that ambiance does NOT extend to their
jails, which I am told "SUCK")

I didn't realize that even Mike was enough of an "ugly American" to suggest
that one "lacks character and backbone, should one not outright ignore and
violate the laws of foreign countries he might visit" ... I'm certainly not a
scofflaw,
so I got a license as required by law ... I strongly suggest that as the proper
course for all hams (not just Americans) visiting any foreign country ...

Readers should not permit Mike to persuade them that "getting a license to
operate from the host country's telecomunications authorities while within
their
territorial jursidiction shows a lack of character and backbone ..." Such an

approach to "Diplomacy a la Mike" is likely to cause one serious problems.

I lived in Cleveland when WNBK, channel 4, changed it's channel
assignment to channel 3 and also changed the callsign to KYW.

KYW later went to a station in the Phila area.

There is also a FM station in Dallas with the callsign WRR.

So, in other words, you're not really interested in starting an
alternative amateur radio organization, you're really interested in
funding a political action committee to lobby for your position on
CW testing.

And... Let's say, for sake of argument, that a majority of people
who joined your organization supported continued CW testing... What
would you do then?

I agree with this assessment wholeheartedly. I do think that there
would be a "mass upgrade" of existing license classes below Extra
to obtain, at a minimum, "Advanced" level privs (some rightfully
argue whether or not the add'l voice privs are worth the work you
have to put in to take the exam.)

I also believe that we will see a high-growth spurt for a short term,
say, 3 to 4 years. During this time I believe we will see influx from
two categories of people who currently do not have amateur licenses:
1) people like Carl's buddies who do not have licenses but want to
get on HF to yack using SSB, and 2) a large number of people currently
using "CB" radios so that they can 'legally' work DX with 1.5kw. Even
though 'illegal', DX is still a popular sport among people in the CB
world. I believe a large number of these people would migrate into the
amateur service to take advantage of our wider band privs. Naturally
there will also be some other people like those Carl claims exists,
but they will be a vast minority, just as they are today.

Given both of these occurances (I don't think either assessment is
really debatable -- I think they are both logical, rational assessments
of what will happen) -- how does amateur radio benefit? Do we
benefit in "saving our bands" from commercial threat? Do we see
greater technical innovation amongst our members? I have not seen a
precise analysis of how opening HF privileges to more people benefits
the amateur service in any way, with perhaps the exception of having
more bodies on HF for the purposes of passing emergency communications
traffic (but then again, there doesn't appear to be a shortage of people
to do that now...)

>If you subtract the hams who have died or gone inactive, and are not
>picked up in the stats because of the 10 year license, the growth is
>likely far less. Plus, the average age of hams is steadily
>increasing, which is NOT a good sign no matter how you look at it.

Look, I think it is only natural that amateur radio eventually die.
Everything has a lifecycle. "Radio" was a big thing in the 30's and
40's. Look at how major "networks" used to create 'mystery theatre'
shows, etc., which people would weekly gather around the radio to
sit and listen to....

Today, that activity has been subplanted by other activities. Mainly,
watching the television. Some would say that was technical progress.
However, others would disagree. Families now spend less "quality time"
together, like they used to listening to the radio every evening.
People no longer have to use their imaginations, they now have the
picture drawn for them... So, technical progress was made, but at
what societal cost?

I think the same will happen to amateur radio. Sure, I think that
amateur radio will be around for a long time, but I suspect over
time more and more frequencies will be lost, and the role of
amateur radio in society will become less and less... This is
not necessarily a bad thing.

>We need more 8-12 year old kids in the hobby, not more 50 year old
>farts with lots of money and no interest in learning or innovation.
>If you don't get the kid hooked before he's old enough to get
>interested in girls and cars, you'll never get him interested again
>until he's raised a family and has some extra money and time to play
>around with.

I don't know about you, but when I was eight I certainly didn't understand
phase angles.... I was out playing baseball with my friends, not
sitting in the basement becoming an introvert. I suppose amateur radio
will always have a place, for people who are shy and want to avoid others.

Maybe that is the way the hobby could grow -- by exploiting those
inherent insecurities which cause people to hide... "Fat? Lazy? Zits?
So Ugly girls won't give you the time of day? Join the ranks of amateur
radio, and talk to hundreds of thousands of losers just like yourself!
Hide behind the anonymity of the microphone. Nobody need know you suffer
from chronic BO... Join today! (please send $25 plus 2 tony-tiger boxtops
to: Free License, Newington, CT)"

There's a marketing promotion the League should undertake immediately.
Guarenteed millions will join overnight.

Hello Glen,

Unfortunately, you've stumbled on Carl and Gary's "dirty little secret".
They don't like the existing "filter" for entry into the world of
amateur radio (combination theory/code), so they want to replace it
with a filter more to their liking (EE-level theory).

Looking at the list of "requirements" they posted, I know of very few
people, with the exception of several engineers in one of the clubs
I'm a member of, who have had that level of mathematics in school. I
agree with you, however, that we don't need purely technical types in
the hobby -- being involved in local emergency management activities,
I know first-hand that more important than techies who understand how
to build a circuit from scratch are operators with basic assembly
skills who know how to set up and operate an emergency communications
station. Operating skills, not technical skills, are more important in
this arena. This is something the "technocrats" like Carl and Gary
refuse to accept.

It is a fairly well-accepted fact that any time you "lower the railing"
in terms of standards you open the door for a wider range, larger number
of people to fit through that door. Its also a fairly well-established
fact that without any "filters" to the contrary, you will accept

people who fall throughout the bell-curve of intelligence passing through that door.

Hence, in order for Carl/Gary to achieve their panacea of a "technical" amateur radio service, they will have to replace the existing licensing examinations with tests which are significantly more difficult -- thus, filtering out the 'ignorant' (non-technical) people who currently exist in our service. Considering that several people claim (didn't Carl himself claim?) that there is a significantly high failure rate in the existing licensing system, it would seem that by raising the bar you're going to fail yet even more people than under the existing licensing system.

A reasonable compromise would be to structure the licensing system around both components. One way to do this would be to have examinations which grant full access with limited power levels, operating commercial equipment, to people who pass examinations on basic theory, operation, safety, and rules and regulations. Higher power limits and ability to build and operate "home-brew" equipment could be granted to people who have taken more rigourous examinations on safety and radio/electronics theory.

Hi...

I just bought a Casio HPC for work but I'd like to be able to do portable packet with it while I'm out on business trips. Have you heard of any software TNC's like BayCom or PMP that will work in the Windows CE operating system? I don't want to lug around a real TNC. I'd like to be able to use my BayCom or PMP-style modem with the serial port.

Thanks in advance,

Right on Jerry ... and that "service" is of two kinds ... the kind that you put
in at a Red Cross shelter or a fire camp, etc. ... and the other kind that
comes
from the "public interest" value of self-education, improving levels of
technical
skills and knowledge, and experimentation that helps to advance the SOTA ...
both kinds of service require, use, and contemplate constantly improving levels
of technical knowledge and skill in our community ... without that, we cannot
meet the mandates set forth in Part 97 ... no matter how loud some may whine
"it's JUST a HOBBY" they can never change the true purpose and raison d'etre
of the SERVICE ...

> Maybe interesting, but completely different, too ... mark yourself down
another 10 points for yet more irrelevance ...
>

No, I'd rather not do myself that disservice. If the argument is now that
morse is not in tangible terms such an impediment to those who would like
to pursue their hf ambitions, but rather such a strong psychological symbol
it has a kind of social multiplier effect, than that is calling on the
powers of hocus pocus. At least coming from those who deny the merits of
anything but cold logic in the conversation of morse code/exam
requirements.

But the thought is ambiguous in that it also seems to lay the symbolism at
the feet of those who favor code testing. Seems that everyone's
mesmerized.

I don't believe you, but it doesn't matter either way. Whatever consensus reasonable people build upon to resolve issues such as this will work themselves out reasonably and fairly.

> All I ask is the same courtesy ... don't insist on stopping me and others

I'm not stopping you and others from doing anything. I haven't promulgated any rules or regulations. Noone from the FCC has called me to ask my opinion. The ARRL did, do their credit and I responded. That's the way change is accomplished. Not thru insult and innuendo, blatant or thinly masked. I think the reasonable arguments have been laid out repeatedly. I'm basically, weighing in to say stop the madness...:) If people choose on principal not to learn cw, then i support their choice. If others choose to do so, even though requirements may or may not change in 1999 or 19?? then i support theirs too. And bullies who want to leak up their legs and say its raining have to know that average people do care. I've responded to people on both sides of issues who forget their humanity.

But otoh, i realize its a like an avocation to some: the art of the slant...

Thank you for that rational presentation, Art ... now if we could only
get the ARRL out of the way, it would probably be relatively easy to
convince the FCC to do something very much like that ... but we do
need more .. we need to restructure the license classes to sweep
away the vestiges of the perverse code-based caste system created
by the "Incentive (to copy faster and faster Morse) Licensing" system.
We also need to update the technical rules to remove ridiculous barriers
to the very purpose for our existence (experimentation with and development
of modern communications technologies and techniques ...)

> contest in Jan the cw stations stretched from 1.800 to 1.880...So far
> nearly 5,000 different calls have been noted!.

The point of this is what??? I would suggest that it's primarily that the
DX gamers seem to slant their operations towards CW ... that skews
"the statistics" quite a bit ... like the way the recent Heard Is. group
deliberately limited their digital operation to a small fraction of the
effort compared to CW operation ... if that's what they want and choose,
OK, but don't quote stuff like that as "demonstrating the huge dominance
of CW" ... all it shows is that some gamers prefer to play in Morse ...

> I don't see any change in activity in the CW bands after WRC 99 no
> matter what...and the FCC probably will not make any changes beyond
> some revision of the recent ARRL proposals.

Then forced learning and testing rituals should not be needed to prop
up the body ...

> The CW bands are active
> (especially the lower 50Khz) so they will not be allocated away.

I haven't seen anybody (including the anti-code-TEST crowd)
suggesting that they should be ... that suggestion is nothing
more than a pro-code-test red herring that gets tossed out
once in a while in an attempt to generate FUD ...

I honestly couldn't tell you ... since I'm not into competitive games or
wallpaper collecting I haven't bothered to keep track ... but I've worked
quite a few Japanese stations ... used to work them on 40m CW late
at night from California, and worked some on 40, 20, and 15 from the
west coast of Mexico ...

> Oooops, what's that? Speak up -- I didn't hear you? Did I hear you

Actually, Kevin, with a foreign license from a foreign country, were
everything was quite legal and the majority of the hams were friendly,
polite, and trying to learn about radio and do modern things ... what
a contrast with the climate here, where stagnation and class bigotry
abound, all nicely promoted by the ARRL ...

> As far as our "Hispanic brethren to the south" go, I don't think that
> the Mexican government much cares what they do as long as they pay
> their money to get the "license."

That's really not true, Kevin ... everywhere I went, the local officials
(even the Regional Directors) were hams and simply glad to have
a visitor to talk to, invite for dinner, show their station, invite to the
local club meeting, ask questions of, etc.

The license was just a "necessary formality" and the amount of
money involved was rather small ... simply an administrative fee
to cover the costs of paperwork (I have to admit that they *love*
official paperwork) and certainly not like "mordida" ("the bite", a
"polite" term for a bribe or graft) ... which still happens in some
situations, but never happened to me in ham situations ... my
impression is that "mordida," where it still exists, is most common
in matters relating to vehicle registrations and traffic tickets, as well
as local government business concessions ... their *federal* government
is *really* making an effort to eliminate the practice at all levels of
their society ... though, like Morse testing, old habits die hard ...

Carl said, among other things:

>>, for many, the
>> desire to displace Morse Code as an operating mode.

>That's a crock of shit Fred ... NONE of us have EVER suggested (and most
>of us have publicly come out against) any "ban" on the *use* of Morse in
>the ham bands ... we just want your damned fraternity hazing ritual
stopped.
>
>Carl - wa6vse
>wa6vse@fast.net

1) Carl, this is not the only place where the issue of the Morse Code is discussed, so what you know is mostly what you swear about. You quote me as using "ban". I suppose the meaning is the same, but I didn't say it. It is not MY hazing ritual. It has existed from Day One in ham radio, and many are now posting re how we are going to perpetuate the use of Morse Code after 1999 when they think code testing will no longer be required. It's a valid concern. It is why FISTS exists. A dislike for the mode is what drives most people to want the testing stopped. This may not include you, but it is the driving force behind most others, and they do not want to be inconvenienced, and that is the end of that. Too many Techs have told me they will NOT upgrade until the code test is removed. By Tech, I mean those who have not had to take a code test, not Tech Plus's who have done so. test because I personally don't want to have to answer that category of question?

2) With all due respect, Carl, wash your mouth out. People who talk the way you do get no respect, at least not from me. The fact that in another NG you apologize for not making clear you don't talk this way on the air is fine, but the words you choose to use in this venue speak volumes about you. Many of your posts are very "well-spoken". It seems that you lose control when someone makes you ANGRY.

Fred Adsit ------ NY2V ------ FISTS # 1293

From: wa2ise@netcom.com
Message-ID: <wa2iseEAxB0D.1nH@netcom.com>
Source record: 197200

Is there any real reason for having several license grades for ham radio? Seems that all you should need is a test to show that you at least read up and memorized answers to questions on how to operate a transmitter (like not transmitting on top of an ongoing QSO, identify RFI sources and solutions, like is it my transmitter, or a deficency at the neighbor's end?, Safety around high voltage and RF issues, and to show you have enough wits to not transmit out of bands). Those into radio theory (beyond the basic stuff) can homebrew, operators can chase their DX, packet people can do the satellites, etc. You learn what you want to, and skip what isn't interesting.

Is it more than some sort of snobbery (I can transmit on 14.313 and you codeless lowlifes cant!) :-)

73s Bob- Just a tech plus lowlife :-) :-) :-)

The manifesto of FISTS just posted here puts the lie to that
statement, since it plainly laid out the political agenda of FISTS.

>their own.

Bill, totally agree with that line of logic, but then the same could be said for the theory part of the advanced/extra class licensing. You should know the basic operating rules and regulation, but like the following: Why do I have the know what combination of battery and one resistor would it take to do the same job as a different battery and two resistors? Or why do I have to know the phase angle and value of the voltage in an RLC parallel circuit so I can use an extra 25Khz on 80 meter band??
Hey, I take it in stride and take the test, and learn the code because I have to, because I want to use amateur radio, although the testing aspects do leave me puzzled. It's a hobby, not a job, why make it so difficult??

It may be interesting to look at the Canadian system. There are two levels of licence. Basic lets you operate a type-accepted radio on the ham bands, while Advanced allows you to design and build your own transmitters. Advanced has a few other priviledges too - more power, being responsible for a repeater or club station.

There are also Morse Code qualifications needed for access to HF frequencies. 5 WPM gets you 160 and 80 metres only; 12 WPM gets you access to everything. I understand that the Morse tests involve both sending and receiving.

The Morse qualifications are orthogonal to the Basic/Advanced grading. You don't need any Morse at all to have Advanced. And you have access to all of HF with only Basic plus 12 WPM.

That's about it. Also, callsigns are mostly 6 characters in a fixed format. There *are* special 5-character callsigns for long-time Advanced holders, but they are relatively rare - I think most Advanced hams just have ordinary 6-character calls. So you can't tell the "status" of another ham by their call.

sentation ... >we don't have a multimillion dollar publishing empire to prop up the >corpse with ... :-)

Carl,

Do keep us all posted on the outcome and the membership stats. This will give us a clear indication of the percentage of people who support ARRL vs the percentage that support the viewpoints and methods you have offered. If you get to 10% of hams willing to support your organization, I will consider switching "sides" and join, too.

What would help me make up *my* mind is a description of the overal charter of the organization, the bylaws, a "business," an organization description (similar to ARRL's Divisions, Sections, Field Organization, HQ staff organization, etc. tho' significantly different, I am sure).

What specific lobbying plans do you intend? Spectrum preservation? Who are your organizational contacts? I would imagine that if you are actively soliciting memberships, you have done all of this preparation work, so do please share it with us.

I will buy you an unconditional lobster dinner if you get more than 10 checks that clear. :-)

73,
Ed Hare, W1RFI

I am planning a new national org but the dues will be lower than ARRL because we will not have a magazine. Access to info will be via the internet. Dues for basic memberships I think will be only one $. I am looking for a name right now for the new org. One potential name already submitted is the .... UNITED STATES AMATEUR RADIO ASSOCIATION.

There will be a board with at least 3 (minimum) sub boards: The License Board, the Band Board, and the Mode Board. Board members of each sub board will decide/recommend issues that affect their board and then refer the matter to the whole board for final action. So if an action comes up about licensing, the License Board will first consider the issue and make a recommendation to the full board who will then vote on the matter.

The ARRL is organized with a board representing certains parts/areas of the country with each director elected from hams in that area. With their system it is highly possible that every director is an Extra Class ham who likes CW. My system is organized along the lines of what we (hams) do and who we are.

The new License Board will have a director representing each license class: A Novice Director, Technician Director, Tech Plus Director, General Class Director, Advanced Class Director, and an Extra Class Director. Each director will be elected nationally with only hams in that license class voting for the director for their class. This board will work on issues related to licensing. Each director will have two deputy directors (those hams who came in second and third in the voting for director). In organizing this way no one license class is dominant over the rest of us. We are all in this together and together we need to work on our common problems.

The new Mode Board will have hams representing the various modes we use:
An ATV Director, CW Director, FM Director, AMTOR/PACTOR Director, Packet Director, SSB Director, SSTV Director, Spread Spectrum Director, Satelitte Director, etc. They will work on mode issues. In organizing this way no one mode (CW) will have a dominant position, but rather be balanced among all our modes. Any member ham can vote for any of these directors, but the person elected must be an active user of the mode they represent.

The new Band Board will have a director for each band: 2m Director, 6m Director, 10m Director, 20m Director, 75/80m Director, 160m Director, 1.2g Director, etc. In organizing this way it is hoped that the needs of all bands will be heard and acted upon in a positive manner without undue weight being given to HF vs VHF or UHF bands. Again any ham member may vote for any director here, but they must certify when they vote that they own equipment capable of operation in the band in question and that they have made at least (10) QSOs on that band within the last election cycle (4 years i think).

There may be a fourth Board representing members in the various call sign districts (0-9) we have and from Guam to Hawaii to Alaska to Georgia to Puerto Rico and the US Virgin islands.

I also propose that there be local CHAPTERS of the national organization where members can go to voice their opinions in person if so desired. These local chapters can run training classes for new hams. Classes for hams who wish to upgrade. Classes for hams who wish to get into a new area such as ATV, Packet, CW, etc. Only members may vote at the local chapter meetings. local Chapters can raise their dues as they see fit since they will have activities that require money.

Now if you want a new national organization like the above (to represent ALL hams), just help me build it.

-Carl - wa6vse
-wa6vse@fast.net

Actually it sounds more like you couldn't handle the American testing
structure so you went to a country that didn't have one. Is this
cheating or wimping out? But no, you'll say that you don't think
that the current testing structure is fair or necessary. Kind of
makes your position much easier from your standpoint. Trying to learn
about radio and do modern things, eh? Name me ONE "modern thing" that
can be done on HF and not on VHF. I can name many "modern things" that
can be done on VHF+ and not on HF -- Fast-Scan television, high speed
digital, spread-spectrum...the list goes on and on. The only reason the
"can't" be done on HF is because of the bandwidth required. How would
it be if someone would crank up their ATV transmitter on 20-meters? They'd
take out all of 20 and some of 30 or 15 meters. Or just think of what
would happen if someone fired up their 56Kbaud digital transmitter in the
middle of the 20-meter CW band. Not to mention the major problems with
both modes caused by selective fading. They'd take most of the CW band
with them. But you don't care, you don't like CW anyway. It sounds to
me like the attitude of the typical CBer that just wants to get on HF and
"shoot skip" without doing the work and getting the proper license to do so.

[soapbox]
Soapbox=ON

It also sounds a bit like sour grapes. You find that you are incapable of doing or unwilling to do the work (for some reason or excuse) so you insult and ridicule those who have done it, you call it "class bigotry" or "Extra Class snobbery." I don't know of any Extra or Advanced class licensees who aren't more than happy to help a fellow amateur operator advance through the ranks. I don't know of any Extra class operators who aren't happy to help someone learn the code and theory to become an Amateur Radio operator. BUT I do hear quite a few like you who ridicule those who have achieved the Advanced or Extra to those who are having trouble. You say that it isn't worth the work or you cut down CW or the theory to those who are struggling with it instead of helping them through it. You perpetuate the problem instead of solving it. If you don't like the code then so what, stay a Tech. But don't ruin it for those who would like something better. One thing that I have noticed is that those who cry racist or biggot the most and loudest are themselves the worst racists and biggots.

Soapbox=OFF

C L O S E D C I R C U I T A D V I S O R Y

The following is not for transmission over amateur radio. We have received word from our support fund administrator that the monies needed to pay the our monthly bills are again getting low.

Yes, there are many sources of ham radio news, but for the past twenty years, nobody has been able to bring you this news as quickly and as accurately as Newsline. The ham magazines have a two to four month lead time. The various ham radio newsletters are at least a week behind what's happening. Only Newsline brings up to the minute ham radio news direct to you over your favorite repeater. That means you can listen to it at home, in your car or even walking down the street on your hand held radio.

But doing this costs money. It takes almost $1200 a month to keep Newsline alive. Recognizing this the Newsline Support Fund was established several years ago. It's kept separate from Newsline and exists only to pay the week to week operating expenses of the news operation and to fund part of the annual presentation of Newslines' Young Ham of the Year Award. And, it again needs the support of all of you who want to see Newsline survive so that these weekly bulletins can continue to air.

The address for the Newsline Support Fund is:

Newsline
c/o Andy Jarema-N6TCQ
P.O.Box 660937
Arcadia, California
91066

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1032 for release on May 23rd 1997 to follow.

(*****

The following is a QST

Another satellite challenge to the UHF ham bands and some big surprises at the Dayton Hamvention on Newsline report number 1032 coming your way right now!

(*****

NEW SATELLITE CHALLENGE

The Little LEOs are not the only new service searching for spectrum in the ham bands. One newcomer is the Earth Exploration Satellite Service or EESS that uses synthetic aperture radar for a system of space borne sensors designed to collect information about environmental issues and other similar data.

A variety of frequencies is being sought by the EESS service. And while its not yet clear, this may include the 430 MHZ to 440 MHZ ham radio allocation. This is because the amateur and amateur satellite service status in this band is somewhat complex. Allocations vary by I.T.U. Region and even by individual country making a successful spectrum reallocation attack easier than on other ham bands.

So far, studies of sharing possibilities between the amateur and new service has not shown them to be compatible because of the interference level experienced when the two classes of stations are within line of sight.

There is also a type of EESS which would make use of 1215 to 1300 MHZ which is of concern to amateurs. Studies here show compatibility with some types of services but still represent a potential source of interference to amateur operations.

ITU CONFERENCE WRAP UP

The International Telecommunications Union Conference Preparatory Meeting for WRC 97 has concluded two weeks of deliberations in Geneva, Switzerland. The gathering has resulted in the preparation of a large book of combined technical output from the various I.T.U. study groups as well as the concerns of the member states.

Issues of special interest to radio amateurs included the possibility of additional frequency allocations to the Mobile Satellite Service operating below 1 GHz.

No specific frequencies have been identified in the report for reallocation, although the report does address a number of sharing possibilities, it makes no mention of sharing with the Amateur Service. In addition, a new concept of broad allocations was introduced. If adopted, this idea would result in individual nations being able to identify and allocate frequencies from a broad pool of service allocations. This

concept, being quite new and unstudied, only resulted in a call for future studies by the I.T.U..

Of course, the work of WRC 97 will be guided by specific proposals submitted by individual nations. At present, countries have not yet finalized nor submitted their proposals. Until they do, the amateur community will not be able to accurately assess the threats to our bands for this conference.

PENNSYLVANIA HAM MONTH

Pennsylvania is now going to celebrate ham radio. Earl Foster, W3BKF reports that by a unanimous vote, the General Assembly in Pennsylvania has declared the month of June 1997 as Amateur Radio Awareness Month. The resolution, approved April 15th, cites the contributions of ham radio, including its significant services to the citizens of the Commonwealth of Pennsylvania during natural disasters.

(Via E-Mail)

(*****

HAMVENTION '97

The 1997 Dayton Hamvention is history. While it failed to set any new attendance record there were many surprises. One of them caught everybody off guard as we hear in this report.

The 46 year tradition of the greatest spectacle in amateur radio is about to change. The Dayton Hamvention, independently sponsored since its inception by the Dayton Amateur Radio Association is now an ARRL sanctioned hamfest.

And if that was not big enough news, the Dayton Hamvention will be the site of the ARRL National Convention in the year 2000. ARRL President Rod Stafford, KB6ZV made the announcement at a press conference held on Friday, May 16th as the doors opened for this years Hamvention.

"It is my distinct pleasure this morning as President of the American Radio Relay League to announce that in the year 2000, the American Radio

Relay League and the DARA Hamvention will be jointly sponsoring the 2000 convention of the American Radio Relay Leagues National Convention." KB6ZV

Hamvention Chairman Dick Miller, N8CBU explained that Hamvention wanted to show solidarity.

"This is a one shot deal as far as the ARRL Convention is concerned, for the year 2000. In the spirit of solidarity and cooperation we did apply for to be an ARRL approved hamfest. It has taken place. For one year, too. If things go well, I don't see why they wouldn't. We'll probably continue to apply for ARRL approved hamfest." N87CBU

ARRL Executive Vice President David Sumner, K1ZZ a long time attendee of the Hamvention feels that Dayton is a natural site for the ARRL National Convention.

"I think it is great. I've been coming to Dayton since 1969 when I was in college up in Michigan. Back in those days it was a one day event, but it was, even then, one of the biggest things going on in amateur radio nationwide. And to see the Hamvention grow from then until now and to look forward to the ARRL Nationals I think is just a terrific thing for both organizations." K1ZZ

Dayton Amateur Radio Association President Michelle Ervin, KA9FUL feels that this unparalleled marriage of the two organizations will do nothing but help each other.

"I think it is going to be a good example for DARA illustrating what cooperation and team effort can accomplish. I think this is defiantly a mutually beneficial relationship for both the ARRL and Dayton Hamvention as well as DARA. I think this is a win - win situation. And I think it just shows once again that ham radio operators can work as a team and do an outstanding job because of that." KA9FUL

So after 46 years, the Dayton Hamvention is now an ARRL sanctioned hamfest. Will the marriage last? only time will tell.

Now for a wrap-up of the Dayton Hamvention.

From the stand point of the attendees, 27,000 of them, the weekend of Hamvention '97 was its usual look at this, buy that, try for a better deal than the other.

It would be unusual now an then, like the van out of Tennessee with a monster array for VHF-UHF. A 28 foot air mast with 5 elements on 6, 11 elements on 2, 11 elements on 220, 22 elements on 432, 33 on 1296 and a tow truck on the front bumper.

Seemed like the engine decided to eat itself for lunch in central Kentucky. And the boys wanted to make Dayton real bad.

"We called AAA. We specified we needed a tow TRUCK. Not a flat bed. We are too tall. Well, the flat bed showed up about a half hour later. He realized, oops. And the tow truck showed up about 20 minutes after that.

Then Gene, the nice guy out of Carrollton, Kentucky towed us up here. All the way to Dayton. Parked it in a fleamarket space, 115 miles. Thank heaven for AAA Plus."

Then there was Sunday morning, when a passing swarm of bees decided to use the last row of the fleamarket for a pit stop. Eventually, the bees were escorted to the golf course. Three golf carts full of guards clearing the way. Three golf carts full of guards bringing up the rear. And a box containing the queen bee carried by a brave individual walking ever so gently.

Finally one ham solved the perennial parking problem at Hamvention in a most unique way. Jim Simpson, WB8QZZ told the story to the crowd during the prize drawing.

"Every year we have someone come in with a unique way of finding a close parking place. We found out about this today. A fellow dropped off his car yesterday morning over across the street at the Chrysler dealership and said change the oil, I will be back tonight to pick it up.

We didn't know if we should tell that or not. Because we figured next year they are going to have a line of about 6000 cars to get the oil changed. But I figured, that was their problem." WB8QZZ

Reporting from a comfortable chair while I soak my soar feet, and wondering how much one of those 15 minute oil change franchises go for.

While it will be a few weeks before an official gate count is available, Charlie Cotterman says that the preliminary figure of 27,120 was announced during the closing moments of Hamvention '97. This is down about 2000 or so from last year. That's about a 2% drop and is consistent with the attendance downturn that conventions and hamfests have been reporting nationwide.

But even with fewer people jamming the convention floor nobody was complaining. Several dealers told Newsline that sales at Hamvention '97 were the best in the past five years. They hope that the trend will continue for years to come. More on Hamvention '97 in future Newsline reports.

(Via Newsline, Amateur News Weekly)

HAM RADIO AND MORE TIME CHANGE

Another frequency change for Len Winkler, KB7LPW's Ham Radio and More radio program, The show has returned to 5.070 MHZ for its live weekly shortwave broadcast on WWCR. The show airs Sundays at 6 PM Eastern Time. That's 22:00 UTC.

(Via KB7LPW)

(*****

NEW SBE CERTIFICATES

The Society Of Broadcast Engineers has announced two new certification programs for individuals. The new levels of proficiency are called Certified Engineer Audio and Certified Engineer Video. Both are designed for production and non-broadcast engineers who want to obtain SBE certification.

Testing for these new credentials will include the same level of technical questions found on the five year level of Television Broadcast Engineer and Radio Broadcast Engineer certification exams. Only questions dealing with high power RF, microwave, satellite and FCC transmission standards will be excluded.

(Via SBE)

(*****

HAM RADIO ROLE IN WB MOVIE

Ham radio equipment supplied by the ARRL will appear in the upcoming Warner Brothers' film, Contact. The League loaned the movie makers vintage publications and maps for use in the production.

Mike Gastaldo with the Warner Brothers Prop Department says the ham shack scenes happen in the first 15 minutes of the film. Gastaldo says hams can tell people to go for the ham radio scenes and stay for the astrophysics. Contact is scheduled to open July 11th.

(Via ARRL)

(*****

KA5UAC ON MIR

Ham-astronaut Mike Foale, KB5UAC, will be on the air from the Russian MIR space station. Foale blasted into space on the shuttle Atlantis on Thursday, May 15th for the STS-84 mission. He then swapped places with Astronaut Jerry Linenger, KB5HBR, aboard the Mir. He is scheduled to remain there until September and will try to operate as time permits.

(Via AMSAT-NA)

(*****

TECSAT II LAUNCH

And word that Israeli hams will attempt to launch a ham radio satellite later this year. Called Techsat 2, the bird will be lifted to orbit by a Russian launch vehicle. Techsat 1 was lost in a launch mishap about eighteen months ago.

(Via IARC)

(*****

NEW UK HANDICAPPED SOCIETY

From overseas, the United Kingdom's Visually Impaired Radio and Electronics Society has been established to facilitate the participation of visually impaired people in amateur radio and related hobbies. It also provides a lobby to persuade equipment manufacturers to make their products more usable by visually impaired customers. For further details please contact Robert Powell, G7TRT.

GB2RS BACK ON CW

And GB2RS news bulletins in the United Kingdom are again on CW. As of Sunday the 16th of March, an abbreviated version of the GB2RS news in Morse code was reinstated. It's transmitted each Sunday at 09:00, 12:00, 15:00 and 18:00 UTC on 3.518 MHZ. from the station of G4FKH in Chelmsford. It is made up of updated propagation news sent at between 12 and 15 words per minute.

CANADIAN HALL OF FAME INDUCTEES

The Canadian Amateur Radio Hall of Fame awards for 1996 have been announced. Frederick Oliver Hammond, VE3HC, was made a "Member of the R.A.C Hall of Fame" and Ernest Harold Savage, VE7FB, received the "Radio Amateurs Canada Award of Honor. Both recipients are well known to the Amateur Radio community.

Hammond is best known for The Hammond Museum of Radio in Guelph, Ontario. It features a collection of equipment and tubes depicting over eighty years of wireless and radio progress.

Ernie Savage, is considered a Canadian patriarch of the amateur radio community. This, in Western Canada where he served as Section Communications Manager and Section Manager for over 30 years.

DX

In DX, the planned 1997 Bouvet DXPEDITION has been delayed until December 1998. The Convention of the Conservation of Antarctic Marine Lining Resources is establishing an ecosystem monitoring program on the island. Because of this permission to land has been revoked until the management plan is in place.

The Institute's concern is that all activity will disturb the environment to some degree which might cause an unacceptable impact on the monitoring program. WA4JQS and ZS1FJ, are continuing their efforts for this and other operations.

Also, activity continues regularly from Vietnam where 3W5FM, can usually be found before 11:30 UTC on 40 meters around 7.005 MHZ. He concentrates on working Japan and east coast U.S. stations. After 14:00 UTC he goes to 30 meters to work the west coast U.S. stations on 10.101 MHz. Nor does he leave Europe out. He takes on that continent between 15:30 and 17:30 on 14.009 MHZ. QSL via UA0FM.

(Via various DX sources)

YHOTY '97

A reminder that the nominating period is now open for the 1997 Young Ham of the Year Award. In cooperation with Yaesu USA Corporation and CQ Magazine, we at Newsline present this award annually to a young ham who has contributed to his community or the nation using ham radio.

To qualify, a nominee must be 18 years of age or younger, be an FCC licensed radio amateur and reside in the continental United States. More information on the award and an official nominating form can be found on our web page at:

http://www.arnewsline.org

That's a new internet address. Then scroll down to Young Ham of the Year Award 97 and click on it with your mouse.

You can also get this information by mail by sending a self addressed stamped envelope to the:

1997 Young Ham of the Year Award

HAPPY ANNIVERSARY

Finally, scientists have marked the 100th anniversary of the discovery of the electron. According to Jim Fitton, W1FMR of Wired News, the announcement of the electrons discovery was made in an 1897 presentation before the British Royal Academy of Sciences. This, in a paper by physicist J.J. Thompson. In his presentation, Thompson described how he discovered that cathode rays are negatively charged particles which he dubbed electrons.

And the transistor turns 50 years old this year. What many designers, experimenters and hams call the three legged fuse was announced to the public by Bell Labs in December of 1947.

You seem to have two Mexican (XE..) powerhouses confused. XEROK,
Juarez 800kHz, 150 kW; and XERF Acuna (Del Rio) 1570 kHz, was 250 kW
now 50 kW. RF was where the Wolfman came to fame in the early 60s.

>requirements.

Pardon me, but unless you've actually dealt with the administrations of the countries involved, how do you know what the FCC, or its equivalents around the world favor? You may mean that most of the Amateur Radio Societies that are part of the IARU favor retention, but even that's a real guess on your part. I point out though that there is no reason for the FCC to end cw as a requirement merely because it isn't mandated by treaty. I however can see lots of reasons for nations to want radio amateurs and still not favor retention of the morse code requirement. You also ignore that given enough literal interpretation of the present treaty, having a card with "dots and dashes" on it and being able to decode one tenth of a word per hour using that card would already comply with the requirement. The present obligation sets no minimum speed. The FCC could already effectively end morse code as a requirement if it so chose, and there is little that any other country could do if the FCC used the method outlined above. After all, the U.S. would be complying with the treaty.

Mike ... even for us technically advanced folks, it's a bit hard to get
reliable
ISP service from a sailboat in the middle of the ocean or in some remote
bay on the Baja 60 km from the nearest paved road ... moving from place to
place and country to county like that makes it hard to stay connected ...
I was out of the country for several years, cruising on a 42' sailboat ...
Now THAT was "fashionable" ... Christmas in Zihuatanejo with Viking
Serenade and Seward, New Year's in Acapulco with the QE II and a
couple of others, crossing the Panama Canal, crusing the Carribean ...
2-1/2 years of vacation from the work-a-day world ... that's what us "geeks"
get for "telling someone to orient that piece of silicon like that" ...or some
other similarly technical thing ... you ought to try to learn some of that
technical stuff and "get with the program" Mike ... instead of just craming
the answers into your short term memory so you can pass a ham test and
become "a CBer with an attitude."

There's no fundamental difference between hams and CBers. There are a lot of good ones, and a few bad ones that make all the others look bad by association.

Put every ham in the world on 40 discrete frequencies on 10 meters, operating mostly AM with a smattering of SSB - no CW, no FM, etc, - and imagine what would happen. I submit that the resulting mess would make CB look tame by comparison.

I actually spend very little time each evening in usenet activities ...
BTW ... check the TIME of the message you assert came from
a USR machine ... also the date (since I was home on medical
leave a couple of times last year) ...

> The last I looked, portable satellite phones ran upwards of $3k, with a
> $3/min. phone charge. I doubt many hams will be buying them anytime soon...

I never said they would ... I said the EMS folks are using them in increasing
numbers and through the use of modern technology they have far less
need for or dependency on hams than before ... if we keep falling behind
and getting more backward as they advance, soon they won't need us at all
and when they tell the FCC that, we've got a big problem ...

> Yeah, so what? You don't look like someone who would lobby the ARRL or
> W5YI to support a requirement change anyway.

The ARRL is a total waste of time ... they DON'T listen ... I don't care if
you believed that "come back when you get your code speed up to 30 wpm"
response from the senile old bastard ARRL director from MO or not ... he

said it ... even the more outwardly "reasonble" sounding BOD members don't listen ...

Fred, on the other hand,appears to see the writing on the wall for ham radio and
be willing to accept, perhaps even encourage, progress ... I'm sure you'll flame
him for that, saying "he's just in it for the money" or something similarly sarcastic.

I'm getting tired of wasting time trying to fight an intellectual battle with a totally unarmed opponent, Mike ... I think I'll (at least attempt to) ignore you for a while ...

Well Greg, I drive from state to state a lot and very seldom hear anyone on the 146.520 calling freq. I monitor it all the time and call out about every 50 miles or so but seldom make a contact. Sometimes its a long way between repeaters. On the other hand the CB channel 19 is always active with weather, road, and bear conditions. Also those truckers can tell some very good stories. True, there is a lot of trash in there, but sometimes you can find a real jewel amid it all. Radio is Radio regardless of frequency.

I tried to read the "FISTS Declaration of Purpose" or whatever you guys
call it the other day ... I couldn't figure out whether to gag or wet my pants
laughing ... all that ridiculous crap about how "Morse is the essence of
ham radio" ... how "Morse is so important" ... etc. so retro, so stagnant.
So sickening ...

> > That's a crock of shit Fred ... NONE of us have EVER suggested (and most
> > of us have publicly come out against) any "ban" on the *use* of Morse in
> > the ham bands ... we just want your damned fraternity hazing ritual

> Well, you couldn't prove it by your blatant emnity towards the mention of
> the words morse code or cw, or the FISTS club.

I have publicly stated on MANY occasions that I support your right to
pound brass as long as you want to ... and would fight to oppose any
attempt to take that right away from you ... I can see NO reason to
ban the use of Morse, either now or in the forseeable future ... I even
offered to support a statutory prohibition of any such ban for as much
as 50 years (though I'd prefer to only sign up for 25, because it *is*
hard to predict conditions 50 years into the future in such a rapidly
changing world ...

All I ask is the same courtesy ... don't insist on stopping me and others
from doing the more technical, progressive side of ham radio just because
we don't personally care to be bothered with the beeping ritual ... hell, most
of those who insist on forcing everyone to learn the code and pass a test
ADMIT that they don't care if one ever *uses* it ... it's just a fraternity
hazing ritual ...

> But perhaps noone should
> judge you by your name calling. You seem unable to control that flaw.

> amateur bands. Sorry you feel that's such a threat to you...

Tell that to Ms. Kott or whatever her name is ... she certainly make the "club"
look VERY political (radical, retro, reactionary, that is ...)

Maybe FISTS wasn't intended to be that way, but the posturing lately
has certainly seemed to be a very "in your face, cram it down your throat"
approach to advocacy of continuation of the Morse hazing ritual, as opposed
to simply "Morse is fun, we encourage you to join in the fun ..."

> Ergo, the sweeping generality is false.

Give me a break, Hans ... you know damed well that "pro-coder"
used in this venue and context means essentially "someone who
(more or less rabidly) insists on the maintenance of the Morse
hazing ritual for access to the HF bands " ...

Where as "anti-coder" is a "pro-coder" misnomer for those
of us who oppose the maintenance of the Morse hazing ritual ...
it's a misnomer because we're not anti-Morse (the use of the
mode on a voluntary basis by its aficianados) only the forced
indoctrination and testing, which constitute the hazing ritual ...

Can you at least agree to agree with the terminology, rather
that just jousting for the sake of jousting over stupid minutae (sp?) ???

I'm looking for info on the software & cable for the IC-T7A. I
understand there is logic in the cable connector shell--any schematic
available for this? Can programming be done from a "dumb terminal"
package? Any help appreciated!

no, .42 amp should run for days on a GOOD battery. I'd suspect your
battery capacity is low (buy a new one) or check when radio is off is
there still a substantial current draw easiest way is to disconnect
your
battery, put a 2 ohm resistor in the line and measure voltage accross
the resistor then use ohms law. If there is, check why, i've seen glove
compartment and trunk lights, and even under the hood lights stay on.

small drain, but it hurts bad because they're aways on.

4225. WWW Message Board Experiment

WWW Message Board Experiment

Folks,

May I engage your services for an experiment...

As you know, I set up a "Personal Web Server" on my
home computer running Win95. Previously, the server
had only a copy of my web page...

But, now...

I have taken the mirror of my home page off and installed
an automated message/discussion group faility called aptly
"Short Circuits"...

Please go to my home page http://www.qsl.net/k7on and click
on the rotating arrow and while I'm connected you'll be then
connected to my personal server where you can access the messages
entered by you and others.

It is threaded and resembles a Usenet newsgroup, but will not
be spammed as it is not connected to the Internet by a static
IP address...(this is part of the experiment, BTW...)

Please give it a shot!

I'll be watching for messages on there and I've put 2 already myself.

73, Brian http://www.qsl.net/k7on

Auto batteries hate to be deep discharged. If during the alternator problem your battery got really flat a few times, or has gotten really flat few times since, your battery is probably shot.

Try charging the battery up fully (nice long road trip), and measure the voltage across the battery with a voltmeter as soon as you park it, engine off, headlights on. Then immediately disconnect one of the cables (losing all the presets on your car radio, but then you've been dealing with that all ready, I guess). Come back the next morning, reconnect the cable and before you start the engine again measure the battery voltage with the headlights on. I think you'll find the battery voltage much lower. The battery will have self discharged over night.

When battery discharges, its plates shed lead (which is later redeposited during charge). Sometimes when the battery is deeply discharged, the plates warp from their own weight, or some of the shed lead wedges across the bottom of alternate plates causing an internal short which discharges the battery when it is just sitting there.

Hope this helps

Gray

I feel that there's no such a thing as one "best way" for everyone,
because we're all different. Just remember, what seems to work for
you, is your best way.

I give you some general ideas (no pun intended) that seem to work for
others . . .

(1) NEVER count the dots and dashes. Try to learn the "beat", "musical",
or sound pattern of each letter. You want this to be more of a reaction
type of response without heavy thought.

(2) If possible, get a computer program to practise code. Code tapes are
good, but a computer can generate endless amounts of random characters.

(3) Set the character speed to 18 words per minute. If you can copy just
5 words per minute, set the character spacing to 5 words per minute. As
you get better at it, you'll increase the character spacing speed. With
this trick, the sound of the letters seems the same, but the spacing
between the letters is reduced.

(4) It's better to practice 3 times a day for 10 minutes than to try to
practice for 30 minutes non-stop.

(5) Remember to practice copying onto paper what you hear. Those who
fail to do this critical thing, are more likely to fail.

(6) Try to push yourself to copying a little higher that 13 words per
minute; say 15 words per minute. If you can do that, come test day,
the 13 words per minute will seem easier.

(7) Practice

(8) Practice

(9) Practice

(10) Don't give up.

Good luck,

Bob KF6JHG

P.S. I'm working on learning the code too.

That's why my address shown is only My Post office box. Anybody who's concerned about security issues should do this.

I don't give out my address on the air either. Too many lids with scanners listening, or whatever. Besides, most folks who look up a callsign want the address for one reason or another. IF you don't want 'em showing up at your front door, get a P.O. box.

I must agree 100% on this. I'm of the opinion that cw is no longer as relevant as it was at one time, but still has value for those who wish to use it. However, I get real tired of seeing every debate in writing in cyberspace turn into a code vs no code debate. On the fidonet, here on usenet, just about everywhere, the debate rages. It's a hot button issue, I understand, but if I'm understanding correctly, rec.radio.amateur.policy ng was created just for the purpose of such debates, so how about it guys, take the debate to policy, please?

Let's everybody keep this debate confined to that newsgroup please!

>friends, *especially in packet operation*?

I wouldn't be surprised if, after spending money to obtain or produce specialized hardware for connecting to their radio rigs, if there aren't more than a few hams out there who are still using their old Commodore-64 computers in connection with the hobby.

I know that even in offices, some firms have hesitated to make the conversion to the new software. Many utility programs, like antivirus programs, need to be replaced. There's a learning curve, a loss of control over one's machine - I've found out how to configure Windows 95 to allow booting up into the previous version of DOS, by changing a file named MSDOS.SYS (a text file, having the same name as a _binary_ file in DOS) but this option isn't properly documented.

I would therefore think that there are quite a few people still using Windows 3.1. However, it's the people with the most money to spend who have hastened to run out and buy Windows '95, and it's those same people, perhaps, who will have the most money to buy your product ... and developing an extra version involves additional expenses. (What about getting a copy of C Set++, and making an OS/2 version, someone will ask...)

Probably your best bet is to release the Windows 95 version when it's ready - and then, based on feedback, if enough interest is expressed by people who would like to see a Win 3.1 version, use some of the money raised by the Windows 95 version to support the additional development effort.

I have this vague memory of seeing an ad for some program development product - I don't know if it was Visual Basic, but it could have been - where the more expensive Professional version let you produce a program that would run under Windows 3.1, but the standard version, considerably less pricey, limited you to Windows '95.

As a retired auto mechanic [18 years] and now elect.engr., I find the fact that a 525CCA battery is being used in a '96 vehicle rather suspicious. As I look at a battery replacement guide, I see replacment batteries listed with ratings from 650 to 1100 CCA. I have personally put a 1000 CCA battery in my '79 Olds with a 455 cid engine that use the diesel starter left over from the orig. motor. Orig. setup was two [2] 525 CCA Delco Freedom batteries for the diesel setup. I would check the alt. output voltage [as another person suggested] with a digital meter.At 2000 rpm , the voltage with a charged battery and accessories off should be a minimum of 13.8 and a maximum of 14.8 volts. The alternator is probably rated at 80-94 amperes max. output. If you can put a shunt inline with the negative battery cable, you can get the real lowdown on where all your electrons are going. Seems to me, a trunk light draws about 200 ma. And I have left lights like that on for more than overnight with no low battery conditions. The best test, however, would be to put a shunt rated at 100-200 amps at the alternator output [hot lead] and see how many amps are being pumped back into the battery after you find the vehicle unable to start on its own. With a known goo battery found accidently run down, after jumo starting, the initial current out of the alternator will 55-70 amps, and the charging rate will taper off fairly quickly [5-7 min] to about 15-20 amps. then the rate will drop much more slowly as the battery approaches full charge. the output current must drop almost to zero or the battery probably has a bad cell, new battery or not. Cranking the motor for 30 seconds on a charged battery must display a minumum of 10.5 volts at the battery or their is something wrong.

Hope that helps....nothin' worse than bein' stuck when you gotta go

Assuming that's true, how, exactly, is discouraging those hams in favor of more "tech" types going to change that, exactly? Most tech types don't do a lot of operating, in my experience. Chase off all the appliance ops, and the bands go dead. Enter the FCC and the commercial folks to grab them. Without that "body count" you disparage daily, we have little or no chance to hold our increasingly valuable frequencies.

And I've had a personal phone call from Carol Fox Folack. So what? Name-dropping proves nothing.

> technical terms what we *should* be capable of and how far behind
> the commercial competitors we are as a group ...

So, other than continually bitching here on UseNet, what have you done to help the average ham to move toward your vision of how the bands should be used?

If they were that gung-ho to become hams and advance the state of the
art, they could and would get at least a 5wpm ticket, which is a trivial
matter to most people. Thousands of technically competent hams have
taken the time to pass 5, 13, and 20 wpm tests in the past. For most of
your alleged valuable new hams, CW is only a convenient excuse not to do
something they don't really WANT to do .

> FOR the idle, often retired, appliance operator (who has the time to waste)
> and AGAINST the technical folks whom we need ...

Unless you make the rules ridiculously restrictive, you'll always have
many more "appliance ops" than tech types. And the CW tests have little
or nothing to do with the increasing age of hams.

>
> I SAID "one of the VE's posted some statistics recently" ... why do you

A vacuous statement with no data whatsoever on which to do a search.

> question the truthfulness of that easily verified statement??? What's so

If it were so easily verified, you'd have done it by now, just so you
could rub my nose in it.

> outrageous about saying "one of the VE's posted some statistics recently" ???

Because it's meaningless without specifics and context.

> If you cared about something besides flaming me, you could easily FIND

As could you. It's your argument, it's up to you to back it up or back
down.

> the damned post and satisfy your (supposed) curiosity ... I didn't "invent"

I think you did. Feel free to demonstrate otherwise.

> anything about this ... I just told you factual information about where you
> could find some information ...

You told me nothing. No name, no callsign, no newsgroup, no date range,
no keywords worth a damn.

> I'm not embarrassed ... I told you where to find the post ...

> > Bullshit. What we'd have is a hobby even sicker than it is now, and
> > shrinking fast instead of *slowly* growing or holding its own.
>
> Interesting that that which you pro-coders all oppose (no-code) is the

Sigh. Are you terminally dense, or are you being deliberately obtuse?
I've mentioned several times already that I lean toward the modification
or elimination of CW testing, and yet you continue to lump me in with the
pro-code group. If you'd read for comprehension, rather than looking for
reasons to insult me, perhaps you wouldn't continue to embarrass yourself
like this.

> ONLY thing that reversed the downward spiral ... to deny that and assert

No, it isn't. Novice enhancement, rule relaxation, VE testing, ten year
licensing, and other factors all contributed.

> that more movement in the right direction would somehow make ham radio
> "sicker than it is now, and shrinking fast instead of *slowly* growing or
> holding its own" is absurd ... ham radio has been growing more rapidly than

I've never come close to saying anything like that, so why are you raving
to me about it?

> before BECAUSE of the no-code tech ... not simply "holding its own" ...
> the only thing that's only "holding its own" is the ARRL ... losing money
> and getting smaller and smaller percentages of new hams as members
> because it's so out of touch with them and reality ...

Once again you oversimplify a complex problem by blaming one of your

evidence for your claims, or even any logical arguments to support them.

These two letters, plus "A" and "N" are assigned to the US by
international agreement. The US has all of the K, N, and W
blocks of calls, but in the "A" series, we only have up to
"AL--". To my knowledge, only W and K have been used
for commercial broadcast stations.

Canadian stations (in addition to "C", also share part of the
"X" series with Mexico. In fact, the first scheduled broadcast in
North America was from station "XWA" (later "CFCF") in Montreal
on May 20, 1920.

Actually, the practice of "K" west/"W" east was not implemented
for some time after the start of commercial licensing.

Here are some calls of early (1920's) stations in order they were
first on the air.

What Carl is saying is that one of the problems with amateur radio
is that it has gathered a large number of operators who are dependent
on appliances because they have no idea how to operate without
equipment designed and built for them by a Japanese manufacturer.
That is not what amateur radio is intended to be, though it is descriptive
of another radio service, IE CB.

Note that there is nothing wrong with using commercial radios, as long
as they aren't treated as black boxes containing "magic" which the amateur
does not understand. Homebrewing is not required. There's nothing of great
value in being an electronics assembler. It isn't a very high skill occupation.
What is valuable is understanding how the equipment works, what its strengths
and limitations are, and how to best exploit its strengths while avoiding its
limitations.

>of their time to perform selfless acts such as passing MARS traffic
>for our men overseas.

Selfless *operators* spend time performing public service with REACT too.
Those operators also are ignorant of how their radio appliances work, just
as you profess to be. In fact, their service *demands* that they leave the
covers on their radios, and as you claim to do, send them to the manufacturer
for repair. It appears you belong in that other service since it fits your professed
vision more closely than amateur radio does.

>If you think that is "slithering" (more personal attacks, Carl?) then

>cut it. The powers-that-be and mass public can't support that vision,
>because its something out of a Revenge of The Nerds Part IIX movie.

I'm afraid you are deluded, or living in a time warp (it may be the latter
considering the slide rule comment). Amateur radio's traditional position
as an emergency and public service communications resource has been
rapidly declining. It has been supplanted by other communications assets
ranging from the ubiquitous cellphone to flyaway satellite packs. The amateur
role in emergency and public service communications is not completely gone,
but it is no longer *the* thing that amateurs can count on to justify occupation
of valuable spectrum. And the nature of the communications EMAs want from
amateurs has also changed from the traditional first responder role to one of
logistic support communications that require cooperative networking skills.

Fortunately, amateur radio has other purposes. It is supposed to serve as
a way to raise the technical literacy of a subset of the public. And it is supposed
to serve as a laboratory and testing ground for newer technologies. Both of these
things serve the public interest too, and they are increasingly becoming the
primary services amateur radio can offer. Unfortunately, we presently have too
many amateurs lacking the skills to participate in these areas.

It would be interesting to see an audit of this organization. I wonder if
they are incorporated as a 501C3. If they are, they have to publish an
audit of their operations. But if they are, they have to be very careful
about their political activities. Perhaps the IRS would be interested in
(as MD is fond of saying) "following the money" to see if FISTS is
obeying Federal law with their political activities.

Note, however, that $15 annual dues is not an excessive amount for
a legitimate organization publishing a newsletter. Printing and postage
are expensive these days.

>letters.

For those who haven't tried this exercise, it is *not* easy.
In fact, if you have difficulty in maintaining context in this
exercise, that may be an indicator that you'll have trouble
copying Morse in your head.

I know that for messages of more than a very few words I have
to *write down* what my partner is spelling out to me if I hope to
understand what is being conveyed. It's the same when I copy
Morse, if I don't write the letters down so I can go back and
read the message as a whole, I won't have a clue what has
been said.

If you don't have a handy partner, you can do this exercise another
way. Take a blank piece of card stock and cut a hole in it just big
enough to allow one letter at a time to show through. Now move
that over a written text message and try to understand it. It isn't
easy, and the slower you move it the harder it is. If you are used
to reading at over 1,000 WPM as I am, it may be virtually impossible.
I even have problems when people speak words normally if they
do so slowly, IE at VOA English as a second language rates.

I think one of the main problems people have with Morse is slowing
their minds down enough to follow it. We evolved to handle speech
at a rate of about 120-200 WPM, and most of us have been trained
throughout our lives to read at much higher rates. Slowing down the
mind to deal with 20 WPM, or 5 WPM, can be very very difficult for
many of us. Consider that at 5 WPM it would take over 20 minutes
to copy this paragraph. Do you think you'd still remember the first
sentence? I know I would have completely lost the context of the
paragraph by the time it was over.

As Carl says, that's because amateur radio has been "perverted" into
being a radio *user* service, like CB. In other words, amateur radio has
emphasized appliance operating skills and events rather than concentrating
on its core purposes. The only thing which uniquely separates amateur radio
from other radio services is that amateurs are encouraged to experiment
with radio technology. All other services are allowed only to *use* radios.

Note that there are only two CW exclusive sub-bands in US amateur
radio, and both are at VHF. That CW operators tend to operate in the
data sub-bands of HF is merely historical accident and isn't codified
in the regulations.

Vince, who rarely actually offers documentation, did post the verbatim statement of the head of the Private Radio Bureau of the FCC to Vic Clark (then ARRL President) which backs Carl's assertion. Vince tries to use the quote to back his assertion that no code is part of an FCC plot to eliminate amateur radio, but the statement stands on its own, and contradicts that assertion.

The PRB chief's statement was that since amateur radio wouldn't support no-code (this was in 1981), the FCC wouldn't support the retention of amateur spectrum in the future. (This is a slight paraphrase, look in Deja News for the verbatim quote.)

It is sadly true that what Carl says about MD *is* a fair description of many
of today's amateurs. That's something which needs to be addressed and not
just accepted as a given. However, your assertion that it is nearly impossible
to work on modern electronic equipment without high buck tools is totally false.
SMT is *easier* to service than the older thru-hole and tie point assembly methods.
The skills required are slightly different, but the tooling needed is simple and cheap.

Troubleshooting modern equipment is also often easier than in earlier days since
entire subsystems are contained in single chips. This means that you only have
to troubleshoot down to the subsystem level then replace the chip. You don't care
what particular part of the chip failed since you have to replace the whole thing
anyway, so you don't have to do "traditional" component level troubleshooting.

Building has become similarly easy. Design today can proceed directly on the
functional level without much concern for nit-picky details that often concerned
earlier discrete designs. And the variety and quality of parts available has never
been greater, nor pricing lower, than it is today.

Wow, that's profound, John, and truer than you know. Many subscribers to QST
are just that, subscribers to QST, and aren't really functional members of the ARRL.

A better gauge of real ARRL membership would be to look at the percentage of
QST subscribers who participate in the ARRL, either via availing themselves of
member services or through participating in the the field organization. The latter
number is rather shockingly low, and the former is also rather low as well as being
of a parasitic consumer nature not significantly different than for those who are
"members" of Kenwood or Yaesu by availing themselves of those organizations'
services.

You are falling into the common trap of thinking that the "service" the
ARS provides is merely that of public service *operating*. The service
the ARS provides is to the *public interest*, and that's broader than either
emergency communications or operating route control for a parade.

One valuable service the ARS provides is the self-training of a subset
of the public in communications technology. This serves the public
interest by raising the average technical literacy of the public, which
makes the body public more capable of rational exploitation of the
spectral resource, and more capable of watchdogging government
allocation and regulation of that resource.

People ignorant of communications technology can't intelligently determine
if the government is properly carrying out its duty to allocate the spectrum
to best public benefit. But a leavening of technically astute radio amateurs
in the population can bring the key issues to public attention, IE about 1 in
300 of the population is an amateur, and they know other members of the
public who they can inform by word of mouth. This serves the public interest
much better than self-serving pronouncements from commercial entities.

The public interest is also served by the ARS because it serves as
a testing ground for new communications technologies. It is in essence
the world's largest beta test organization for communication equipment
concepts, and it does so at its own expense. This benefits the public
interest too. Dr. Rohde says that modern military and commercial
receivers wouldn't be as robust as they are without the work done to
meet the demands of the ARS for receivers with a high intercept.
So the ARS was of service to the military and to the commercial
communications worlds in that regard.

The service aspect of amateur radio is far more than bringing up
911 on the autopatch. And most of it turns out to be *fun* for amateurs
as well.

The creative spark in most people is a fragile thing. It has to be nurtured and
encouraged or the spark can easily be quenched. It is the rare person who
will buck public approbation and ridicule in order to pursue a creative vision.
If we want to advance amateur radio, and our charter says we should, then
we want to nurture that creative impluse, not make every attempt to quench
it.

>> For techniques such as SS, even development at VHF is forbidden. It has

If you examine the comments on the TAPR SS STA, you'll find people from the ARRL,
from repeater coordination councils, and ill-informed people from the weak signal
community fighting against it. Their arguments all boil down to one thing, NIMBY.
In other words, they are playing the role of dog in the manger.

>What I don't think you realize is that the same people who you are in league
>with now (pun intended) will turn on you when you try to next promote your

I have no agenda to promote EE level theory exams. I do think that the exams
should not pander to a 4th grade level as they do today, but that's a far cry
from demanding EE level exams. The only people raising this strawman appear
to be those who have no earthly idea what would comprise an EE level exam.

>Interesting.

The fact that Morse testing is a symbol for the forces of reaction is *not*
Ok. That's a major part of the problem. Just as those who cling to the
pseudo-science of "magic" are deluding themselves and others, clinging
to the symbol of Morse testing deludes those who think it somehow makes
amateur radio safe for their luddite brand of activism.

Heh, growing from 1 member to 2, 2 to 4, 4 to 8, etc is 100% growth. Very small organizations can easily show high growth rates, but those rates aren't long sustainable. What percent of US amateurs does FISTS represent? What percentage of worldwide amateurs? Other claims seem to place FISTS size at less than 0.05% of world amateur population.

There's nothing wrong with being a small vocal orgainization, of course, but growth rates aren't a good indicator of strength at these population levels.

There is certainly a growing consensus that Morse testing no longer plays a legitimate role in government licensing, but the idea that there is a desire to formally displace Morse operation from the bands lacks any support. It is true that fewer than half of currently licensed amateurs have chosen to use Morse, but that's a voluntary personal decision on their part and shouldn't be twisted into a claim that they wish to eliminate the remaining Morse operation.

Neither the USA nor any other member of the ITU would enter into a
treaty which REQUIRED that anyone who passed a 5wpm code test (or
indeed even an 50wpm test) MUST be granted an HF transmitting
license. Keep on dreaming. But if you quit wasting time posting
rubbish and spent the time practicing, your wishes would come true.

OK, I'll stick my foot in it. I've tried not to get involved in this
debate. I have been a no code tech for 4 years. Not that I havnt
thought about upgradeing, I just havnt. I see "good" reason to maintain
the code requirement it does act as a filter. If I dont want to take
the time to learn the code I'm simply not going to use the HF spectrum.
Theres been enough things to do on VHF+ to keep me busy to this point.
The AMSATS, weak signel work, ETC... the day when I need to work HF
I'll learn the code. I dont consider myself technically dwarfed. Just
kinda lazy...L8r

Lots.

>Oooops, what's that? Speak up -- I didn't hear you? Did I hear you
>mumbling something about Japanese codeless licensees having power and
>contact distance restrictions which preclude them from operating "DX"?

Power restrictions, yes, distance restrictions, no. The Japanese code test free are allowed 10 watts. That's twice the amount normally considered QRP. Are you suggesting QRP stations can't work the world? My little 5 watt Argonaut seemed to do a pretty good job, even using SSB. As usual, digital modes perform much better, example my current setup which runs 10 *miliwatts* on HF. The 10 watt limitation is a handicap, but not a huge one if you are a smart operator and intelligently follow the MUF.

On 28 May 97 00:07:32 GMT, ny2v_fred@juno.COM (Frederick V. Adsit) wrote:

> FISTS DECLARATION OF PURPOSE AND POLICYWHEREAS, FISTS, the
>International Morse Preservation Society, noting with concern the general
>trend to ease Morse Code and theory exam requirements for Amateur Radio
>licensing during the past two decades;And WHEREAS, noting that easing of
>requirements indicates abandonment of the traditional mission of amateur
>radio as a technical hobby pursuant to the spirit and guidelines
>originally set forth in Part 97.1 of the Communications Act of 1934;

This is certainly an amusing conceit, IE that Morse has any relevance to
technical pursuits in the service. But MD and others will be dismayed to
learn that FISTS admits amateur radio is indeed intended as a technical
pursuit.

The FISTS members on this newsgroup who have been decrying the calls
for an emphasis on technical excellence among amateurs should take note
that their organization formally repudiates such a stance even if in practice
it isn't interested in technical excellence at all but merely the furtherance of
an archaic mechanization of modem function in wetware.

>And WHEREAS, noting that an apparent correlation exists between said easing
>of requirements, and loss of frequency allocation amounting to more than
>100 MHz (see Amateur Radio Spectrum Protection Act),

Any such correlation is not apparent to an unbiased observer. In fact the FCC
Private Radio Bureau chief told Vic Clark just the opposite in a statement
documented by Vince B, IE the PRB chief clearly stated that it was *because*
of amateur insistence on archaic Morse testing that the FCC would no longer
seek to protect amateur spectrum from other competitors for public spectrum.
That statement was repeated publicly at the FCC forum at Dayton that year.
The FCC has made it very clear that they don't consider Morse a technical
element of the service. And they have clearly implied that retention of Morse
testing does hinder the furtherance of the service's goals.

>And WHEREAS, FISTS,
>the International Morse Preservation Society, with a U.S. membership of
>350 (and an international membership of 1600):* Finds the present
>multiple-choice option for demonstrating Morse Codeproficiency to be at
>direct odds with preserving the Morse Code requirement for the Amateur
>Radio Service,* Considers the multiple-choice option inconsistent with
>the American Radio Relay League's unconditional support of the
>International Morse Code, as stated in minute 41 of the Board of
>Directors Meeting of January 1993 (QST, March 1993, p. 78), * Opposes
>continued easing of Morse Code requirements for the reasons that such
>easing of requirements is at direct odds with the unique nature, purpose,

>and scope of the Amateur Radio Service, and directly affects retention of
>frequency spectrum allocated to the Amateur Radio Service as summarized
>in petitions RM-8259 and RM-8260 previously filed before the Federal
>Communications Commission.

(Read these petitions, and the FCC replies, carefully before buying into FISTS claims about them.)

>THEREFORE, FISTS, the International Morse
>Preservation Society:* Encourages its membership who now serve as
>Volunteer Examiners to conduct, whenever possible, traditional Morse Code
>examinations in which one minute solid copy of plain-text is required for
>demonstrating Morse Code proficiency at a given speed,* Encourages all
>who are or might be in a position to affect the issue, now or in the
>future, to maintain Morse Code proficiency as an international standard
>for licensing in the Amateur Radio Service,* Urges the American Radio
>Relay League to support and pursue the restoring of the traditional
>one-minute solid copy standard as the fundamental standard for Morse Code
>testing for all classes of license in which there is a Morse Code
>requirement,* Requests the Federal Communications Commission to eliminate
>themultiple-choice option and to restore the traditional one-minute solid
>copy standard as the fundamental standard for Morse Code
>testing.

This appears to be the political agenda statement of FISTS (contrary to the non-political claim made by John Hughes). Since it is based on false beliefs and premises in regard to the technical goals of the service and in regard to spectrum retention, as clearly enunciated by the FCC PRB chief, I'd caution potential FISTS members to think carefully about what they are signing on to support.

>that field-day operators don't take time to chat with "real folks"?

You missed the point. All those folks you listed above are utilizing the band(s) on a daily basis. The EME fellow used the band until he got his worthless piece of paper, then abandoned the band. Traffic handlers, PBBS operators, and FD operators are engaging in service to the community and/or their fellow hams, while EME-ers are mostly just indulging their own desires. As I said, that is their right, but such behavior does not really help us to retain little-used bands like 220. For a fraction of what an EME station costs, one could put up a 220 repeater. Listed in the Repeater Directory, the machine would help show the FCC and commercial interests that there was interest in using that band.

How much time did you spend composing this message? How much time do
you spend reading UseNet each day? If you used that time to study
code, you'd be ready to take your 5wpm test in no time. Yeah, code is
outdated, a royal pain in the axx, and should probably be dropped from
the Amateur Radio requirements. But you CAN learn it. Go for it,
man. You won't be sorry.

Hope to see you signing in here with your new ham call sign in a month
or so.

A good battery should be in the range of 50 amp-hours. At .4 amps,
the battery should last about 100 hours. Where did you measure
the current? At the radio or at the battery? If you measured
it at the radio, check the current draw at the battery. If it
is significantly different, pull fuses to find what is drawing
power.

To see if it is your charging circuit or your battery,
you can measure the charging voltage and current, or you
can put the battery on a AC powered charger and see if
the battery goes dead again after a full charge from
an external charger.

Thomas Hamilton White (whitetho@ipass.net) wrote:
[snip]

: Below is an overview I put together a couple of months
: ago for a mailing list about U.S. call letter practices:

[snip]
: The result, on
: October 27, 1920, was that a new Westinghouse station in
: East Pittsburgh, Pennsylvania, KDKA, was sandwiched
: between the ships "Montgomery City" (KDJZ) and "Eastern
: Sword" (KDKB). The "KD-- for everyone" policy continued
: until April, 1921, when the original three-letter land
: station policy was reinstated. This meant that, in May,
: 1921, when the second Westinghouse broadcast station, WJZ
: in Newark, New Jersey (now WABC, New York City) was
: authorized, the original call policy had been restored.
[snip]

This is a great piece of research, and I am very grateful
for it.

I will contribute, however, the following:

In the early 30's the 50kW "New York City" stations
were

WEAF 660 kc/s NBC Blue Network
WJZ 760 kc/s NBC Red Network (transmitter at Bound Brook New Jersey, along
with W3XAL short wave)
WABC 860 kc/s CBS

To fulfill our commitment to clear frequencies for Canadian and
Mexican stations, late in the 30's most broadcast stations were
moved up one or more channels. As a result WABC went to 880 kc/s,
where the CBS station WCBS still resides. NBC were required at a
point to divest the Blue Network, which operated for a period as the
BNC (Blue Network Corp?) and then became ABC.

For some reason NBC chose to keep the WEAF station, even though it
had been the Blue Network, and it is now WNBC. WJZ came to be WABC.

I hope my ancient memory is correct on these points.

>I was thinking pretty much the same thing! Lets say I have 1 milliwatt
>on 2 meters. I feed that to a Ramsey LPA-1 and get 20 milliwatts. I
>then amp that to 2 or 3 watts. Is the harmonic as clean as the main
>signal? or will it be distorted?

The 5th harmonic isn't necessarily distorted. But it has 5 times the
deviation of the original signal, which is probably too much for the
repeater receiver to deal with without distortion (not to mention
clobbering nearby channels). Also, any error in transmit frequency
is magnified by a factor of 5, so your transmitter crystal needs to
be as good as the ones normally used in VHF service (10 PPM? 5 PPM?)
in order to be on channel.

The other thing is: what happened to the fundamental. If your
original transmitter is working halfway decent, the 5th harmonic should
be *way* down from the fundamental. Say it's 60 dB down. So for 1
milliwatt on 2 meters, you've got 1 kW on 10 meters. You've got to
route your transmitter through a frequency-selective filter that
routes the kW at 29 MHz to a dummy load that can handle 1 kW, while
routing the mW at 140 MHz to the VHF amp, while keeping the amount
of HF that leaks out the VHF port low enough to not bother the
VHF amp. Not an easy task, I imagine.

A far better way to do what you're talking about is a transverter.
The basic idea is you build a nice stable oscillator at about 117 MHz
or 173 MHz, mix it with your transmitter output to get the sum and
difference frequencies, bandpass filter the result to keep the product
that's around 146 MHz and suppress the other, and then feed that to your
power amplifier.

This ought to work a whole lot better. You're just shifting your signal
up in frequency, so modulation and frequency accuracy remain the same
as they were at 10 M, not multiplied by 5. And you're using the fundamental
out of your 10 M transmitter, not some almost-nonexistent 5th harmonic.

Dave

CONGRESS ACTS TO PROTECT VOLUNTEERS

We said it couldn't be done, and so naturally, Congress went and did it! In one of the more promising--not to mention surprising--developments so far in the 105th Congress, the Senate has passed S 544, and the House has passed a companion bill, HR 911, each described as "The Volunteer Protection Act of 1997." The Senate is expected to adopt the House version of the bill, HR 911, and send it along to the President for signature.

As a result, volunteers of nonprofit organizations and government entities will, in the words of the House Judiciary Committee report on the bill, "generally be relieved of liability for harm caused if . . . the volunteer was acting within the scope of the volunteer's responsibilities."

This will be good news to Volunteer Examiners, Official Observers, ARES and RACES volunteers and others working under the sponsorship of a qualifying non-profit organization, all of whom appear to be covered by HR 911. In non-legalese, this means that you aren't as likely to be sued as a result of harm unintentionally caused to someone else, if your actions were part of

your responsibilities as a volunteer working on behalf of a government agency or a non-profit organization.

However, until the bill is signed by the President and its various loopholes pass the scrutiny of the legal community, volunteers shouldn't assume they'll automatically be covered. It appears, for example, that radio amateurs who are not working under the sponsorship of a qualifying organization and who volunteer to provide communications during a marathon, bicycle race or other public service or public safety event might not be covered. The same exclusion might apply to frequency coordinators and certain others who--though they are volunteers--aren't participating on behalf of a non-profit entity. While these individuals could affiliate with government or non-profit entities to do their volunteer jobs, the law will clearly protect only those who are "volunteers of a non-profit organization or government entity." The definition is clear with respect to government entities, but it is less clear with respect to "non-profit organizations." These can be Section 501(c)(3) entities, that is, an organization holding a certain tax exemption from the IRS. They also include, however, those organizations which may not be tax-exempt, but which are organized and conducted for public benefit and operated primarily for charitable, civic, educational, religious, welfare, or health purposes.

The growing reluctance of private citizens to volunteer for fear of lawsuits triggered interest in this legislation. While some states have enacted volunteer protection statutes, the inconsistency among states has resulted in what the Judiciary Committee calls a "hodgepodge." As a result, the League has promoted liability legislation in Congress for several years, initially to protect VEs and Amateur Auxiliary members.

The new legislation requires that the volunteer be licensed, certified or authorized, "if appropriate or required" by state or local authorities. It does not provide protection where the harm was caused by willful or criminal misconduct, gross negligence, reckless misconduct, or conscious, flagrant indifference to rights or safety of the individual(s) harmed by the volunteer. The House version of the legislation would not cover any volunteer who inadvertently caused harm to another person while operating a motor vehicle that requires an operator license or insurance. Also, certain limitations in existing state volunteer liability laws are not preempted by the Federal protection under the bill.

ARRL*s General Counsel Chris Imlay, W3KD, is studying copies of the House and Senate bills to determine the impact on Amateur Radio volunteers of the new legislation.--Steve Mansfield, N1MZA

FCC CHAIRMAN RESIGNS: PRESIDENT ANNOUNCES FCC NOMINATIONS

At a press conference May 27, FCC Chairman Reed Hundt announced that he is resigning from the FCC. He will stay a while longer but did not commit to staying until a successor is named. Hundt did not elaborate on his future plans.

Meanwhile, President Clinton has nominated Democrat William Kennard and Republican Harold Furchtgott-Roth to fill vacancies on the five-member Commission. Kennard is now the FCC's general counsel. Furchtgott-Roth--Senate Majority Leader Trent Lott's pick for the Republican FCC slot--is now chief economist for the House Commerce Committee. Both men are 40.

NORTH DAKOTA-MINNESOTA FLOODS: "MOST HAMS HAVE GONE HOME"

As the flood waters in North Dakota and Minnesota continue to recede, the slow process of recovery and rebuilding has gotten underway. While some hams remain active in the recovery effort, Minnesota Section Manager Randy "Max" Wendel, N0FKU, reports that "most hams have gone home," if they still had one to go back to. "It is a tiring and emotional time," he said, as flood victims face a sometimes uncertain future.

Many people still stand in food lines provided by the Salvation Army, and occasional radio communication is being conducted for the Salvation Army (SATERN units). "It was quite an experience," Wendel said. "We have learned a lot from what has happened, and will now take that knowledge and apply it for a better future on behalf of amateur radio and ARES in Minnesota."

Wendel said there are tentative plans to hold a joint meeting with various Amateur Radio-related groups to discuss "lessons learned" and how to provide the best service in future disasters. The Association of Minnesota Emergency Managers (AMEM) annual conference this September will feature a presentation on the flooding and the role of Amateur Radio, and Minnesota SEC Gary Peterson, N0ZOD, and Wendel, plan to attend.

"A lot of hams were involved all along the North Dakota-Minnesota border--which is defined by the Red River--and we may never know who they all are, but I hope that they all feel they played an important role on behalf of Amateur Radio public service." Wendel said. "I certainly hope that those hams who were involved can take pride in what they have done to help."

MIKE FOALE, KB5UAC, ABOARD AND ACTIVE FROM MIR

Ham-astronaut Mike Foale, KB5UAC, who swapped places with Jerry Linenger, KC5HBR, aboard the Russian Mir space station in mid-May, already is making good on his promise to keep Mir active on the ham bands. Foale is scheduled to spend more than four months on the space station before returning to Earth in September.

Al Lark, KD4SFF, of Greenville, South Carolina, was among the first US stations to snag a QSO with Foale (who was using R0MIR at the time). KD4SFF talked to Foale on Memorial Day and got a chance to try out a few Russian phrases during the QSO. The Mir frequencies are 145.800 MHz (downlink) and 145.200 MHz (uplink).

Foale has FCC permission to speak with unlicensed third parties via ham radio during his stay on Mir. Foale also has permission to use the German Space Amateur Funk EXperiment (SAFEX) equipment on Mir in addition to the 2-meter gear.

An earlier Mir occupant, astronaut John Blaha, KC5TZQ, said in a National Public Radio interview on May 21 that "99% of the systems aboard Mir are working properly," and that internal coolant-loop leaks are the main concern. Right now, the NPR report concluded, Mir "appears to be in better shape than it has in months."

Dave Larsen, N6CO, is the US Mir QSL manager for contacts made with Mir crew members. QSL cards must include date, time, and mode of contact. He does not handle cards for SWL reports. To confirm contacts with the Mir packet radio personal message system (PMS), include the message number issued by the PMS on your QSL. Send QSLs along with a business-size, self-addressed, stamped envelope to: David G. Larsen, N6CO, Box 1501, Pine Grove, CA 95665 USA. For further details, get in touch with Larsen via e-mail at doc@volcano.net.

ARRL FOUNDATION SCHOLARSHIP WINNERS

The ARRL Foundation Scholarship Committee has announced the recipients of its 1997 academic scholarship awards. Congratulations to this year's scholarship winners:

* Christopher D. Geisel, AA2EH, Clifton Park, New York: The ARRL Scholarship to Honor Barry Goldwater ($5000)

* Nathen W. Barton, KG7WH, Chewelah, Washington: The Mary Lou Brown Scholarship ($2500)

* Nancy A. Leonard, KB0SDS, Wamego, Kansas: The Paul and Helen L. Grauer Scholarship ($1000)

* Daniel S. Zimmerman, N3UMH, Erie, Pennsylvania: The Perry F. Hadlock Memorial Scholarship (1) ($1000)

* Madelyn A. Baker, WI2I, North Bangor, New York: The Perry F. Hadlock Memorial Scholarship (2) ($1000)

* James S. Sikorsky Jr, N3PHB, Wapwallopen, Pennsylvania: The You've Got A Friend In Pennsylvania Scholarship ($1000)

* Mary B. Furr, KF4LKB, Chapel Hill, North Carolina: The L. Phil and Alice J. Wicker Scholarship ($1000)

* Rachel S. Kalmar, KD6DKL, La Mesa, California: The Charles N. Fisher Memorial Scholarship ($1000)

* William D. Parton, KB8OID, Charlevoix, Michigan: The K2TEO Martin J. Green Sr. Memorial Scholarship ($1000)

* David D. Handlos, KB0KQY, Milford, Kansas: The Irving W. Cook , WA0CGS Scholarship ($1000)

* Richard S. Garrett, AA0CR, Florissant, Missouri: The PHD Scholarship ($1000)

* James W. Gregory, AD4GN, Atlanta, Georgia: The F. Charles Ruling, N6FR Memorial Scholarship ($1000)

* David V. Hatcher, KB4SRQ, Jackson Gap, Alabama: The Charles Clarke Cordle Memorial Scholarship ($1000)

* Daniel A. Quist, KC5KGB, El Paso, Texas: The North Texas Section-Bob Nelson, KB5BNU, Memorial Scholarship ($750)

* Clayton M. Nall, AA9RB, Sheboygan Falls, Wisconsin: The Edmond A. Metzger Scholarship ($500)

* Gerard Daubar, KS4KK, Palm Harbor, Florida: The NEMAL Electronics Scholarship ($500)

* Grant H. Chapline, KC5QHB, George West, Texas: The Tom and Judith Comstock Scholarship ($500)

* Ian J. Carisi, AA2XR, Glen Cove, New York: The Dr. James L. Lawson Memorial Scholarship ($500

* Nicholas W. Bass, KC5OXI, Heidelberg, Mississippi: The Mississippi Scholarship ($500)

* Steven D. Hicks, AB5ZW, Hernando, Mississippi: The Fred R. McDaniel Memorial Scholarship ($500)

* David B. Bukowski, N9KPD, Oak Forest, Illinois: The Six Meter Club of Chicago Scholarship ($500)

* Adam G. King, N9JRC, Eau Claire, Wisconsin: The Chicago FM Club Scholarship ($500)

* Jess C. Mikeal, N9KBC, Carmel, Indiana: The Michael J. Flosi Memorial Scholarship ($500)

* The New England FEMARA Scholarships ($600 each): Jonathan L. Martell, KA1VOB, Sanford, Maine; Thomas E. Burt, N1TB, Bourne, Massachusetts; Stephennie D. Lewis, WQ2I, Quincy, Massachusetts; Nicholas A. Goad, N1OOX, Randolph, Vermont; Swami Kumaresan, KD1QV, Wakefield, Rhode Island; Laura I. Irwin, KA1TMJ, Cromwell, Connecticut; Lisa M. Nelson, N1JOF, Wilbraham, Massachusetts.

* The General Fund Scholarships ($1000 each): Sean H. Breheny, KA3YXM, Scranton, Pennsylvania; Shaun C. Gartenburg, KB2JNW, Staten Island, New York; Angie M. Nehs, AA8YJ, Traverse City, Michigan; Jonathan D. Rose, AC4SR, Murray, Kentucky; Griffith T. Davies, KC7NWC, Myrtle Creek, Oregon; Nicholas J. Emerson, KB7OBA, Tucson, Arizona; Michael J. Falk, AA9RK, West Allis, Wisconsin.

To apply for 1998 scholarships, send a self-addressed business-size envelope with two first-class stamps affixed to: The ARRL Foundation Inc, 225 Main St, Newington, CT 06111. The deadline for applications and transcripts is February 1, 1998.

SOLAR ACTIVITY DECLINES

Solar seer Tad Cook, K7VVV (ex-KT7H), in Seattle, Washington, reports: Solar activity declined slightly from the recent peak, which was centered around

May 21. Propagation has been very good, with worldwide openings on 20 meters into the late evening here on the West coast. Last week the solar flux was above the 90 day average of 74 on every day. A new region of sunspots appeared on May 23 and again on May 27. In the previous week one new region appeared on May 16, two on May 17, two on May 19, and one on May 21. At last conditions seem to be pulling out of the doldrums.

Geomagnetic conditions were upset on May 27 when the planetary A index was 21. The planetary K index jumped to a very high value of 6 at 0300 UTC, indicating a severe disturbance, but it then dropped back to 2 by 0900 UTC, a very stable, quiet value.

Based on recent conditions, the next solar rotation is expected to produce a decline in solar flux to the low 70s until June 11, when the flux should rise back toward 80. Of course this assumes no new activity, and new activity from the new solar cycle is what we hope for.

W4VOS wrote regarding the recent lack of activity. He mentioned the news item from a January report which talked about an American Astronomical Society meeting in Toronto where scientists from Yale and NASA said that this next solar cycle should show a decrease in overall activity compared to previous cycles. W4VOS noted that after the last solar minimum in 1986, activity jumped right back, and there was no question that the new cycle was on a roll. This time there is a much longer period of low activity between cycles.

Currently there is wide disagreement between experts on when higher activity will resume, and by how much. As an example, NOAA and the National Geophysical Data Center's estimates for the sunspot count for June vary by four to one.

20 meters remains the best band for worldwide propagation during daylight hours.

Sunspot numbers for May 8 through 14 were 23, 14, 23, 26, 12, 15 and 17 with a mean of 18.6. The 10.7-cm flux was 71.9, 71.6, 72, 72.3, 72.2, 73.8 and 73.5, with a mean of 72.5, and estimated planetary A indices were 5, 6, 5, 7, 3, 3, and 6, with a mean of 5.

Sunspot numbers for May 15 through 21 were 15, 27, 47, 32, 51, 57 and 79 with a mean of 44. The 10.7-cm flux was 73, 72.2, 72.8, 74.1, 74.2, 79.1 and 84.8, with a mean of 75.7, and estimated planetary A indices were 53, 12, 12, 6, 4, 6, and 5, with a mean of 14.

Sunspot numbers for May 22 through 28 were 66, 58, 52, 50, 38, 43 and 25 with a mean of 47.4. The 10.7-cm flux was 81, 76.2, 76.9, 78, 80, 78.3 and 77.4, with a mean of 78.3, and estimated planetary A indices were 4, 3, 6, 5, 8, 21, and 6, with a mean of 7.6.

STEVE S. NURKIEWICZ, N2DAN, SK

Morse code key crafter Steve S. Nurkiewicz, N2DAN, of Port Charlotte, Florida, died May 21, 1997. He was 70. Nurkiewicz was known by CW ops for

his hand-made Mercury paddles, which featured a round, all-chrome design. His wife survives.--Bob Hirsch, W3CW

IN BRIEF:

* Correction: In the story "League to Comment on Theft-Deterrent System Maker's Petition" in The ARRL Letter, Vol 16, No 21, a special character did not "translate" to ASCII text. As a result, what should have read "uV" (for microvolts) was rendered as "(V" throughout the report. We apologize for any confusion.--Rick Lindquist, N1RL

* QST Cover Plaque winners: Congratulations to these winners of the QST Cover Plaque. Rod Kreuter, WA3ENK, for "Junk-Box Converters for 6 and 2 Meters," January; Donald Cox, AA3EK, for "See the Signals You Hear," February; Andrew A. Flower, W0ZUX, for "Tales of Power-Line Noise," March; Dave Benson, NN1G, for "A Single-Board QRP SSB Transceiver for 20 or 75 Meters," April; Eileen Lau, KE6VWU; Kai-Wai Chiu, KF6GHS; Jeff Qin, KF6GHY; John F Davis, KF6EDB; Kent Potter, KC6OKH; and David Rutledge, KN6EK, for "High Efficiency Class-E Power Amplifiers"--Part 1, May.

* New York Amateur Radio Month: Governor George Pataki, ex-K2ZCZ, has officially proclaimed June 1997 as "Amateur Radio Month." The proclamation recognized the Empire State's more than 38,000 hams and calls on New Yorkers to pay tribute to the state's Amateur Radio operators for their contributions to public service and emergency communication, education, technical achievement, and international good will "through contacts with foreign stations and cosmonauts on the Mir space station." Pataki's proclamation says that hams "are on alert for any emergency, local or world-wide, and practice their communications skills during the American Radio Relay League's Field Day exercise, which this year will take place the weekend of June 28-29, 1997."--The Hudson Loop

* Pennsylvania Amateur Radio Awareness Month: Pennsylvania plans to celebrate ham radio during June. Earl Foster, W3BKF, reports that the General Assembly in the Keystone State has declared June 1997 as Amateur Radio Awareness Month. The resolution cites the contributions of ham radio, including its significant services to the citizens of the Commonwealth of Pennsylvania during natural disasters.--thanks to Amateur Radio Newsline

* Vermont Amateur Radio Week: A proclamation declaring Vermont Amateur Radio Week is scheduled to be signed on Monday, June 23, 1997 at 4 PM at the Vermont State House in Montpelier. All clubs are urged to have their presidents and at least one member present. The celebration of Vermont Amateur Radio Week will conclude with the annual Field Day events in Vermont. For more information, contact Bernard Capron, N1NDN, Route 1, Box 2086A, Northfield, VT 05663--Justin C. Barton, WA1ITZ

* Vanity program provides incentive to upgrade: The experience of Dave Cushman, K0WG, of Shoreview, Minnesota, gives new meaning to the term "incentive licensing." Cushman, a ham since July 1995, was among the 456 hams who received vanity call signs on May 20. Cushman studied hard to pass

the Extra Class exam earlier this spring, and he said the opportunity to pick a vanity call sign was what made him do it. Cushman was KB0TDS for most of his short ham career, but he also operated briefly with a 2x2 call sign after he passed his Extra. Operators on the Pico Net had trouble keeping up as Cushman checked in using three different call signs in the space of one month.--John Warinsky, K9NJ

* DXCC status report: The DXCC desk reports it is currently mailing applications received May 7. There are seven applications received prior to that time. As of May 23, DXCC was processing work received on May 12, 1997. As of May 19, DXCC had processed 60 new applications or endorsements (4509 QSLs) and had 158 new applications or endorsements pending (21,376 QSLs).

* Polish special event station honors Papal visit: Special event station SN9JP will be on the air June 1 until June 15 to celebrate the visit of Pope John Paul II to Poland. Activity will be on CW , SSB and RTTY with operation on all HF bands and satellite. QSL via SP9PKZ or the bureau. For more information, contact Andrzej Lacheta, e-mail sp9max@free.polbox.pl.--Andrzej Lacheta, SP9MAX

* Shannon Lucid receives Russian medal: Astronaut Shannon Lucid received the Order of Friendship medal from Russian President Boris Yeltsin during a ceremony at the Kremlin honoring Russian Cosmonauts and international astronauts who have flown on the Russian space station Mir in 1996. The Order of Friendship medal is one of the highest Russian civilian awards and the highest award that can be presented to a non-citizen. Lucid spent a US record 188 days in space last year. She was launched to Mir on the space shuttle Atlantis on March 22, 1996, and returned to Earth on Atlantis on September 26, 1996. While on Mir, Lucid was active on Amateur Radio as R0MIR.--NASA

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, KB6ZV, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

How to Get The ARRL Letter:

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs.

* The HIRAM BBS: 860-594-0306.

* The ARRL Technical Information Server (Info Server): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

ARLB028 Congress acts to protect volunteers

ZCZC AG28
QST de W1AW
ARRL Bulletin 28 ARLB028
From ARRL Headquarters
Newington CT May 30, 1997
To all radio amateurs

SB QST ARL ARLB028
ARLB028 Congress acts to protect volunteers

The US House and Senate have passed companion bills aimed at shielding volunteers from lawsuits resulting from their activities as volunteers. The Senate has passed S 544, and the House has passed a companion bill, HR 911, each described as ''The Volunteer Protection Act of 1997.'' The Senate is expected to adopt the House version of the bill and send to President Clinton for signature.

As a result, volunteers of nonprofit organizations and government entities will, in the words of the House Judiciary Committee report on the bill, ''generally be relieved of liability for harm caused if . . . the volunteer was acting within the scope of the volunteer's responsibilities.''

This will be good news to Volunteer Examiners, Official Observers, ARES and RACES volunteers and others working under the sponsorship of a qualifying non-profit organization, all of whom appear to be covered by HR 911. The pending new law means that you aren't as likely to be sued as a result of harm unintentionally caused to someone else, if your actions were part of your responsibilities as a volunteer working on behalf of a government agency or a non-profit organization.

Amateurs and other volunteers are advised that until the bill is signed by the President and its various loopholes pass the scrutiny of the legal community, they should not assume they'll automatically be covered. It appears, for example, that ham volunteers not working under the sponsorship of a qualifying organization and who provide communication during a marathon, bicycle race or other public service or public safety event might not be covered. The same exclusion might apply to frequency coordinators and certain others who--though they are volunteers--aren't participating on behalf of a non-profit entity. The law will clearly protect only those who are ''volunteers

of a non-profit organization or government entity.'' The definition is less clear with respect to ''non-profit organizations.'' These can be Section 501(c)(3) entities, that is, an organization holding a certain tax exemption from the IRS. But, they also include those organizations which may not be tax-exempt, but which are organized and conducted for public benefit and operated primarily for charitable, civic, educational, religious, welfare, or health purposes.

The growing reluctance of private citizens to volunteer for fear of lawsuits triggered interest in this legislation. Some states have enacted volunteer protection statutes, but inconsistency among the various state laws prompted the League to promote liability legislation in Congress, initially to protect VEs and Amateur Auxiliary members.

The new legislation requires that the volunteer be licensed, certified or authorized, ''if appropriate or required'' by state or local authorities. It does not provide protection where the harm was caused by willful or criminal misconduct, gross negligence, reckless misconduct, or conscious, flagrant indifference to rights or safety of the individual(s) harmed by the volunteer. The House version of the legislation would not cover any volunteer who inadvertently caused harm to another person while operating a motor vehicle that requires an operator license or insurance. Also, certain limitations in existing state volunteer liability laws are not preempted by the Federal protection under the bill.

ARRL General Counsel Chris Imlay, W3KD, is studying copies of the House and Senate bills to determine the impact of the new legislation on Amateur Radio volunteers.

Gentlemen,

I would like to make the following observation re:spark gap transmitter saves the day.

You have all forgot the most effective method for the original poster to save himself (?).

(Remember his name on the original post)

WWWWWIIIIIIIIILLLLLLLLLLMMMMMMMMAAAAAAAAAA!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

4287. Crybaby no-coders

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-30 00:00:00 UTC
From: James O'Brien <kd4cdb@bellsouth.net>
Message-ID: <338EA089.3EB6@bellsouth.net>
Source record: 197040

If you people spent half as much time studying cw than you do crying on the newsgroups most of you would be Extra class by now. Be happy with whatever class you are. I was one of the early no-coders in Georgia when I got my ticket in 1991. I took alot of heat too. I passed my 5 wpm 60 days later. My wife passed her 5 wpm after studying 1 week. then I was a Tech+ for five years! I loved it,ten meters was open every day! When the band croaked at the sunspot minimum I worked like hell and finally got the 13 wpm. I did't cry about thr requirement. I cried alot about my inability to pass it! And the day I passed the the 13wpm I sold my brass straight key at the Prater's mill hamfest. Do I like cw? Hell no! Will I ever operate cw again? Probaly not. But I still respect the thousands of hams who cw and work it constantly. The bottom line is this:either pass the test or wait until the next millenium when they might drop the requirement. I feel very fortunate to have been originally liscensed as a no-coder,it is a rare thing and one should be glad for the opportunity. nuff said Jim KD4CDB

I need 2 items for my Icom Z1A

I need a belt clip for this radio. I recently bought this radio used, and the belt clip was missing. I use this radio when mountian bike riding and with out the belt clip, it's a pain.

Also - I need any dead nicad for this radio:

BP- 171, BP-172, BP-173 or BP-180

Or I can use the dry cell battry case BP-170

Is this stuff laying around your shack and you want to sell it?

Dave

My son and I are both working on our upgrade to General

We are looking for a good HF rig around $1,500 or less.

I'm asking for advice on Kenwood, Yaesu and Icom rigs in this range.

I'm drawn to the ICOM 706 Mark II because of it's 2 meter and 6 meter ability's. Would love to hear from any and all who like or don't like this rig.

Or if you considered this rig and went with another type instead, ie Yaesu or Kenwood - please let me know.

I don't want to waste a lot of $$ (who does) - so help me out folks - share some of that wisdom with me please!!!

Thanks

I've got a '96 S-10 Blazer with a 525 CCA (standard) battery. I had the alternator go bad on the vehicle back in January, and the dealer replaced it under warranty. Ever since, I've never been able to leave my mobile rig "on" overnight, without having to jump the vehicle to get it started in the morning.

I know plenty of other amateurs who leave their mobile rigs on 24-hours/day. I have it hooked to an external DC-powered speaker, which is switched with my ignition. So, the mobile can't even produce any audio through it's own speaker (which would draw a tiny bit more amperage).

I've checked the radio out. It's an Icom IC-2350H. On standby-receive is draws 0.42 amps. Is this outrageous? I know other amateurs in the area who leave their mobile rig on, their cell phones charging, and a spare HT charging 24-hours/day with NO problems.

I think it's the battery. The dealer I took it to charge me a whopping $91.00 to charge my battery up and tell me it was my aftermarket equipment that was killing my battery overnight. I kid you not. I could get home from my weekly 500 mile trip (which should do a great job of charging my battery), and the next morning -- click! The vehicle won't start.

The mechanic was telling me that the vehicle's battery is rated for a 20 ma (that's 0.020 amps!!!) draw, and anything over that is beyond it's rating. Excuse me, but I should be able to leave my vehicle sit for a MONTH with a tiny little draw like that -- and then when I go to start it, it should JUMP to life!!!

I'm just looking for a little information on what these batteries can handle. Currently, I have a "factory" 17ma draw for normal accessories like the clock, etc. So, if we add the draw from my mobile rig, we come up with a 0.437amp draw. HOW LONG SHOULD MY BATTERY LAST WITH THAT DRAW??

Any and ALL information will be greatly welcomed. Please email me with your responses, in addition to any posts to the newsgroups.

73 and thanks!

Do a search on the internet for j-pole antennas. I'm sure you'll find more articles on designing and building them than you can handle. I've been using a j-pole antenna made from 300 ohm twin-lead and it works great. It rolls up to a circle about 4 inches in diameter...and that includes the feed line. Is that small enough? It's supposed to have gain over a 1/4 wave and especially over a rubber duck antenna. I can tell you from experience that it is MUCH BETTER than the flexible antenna on your HT. I take it with me on business trips.

LAMBDA AMATEUR RADIO CLUB ANNOUNCES NEWLY REVISED WEB HOMEPAGE

==========

The Lambda Amateur Radio Club (LARC), a club for gay, lesbian, bisexual, and transgendered radio, electronics and computer enthusiasts and their friends, announces our newly revised world wide web homepage:

http://www.netaxs.com/~skeptic/larc

The LARC site features comprehensive information on the club, its history, goals, and future plans and activities.

The Lambda Amateur Radio Club (LARC)

LARC welcomes new members. There are no special requirements for membership other than an interest in radio, electronics or computers and a supportive attitude toward members of the sexual minority community.

LARC publishes a monthly newsletter, sponsors nets, sponsors an email reflector <larc@seta.fi>, sponsors a chat channel on Q Net <#larc>, sponsors local get-togethers at computerfests and hamfests, and organizes DXpeditions.

LARC is a public service oriented club which proudly affirms the sexual minority status of the majority of its members. LARC works publicly and visably for the benefit of all amateurs by promoting fairness, acceptance, and good will in ham radio especially on behalf of members of the sexual minority community.

FOR LARC MEMBERSHIP INFORMATION, visit our web site:

http://www.netaxs.com/~skeptic/larc

or send an E-Mail to:

larc@net-quest.com

To subscribe to LARC's moderated public electronic listserv:
larc@seta.fi

Send an E-Mail to: majordomo@seta.fi
Leave the "Subject" line of the message blank.
Message text: subscribe larc

>Carl R. Stevenson <wa6vse@fast.net> wrote in article
><01bc6066$6f7b1800$9895f5ce@wa6vse.fast.net>...
>
>-------------------SNIP the same old bull *&%$-----------------
>
>What NONE of you people have explained is why we have to drop the code test
>to adopt "new technology and modernize". I don't understand why you think
>that can't be done with the code test in place. You can't purchase and use

I think it might be a good time for me to jump in. A few of you may think that an SWL has no right to speak on this subject. I think this is far from the case. I (and a LOT of other SWLs / DXers) are also a part of the radio hobby. I will be the first to admit that a lot of SWLs are not at all technical, but a number of us are.

A number of SWL's (like myself, only as an example) know a significant amount of radio / electronics theory. I was looking into getting my ticket (like my father, WB8ETH, silent key) and getting onto the HF band, mostly to do QRP. I found out that the no-code ticket does not include the HF bands and I would have to learn the code.

I found myself putting a LOT of work into it. I found it to be a pain in the rear. I could learn the code if I had to, but I found myself at a crossroads- spend a lot of time learning the code or spend the time building radio, setting up antennas and other things related to my hobby.

It is true, I made the choice not to bother with learning code. I just felt that the effort to learn the code, so that I would use a mode of communication that Marcconi (sp?) himself used, was just not worth the time. I have a LOT better things to do with my "hobby time".

But, just I have made a choice, Amature radio has a choice to make. Amature radio has to compete for people's time, attention and money with other branched of the electronics hobby. This include a wide selection of things such as digital/computers, HF band reception (world band), scanners, etc. Or does Amature radio want to stay at a disadvantage, missing out on a lot of good people who could contribute greatly to the hobby.

As an SWL / DXer, I don't to see Amature radio die out, that is the LAST thing I ever wish to see. "Ham's" have done a lot to contribute to the development of radio and electronic overall, have certainly given a lot to my first love (world band radio/ clandestine station DX), but if you think that Amature will be able to gain new members and grow without a lot of the

young blood out here that will be able to keep it alive, then I feel that such a view is mistaken at best. This does not mean that I feel that people who hold this view are myopic, but the emphasis is being put in the wrong place. If you want to raise the line, then a place to start is the technical questions on the test.

If Amature radio does not start to grow here in America, then at some point in time there will not be enough of them to justify keeping the HF Amature bands open. I am not saying that the sky is falling, or that this will happen next week, but this will happen if Amature radio keeps shrinking. If it is required that the code be learned to be a "ham" then fewer and fewer people will join the ranks.

Dropping the code as a prerequisite to getting a ticket doesn't have to "drop the line" of Amature radio. The test, as good as it may or may not be , can always be made more technical and harder. Some have said to me that the code acts as a filter, keeping out the rif-raf. The problem that I see is that this "filter" is also sifting out a lot of good people too. Did the dropping of the code requirement turn 2 or 6 metres into a mess like CB ? If so, was it this way before the dropping of CW?

If Amature radio wants to grow, the choice is clear (in my eyes at least). If Amature radio wants to stay small, then I can try to understand that and must respect that.

>don't have on blinders and I'm very open minded. The fact that I have put
>up with your crap for so long is proof of that. OK, this is your shot!
>Explain it to me. How does the code test requirement prevent me or anyone
>from using the latest forms of communication technology if we choose to do
>so?

It does not keep an Amature from using the best gear, but I think it misses the point. Radio is not tubes, inductors, diodes. Radio is people. It does not keep out the best gear, but I feel that it repels some of the best people.

>This is an real question and I would like an real answer. Not just
>another worthless comment. Thanks in advance.

I feel that I have addressed this question in a real an concrete way. I will even guess that others have even said it much better than I ever could. I say what I say out of respect for Amature radio. I feel that anything but an honest answer to your question is nothing short of patronizing.

I wish Amature radio all of the very best. I hope that Ham radio stays alive. I hope that if Ham radio does not drop the code requirement that I am wrong. For all of our sakes

4303. Alternate WRC-99 proposal

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-30 00:00:00 UTC
From: sco@sco-inc.com
Message-ID: <338ee733.414617@news.mindspring.com>
Source record: 197056
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

In case New Zealand and Canada can not eliminate all code testing
requirements in the treaty I propose an alternate amendment to the
treaty:

"Any amateur radio operator who can demonstrate 5 wpm morse code
comprehension shall be granted access to ALL HF bands and allowed to
use any mode authorized for that band. Specific frequency asignments
within each band shall be determined by each country".

KE4IKT
Founder
U.S. Amateur Radio Assoc.

4304. Immediate Change to US Licensing Proposal

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-30 00:00:00 UTC
From: sco@sco-inc.com
Message-ID: <338ee846.689491@news.mindspring.com>
Source record: 197057
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

While I have posted ideas for a more comprehensive change to the US licensing structure, I have an idea for a simple change that would be easy to implement and would have vast potential for improvement.

Just eliminate the Tech Plus class of Ham and change the General code exam requirement from 13 wpm to 5 wpm. Would need to also stipulate that a Novice could upgrade either to Technician or to General (by taking the General written exam ... not needing to first take the Tech written exam).

The Tech Plus does NOT have any unique freqs that would need to be reassigned (they are shared with the Novice). By changing the General code speed exam requirement from 13 to 5 wpm that would give all Tech Plus hams an immediate way to upgrade, by just taking the General written exam. It would also provide an upgrade path for all the new no-code Tech class hams that would give them 'real' worth for their code learning efforts. As of now all 5 wpm really gives a ham is voice ability on the 10m Novice portion of the band [CW on 80,40, and 15m]. Can't even use 10m FM repeaters.

: U.S. Amateur Radio Assoc.

Hmmm...a fundamental understanding of the process seems to be important
if you are going to start an internationally recognized group. This
seems to be lacking here. Strike 1!

The ARRL does not speak at WRC-99. The representatives of the various
ITU member nations do. The U.S. will speak, Canada will speak etc. The
U.S. position will be influenced by the ARRL and other groups having
interests in the allocation of spectrum (think Little LEO). The trick
is to influence the U.S. government. Until your group has opened these
doors, you are just spinning your wheels. Don't think for one minute
that you will raise your $100,000 and be welcomed with open arms at
WRC-99. More than likely, if you try that stunt, you'll be escorted
out in chains.

There was something else missing in your proposal...oh yes, a business
plan. Strike 2!

I don't see why people will decide to send you a $1.00 out of the kindness
of their hearts. You are assuming this...also you are assuming (wrongly)
that the amateurs in this country that are not members of the ARRL are
even active and that they care at all about the future of the hobby.
Granted that a greater number of no-code licensees are not members of
the ARRL, but I believe that is due to a fundamental misunderstanding
of what ARRL has to offer. The problem is likely due, in part, to
a very poor marketing effort by ARRL. How is your organization going
to appeal to these individuals...by telling them "hey, join us..we're
not the ARRL?"

Oh, what about the discrimination issue...the one where essentially
no one pays dues but ARRL members? I smell a class action lawsuit.
Not easy to defend yourself in court without a revenue stream. Strike 3!

You're outta there...

Shortwave pirate chasing actually has quite a following. George Zeller publishes a direectory each year of pirate stations that he's heard. A lot of them are one-time broadcasts, but some are quite regular. Some even list mail drops that you can send an SASE to for a QSL.

I personally have no problem with pirate stations. They're operating outside the U.S. amateur bands, so they're not interfering. Shortwave broadcast stations aren't found on this frequency either. I'm sure they know the illegalities and the risks, so please spare the lectures.

Even if the ARRL and the US Team do NOT support this idea I think
there will be enough countries who will be interested in voting for
this amendment if the total cw testing ban is not approved. I will
first try to get the US Team to accept this position as a secondary
goal. If they will NOT lead the world ham community then I will talk
to other ham countries about their proposing the idea (if the ban
fails).

Yes Carl it is quite true that your US Amateur Radio license
is not good in any other country other than to exempt you from
taking a test, but I think we all know that.
You are dancing around, or perhaps missed entirely, the original
point. It is that instead of doing the work that was required
to have HF voice privileges in the United States you went to
Mexico and got around the US requirements altogether. Yes I know
that our laws don't apply there, that's not the point. The point
is that you were either lazy or very resourceful, depending on
how politically-correct you want to be. I can take my boat into
international waters and do the same thing for free. Not that
it would do me any good because I already worked for and got my
Extra Class. Not that you, or those like you, really care because
that just makes me a "mean old Extra class snob." Well, I'm not
mean, not a snob and not that old but I am an Extra Class and you
and those like you are jealous. So do the work and become a
mean old Extra Class snob too. I'm always happy to help anyone
who is willing to do the work. I've helped 29 people either
get their ham license or upgrade this year. How many have you
helped this year Carl? How many have you talked out of it because
of your selfish bigotry and/or jealously?

I don't want to rain on your parade, but I doubt an international
treaty would get so specific. The current wording allows the above,
yet gives the member authorities the ability to choose whatever
additional requirements they so desire. The FCC could choose to
select 1 WPM with a Morse Code chart available to assist in
the decoding of the text. Not that the ARRL would ever accept
such a test. ;-)

"Carl R. Stevenson" <wa6vse@fast.net> writes:

-Kevin Muenzler WB5RUE <wb5rue.at@amsat.org> wrote in article
-<wb5rue.970529.143510@amsat.org>...
-> -> .and with a Tech+ license no less...or maybe I should say "no more."
-> -
-> -Actually, Kevin, with a foreign license from a foreign country, were
-> -everything was quite legal and the majority of the hams were friendly,
-> -polite, and trying to learn about radio and do modern things ... what
-> -a contrast with the climate here, where stagnation and class bigotry
-> -abound, all nicely promoted by the ARRL ...
-> -
-> -Carl - wa6vse
-> -wa6vse@fast.net
->
-> Actually it sounds more like you couldn't handle the American testing
-> structure so you went to a country that didn't have one. Is this
-> cheating or wimping out? But no, you'll say that you don't think
-> that the current testing structure is fair or necessary.
-
-Kevin ... read my reply to MD's ridiculous post in the same "wimp out"
-tone of distortion that you try to flame me with ...

But it IS true isn't it? Isn't that why you went to Mexico to
operate? You went there to operate HF voice because it was illegal
to do so in the United States. You went there to get around the
laws of the United States. It's legality is not the issue here.

-All I did was obey the laws of a foreign country where I was living.

-Would you, too, (remember, you're a good Christian, as you've
-said so many times) suggest that those who follow the rules and
-regulations of foreign countries where they are residing rather than
-ignoring them are "lack character and backbone" because they
-follow those rules???

Not once did I say that what you did was illegal. You are clouding
the real issue here. But to answer your question yes I do my best
do obey the laws. Surly you're against "child labor" right? Well it
is legal in some countries and there are American companies who own
factories in these countries. Is it illegal? No. Is it right or
moral? No. The same principle can be applied to what you did. Is
it illegal, no; is it moral, I don't think so. You completely throw
the "work ethic" out the window by such an act. No the "work ethic"
is not a bad phrase, unless you are politically-correct.
No I'm not saying that what you did is anywhere close to the severity

of child labor but the underlying principle is the same.

-> Kind of
-> makes your position much easier from your standpoint. Trying to learn
-> about radio and do modern things, eh? Name me ONE "modern thing" that
-> can be done on HF and not on VHF.
-
-Long distance digital communications without wires or relay stations
-(either terrestrial or satellite) ...

So use 75 baud RTTY, use 300 baud ASCII.

-> I can name many "modern things" that
-> can be done on VHF+ and not on HF -- Fast-Scan television,

-fast scan television is HARDLY "modern" ... the standards have
-remained essentially unchanged since shortly after WW II ...

You are quibbling, it is much more modern than CW.

-> high speed
-> digital, spread-spectrum...the list goes on and on. The only reason the
-> "can't" be done on HF is because of the bandwidth required.

-The primary reason is that the technical regulations pander to the
-long-since disproven concept that "narrower is always better" and
-require absurdly narrow bandwidths on HF that impede the use of
-modern, more powerful techniques ...

This has nothing to do with "narrower is better". There is a very
limited amount of space on HF when compared with the VHF and above
bands. Just look at the 70cm band. That band is wider than all of HF
combined. If high speed digital communications were allowed on HF the
you might fit one or two QSOs on the entire band. We'd be back to
the days of spark-gap bandwidths.

-> How would
-> it be if someone would crank up their ATV transmitter on 20-meters? They'd
-> take out all of 20 and some of 30 or 15 meters.
-
-Nobody with an inkling of what's practical would even suggest such a
-thing ...

Just illustrating your absurdity by being absurd.

-> Or just think of what
-> would happen if someone fired up their 56Kbaud digital transmitter in the
-> middle of the 20-meter CW band. Not to mention the major problems with
-> both modes caused by selective fading.
-
-Proper signal design and coding will handle the selective fading problem ..

Yes it could, I'm working on a DSP system to handle libation fading on
microwave EME reception. So far it is working quite well.

-> They'd take most of the CW band with them.
-> But you don't care, you don't like CW anyway.
-
-Both assumptions based on "facts" not in evidence ...

Both are not assumptions, they are observations.

1. In many instances you have illustrated your distaste for CW.
2. How many 56Kbaud transmissions could you place on 20 meters?
If you relied on simple FSK, maybe six. The other modes would not
be very reliable on HF because of noise and fading. You'd have to
have a pretty good signal for reliable communications.

-> It also sounds a bit like sour grapes. You find that you are incapable
-> of doing or unwilling to do the work (for some reason or excuse) so you
-> insult and ridicule those who have done it, you call it "class bigotry"
-> or "Extra Class snobbery." I don't know of any Extra or Advanced class
-> licensees who aren't more than happy to help a fellow amateur operator
-> advance through the ranks.
-
-The problem with your thinking is that you equate "beep fast" with
-"advance" ... that's a fundamental flaw in your "logic" ... unless
-you're looking at things in some sort of twisted "back to the future"
-sort of way ...

No I equate "beep fast" with practice and work; I equate "advance"
with work. You want the privileges but don't want to do the work.
Saying that CW isn't worth the effort makes it easier to excuse
laziness.

-> BUT I do hear quite a few like you who
-> ridicule those who have achieved the Advanced or Extra to those who are
-> having trouble.
-
-Correction ... I ridicule those who spout "I'm an Extra, I'm *better* than
-those non-beeping, lower lifeforms" ... or things to that effect ...

Yes, unfortunately there are those like that. I tend to not associate
myself with them.

-> You say that it isn't worth the work or you cut down
-> CW or the theory to those who are struggling with it instead of helping
-> them through it.
-
-
-1) Morse isn't worth the work IMO ...
-2) I have never "cut down the theory" ... I have "cut down" Extras
-who don't know Ohm's Law or how to cut a dipole to resonance ...

Yes, there are many of the like this too. I have advocated
testing with every renewal but the FCC has neither the funds nor
the inclination to do such a thing.

-> You perpetuate the problem instead of solving it.
-
-No, I'm working to solve the problem by persuading people to support
-the modernization of ham radio licensing and technical regulations, so
-that ham radio might stand a chance of surviving well into the 21st
-century ...

-> If you don't like the code then so what, stay a Tech. But don't ruin
-> it for those who would like something better.
-
-I'm not ruining anything ... the changes that I support are about the
-only way that ham radio will survive ... you're actually like "Joe" in
-Hans' post of yesterday (Jim's gone ... so is Joe) ... one of Hans'
-more relevant posts of all time ...
-
-Carl - wa6vse
-wa6vse@fast.net

Change and modernization is nice but change for the sake of change
is rarely modernization.

Just an afterthought, why is that every subject tends to degenerate
to CW vs. NO-CW? What does any of this have to do with Part 97 and
working DX?

This discussion refers to the DXTelnet 2.1 software
version.

URL: http://home.sprynet.com/sprynet/wd4ngb

DXtelnet 2.1 allows automatic connection/reconnection
both via radio (thanks to the included DX-TNC program)
and via telnet.
The user can create a script file, for each site, which
will be used by the program to connect automatically
with a "send/receive" model.
When the automatic reconnection is enabled, a dummy packet
is sent periodically to produce a Cluster prompt which
must be received within a certain timeout.
If the prompt is not received within the stated timeout,
the connection process is restarted automatically.
This, not only grants a monitoring of the connection, but
also fools disconnection idle timeouts with a minimum
extra traffic.
The feature has been tested for long time and proved to
be very stable.

I think it's well worth testing it, also to discover other
very interesting DX related features.

If you plan to test DX-TNC, a TNC in terminal mode, TAPR or
WA8DED, is required: kiss or host modes are not supported.
This software requires a pc with Win 31, Win 95 or Win NT.

Care to elaborate? What makes the ARRL more recognized internationally
than KE4IKT's organization? True KE4IKT hasn't demonstrated a good
understanding of the process regarding representation at a WRC, but
how does that impact an organization's international recognition?

You open doors in U.S. politics with money and numbers, and yes,
the position of the U.S. State Department at WRC-99 will in fact
be influenced by politics.

> There was something else missing in your proposal...oh yes, a business
> plan. Strike 2!

Hmmm, I don't recall seeing a business plan for any other
organization posted to this newsgroup. Care to cite any?

> a very poor marketing effort by ARRL. How is your organization going
> to appeal to these individuals...by telling them "hey, join us..we're
> not the ARRL?"

The last line is almost good enough for me. The ARRL is a creature
of its membership, or at least of the membership it seeks. That is
probably as it should be since it is a membership driven organization.
On the other hand, is it the "spokesperson" for U.S. amateurs? Hardly!
You are assuming that U.S. amateurs that are *not* members of the ARRL
are either inactive or hold "no-code" licenses (I don't seem to recall
anything in Part 97 that refers to a class of license called "no-code".)
Some like myself no longer belong to the ARRL because we believe
the ARRL no longer represents our views with respect to amateur radio.
Their handling of the "little LEO threat" and their basic indifference
to antenna restrictions is enough for me to not be a member. Add to
that their rather biased view with regards to requiring amateurs
to know Morse Code for access to frequencies below 30 MHz only
further distances them from my beliefs.

> Oh, what about the discrimination issue...the one where essentially
> no one pays dues but ARRL members? I smell a class action lawsuit.
> Not easy to defend yourself in court without a revenue stream. Strike 3!

Huh? Discrimination lawsuits can only be brought forth (at least
successfully) when they violate Title X(?), i.e., discriminate on
the basis of protected classes. It's been a while since I was
involved in studying discrimination, but there is little that
"protects" an individual from discrimination that isn't explicitly
protected by certain legislation. You can of course try your case
based upon the equal protection clauses of the amended U.S.
constitution,
but that may be a stretch. Perhaps our local participating
attorney Phil Kane may be able to comment.

> You're outta there...

Perhaps, but not based upon the arguments you've provided. Personally
I'd be willing to support an alternative organization (including
monetary support) if I believed it had the best interests of
Amateur Radio at heart instead of its bottom line and publishing
empire to maintain. As Gary Coffman has suggested, creating a
PAC for amateur radio that is separate from the ARRL wouldn't
necessarily be a bad thing.

I agree, had a very enjoyable time! Got every thing to build my antenna system, and enjoyed the entertainment of every one else in the flee market. Unfortunatuly my wife had just broke her foot so she could not go but with two tickets, Yasue gave me two nice hats, and
I had better chance for a door prize. Well I did win a nice freq. counter Sunday. As my associate and I headed home, he was crying that he never wins anything. Both our wives won small door prizes in the past and I won somthing Sunday. Some of our other club friends started
calling him to ask what he won and informed him his name was pulled for the #2 prize, an ICOM
HF rig. Yes we had a great time this year. A big thanks to DARA for a nice show and for being so accomidating when we turned around to collect his prize.

In article 799@netcom.com, wb8foz@netcom.com (David Lesher) writes:

Nice to see a CBer not being knocked for a change.
I'll agree to dissagree on the mobile amp Will, my friend G3NNY and
myself run full legal in the mobile, to say we get jealous/sarcastic
comments from the megabuck base stations with a dummy load on a stick
for an antenna, is a severe under-statement. We have a much modded
BugCatcher and on 160m we can rattle most loudspeakers around the
country, even the dummyload on a stick op's with a deaf receiver.
We're trying to tell them to get their act together, and we're only
running a 13'6" whip. TopBand, a most difficult band to master!

Hi Glen,

I must assume you are unfamiliar with most of Gary's previous posts. I think you'll find you're more in agreement with him than you think. He has previously said some of the same things you do in your post. In particular, he has frequently reminded us that the exams are introductory in nature, and he has (I believe) even suggested open book exams.

The major dispute here would seem to be in regard to the calculus as a prerequisite for a ham license. I happen to share your view on this. The calculus is a virtually unecessary tool in the solution of the preponderance of practical amateur radio related electronics problems. Such a requirement would only add another superfluous appurtenance to the amateur radio regs.

On the other hand, if a guy can sample the output of his transeiver, perform a fourier transform on the data, determine the spectral purity of his transmitter from his calculations, and make adjustments to his transmitter circuitry to reduce the spurious radiations, it seems ludicrous to deny him a full amateur license for his simple lack of code proficiency. To deny him a radio telegraphers license would be appropriate, but I believe those are no longer issued (or are at least not in great demand) anyway.

For what reason must we continue to equate radio amatuers with radio telegraphers? The answer: we don't need to, but we do it anyway to make it seem hard to get a license. This makes some of us feel good about ourselves, knowing that we have overcome this barrier. But I would suggest there are more relevant and appropriate "barriers".

The amateur service does not suffer from the abundance of radio amateurs who have earned their licenses without a code test. It suffers from bad radio amateurs who have not _lost_ their licenses - for mal-practice! The solution does not lie in contrived impediments to licensure for otherwise qualified applicants. It lies in enforcing the rules of the road.

A license is granted as a conditional operators permit. It is a written gentleman's contract of sorts, which carries with it expectations and responsibilities. Our responsibility lies in guaranteeing that applicants know precisely what these expectations and responsibilities are. There exists no expectation that hams must operate CW any more than any other mode, and it is therefore prudent that the Morse code should take no greater precidence in testing than any other mode. No amount of testing will ensure that operators perform as gentlemen. When the contract is violated the license must be revoked, and violators must no longer be

allowed to operate with the impugnity they have become accustomed to in recent years.

Claims of over-crowding are nothing more than self-serving constructs that attempt to preserve an effective monopoly on band space. There is plenty of room for more, concientious operators - absolutely none for the likes of some who occupy the space now however.

I think you'll find that Gary is just a bit more technically inclined than the average ham (if not the average engineer), in case you hadn't already noticed. <grin>

> KD6DMS

I've read some of the replies to your original posting and they all have one thing in common...spending money to BUY an antenna of some sort. I've had wonderful success with a twin-lead j-pole antenna. My wife and I put one together in about 15 minutes. It exhibits gain over a ground plane and especially over the rubber duck antenna that comes with an HT. I take it with me on business trips along with a laptop and an HT to do portable packet. The antenna rolls up into a circle about 4 inches in diameter...including the feed line. Is that small enough?

You can find lots of articles about j-pole antennas on BBS's, in the Radio Amateur's Handbook, and on the internet. Just do a search for j-poles.

Good luck,

Jim Mitrenga (N9ART)

THE 12 COMMANDMENTS OF FLAMING

by Chris Rolleston
(with slight modification)

1. Make things up about your opponent : It's important to make your lies sound true. Preface your argument with the word "clearly". Eg. "Clearly, Len is an unlicensed no-coder, and a beeper to boot."

2. Be an armchair psychologist : You're a smart person. You've heard of Freud. You took a psychology course in college. Clearly, you're qualified to psychoanalyse your opponent. "Jim Applegood (God Bless You!), by using the word 'disingenous' in his posting, shows he has a bad case of....."

3. Cross-post your flames: Everyone on the net is just waiting for the next literary masterpiece to leave your terminal. From POLICY to DX to CB to BOATANCHORS, they're all holding their breaths until your next flame. Therefore, post everywhere.

4. Conspiracies abound: If everyone disagrees with you, the reason can't *possibly* be that your're wrong. There's obviously a conspiracy against you, and you will be doing the entire net a favour by exposing it.

5 .Lawsuit threats: This is the reverse of Rule #4 (sort of like the Yin and Yang of flaming). Threatening a lawsuit is always considered to be in good form. "By saying that I've posted to the wrong group, Didley has libelled me, slandered me, and sodomized me. See you in court, Didley."

6. Force them to document their claims: Even if Guido Milano states outright that he likes CW, you should demand documentation. If Pasternak hasn't written an article on Guido's mode preferences, then Guido's obviously lying. If Pasternak _did_ write such an article, then Pasternak is lying, so the documentation is void anyhow.

7. Use foreign phrases : French is good, but Latin is the lingua franca of flaming. You should use the words "ad hominem" at least three times per article. Other favourite Latin phrases are "ad nauseum," "vini, vidi, vici," "fettucini alfredo", and "retro ludite beeper".

8. Tell 'em how smart you are : Why use intelligent arguments to convince them you're smart when all you have to do is tell them? State that you're a member of Mensa or Mega or Dorks of America

or FISTS. Tell them the name of a big electronics firm you once worked for as an engineer. (Don't tell them you were a sanitary engineer.) Tell them how long ago (before they were licensed) you had an army MOS and read about crypto equipment. Old knowledge is always better than new knowledge.

9. Acuse your opponent of censorship: It is your right as an American citizen to post whatever the hell you want to the net (as guaranteed by the 37th Amendment, I think). Anyone who tries to limit your cross-posting or move a flame war to Netusers is either a beeper, a damn whining no-coder, or both.

10. Doubt their existence : You've never actually seen your opponent , have you? And since you're the center of the Universe, you should have seen them by now, shouldn't you? Therefore, THEY DON'T EXIST! This is the beauty of flamer's logic. If you MUST admit they exist, always refer to them by their last name only. "Smith again shows his ignorance about ITU regulations by....."

11. No one is "wrong" in this newsgroup. They are either 100% totally correct, or they are "a lying scum sucking ARRL parasite" who has an expired copy of Part 97. There is no in between.

12.When in doubt, insult : If you forget the other 11 rules, remember this one. At some point during your wonderful career as a flamer you will undoubtedly end up in a flame war with someone who is better than you.

Hey, what's your name? Are you afraid to sign your name to your messages? Or are you perhaps well known by some already?

What's your background? What's your beef with ARRL? Have you tried working within the ARRL for changes? What makes you qualified to run a National Organization.? What class of license do you hold? How long have you been a ham? What do you do for a living? etc., etc., etc.

This thread goes back over 50 years, I remember in 60's the "AARRLL", and it had some big Texas money behind it; it failed. I didn't see any other post on the subject.

Err... the current ITU Radio Regulations do not specify a minimum code speed. As a result, New Zealand and Canada are free to set any speed that they wish... including one word per hour. Furthermore, countries are already free to specify frequency assignments within each band. As far as I know, US is the only nation which does so....

Perhaps Scofield is advised to do some research into his proposals prior to posting ones that are of little consequence.

Hi,

Is there somebody who has the pin assignments of plug 14 of this old (at least more than 10 years) R&S receiver. The plug is normally attached to the power-supply, which I'm missing, and has two rows of pins (labeled 1-8A & B). Any description on what comes out and goes in would be great. This would help me in building my own power-supply.

Theoretically, a 400 amp-hour battery should last 800 hours at that rate.
.437 amps is pretty large amount of current for a receiver to draw
just the same. It should not pull more than .1 amp.

Check your alternator. You should measure 13.8 volts across
the battery while engine is running (close to this anyway).

If you have a lame alternator, that could explain it.

> fails).

Then that would be a shot in your own foot since a treaty requirement
of a 5wpm speed would be a tougher regulation than we have today :-)

Hint: read the Radio Regulations BEFORE planning on changes to them.
It's postings like this that give some folks the mistaken impression
that no-code means know-nothing. Only in some cases that may be true.

The newsgroup rec.radio.amateur.policy was specifically established
to get the code whingers off of rec.radio.amateur.misc. Please don't
cross-post between these two groups.

Hi,
I've just started studying for my General ticket and I need to
know "what is the best way to learn the morse code?" I'm really looking
forward
to learning it, but I need to know what is the best way to learn the
13 wpm required for the license.

Thanks

I have sent suggestions for changes to the ARRL Directors. We will see
after their July Board meeting just how responsive they are.
But more than one director has told me that the ARRL has no desire to
make any proposal for change at this time. They like it the way it is
now.

the battery probably is not a 400 AH 12VDC battery. Might be 400 cold cranking amps. (sales lingo). I would guess that most car batteries (guess) have about 30 to 50 AH rating at a 1 amp discharge rate. This means you should be able to run a 1 amp load for 30 to 50 hours. Higher load rate for a shorter time. Example 30 amp load will not run for 1 hour.

Now your problem. Turn off your loads. See if the battery still goes down over night. The battery could be bad. The altenator could have a diode that is leaky. This would discharge the battery when the car was not running. See if there is current being drawn from the battery that cant be explained.

Drop me an e mail if this sounds all fishy.

Certainly NOT.
At 5 wpm the FCC would be required by treaty to let me operate voice,
packet, FM, SSTV, any mode I want to on 20m, 75/80m, 160m, 40m, 15m,
etc. Now it is a 13 wpm code test in the USA to get on 20m, etc. I
would call that a drastic improvement if you are a Tech or Tech Plus
class ham.

Well the ARRL and the FCC have it at 13 wpm here in the USA to operate
SSB or digital modes on 20m, 15m, 40m, 775/80m, 160m, etc. If I can't
change that from within I will try to change it from without (via
Treaty). KE4IKT

4334. "Morse" code question

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-30 00:00:00 UTC
From: seward@netcom.ca
Message-ID: <338f309a.18287882@nntp.netcruiser>
Source record: 197087

The 5-level code used for RTTY is usually called Baudot, although in Britain it's called Murray.

Actually, the original Murray code was slightly different from ITA no. 2, our familiar 5-level code: it included symbols like "1/", "3/", and so on for making fractions, instead of some punctuation marks; and like the original Baudot code, it combined letters and figures shift into two kinds of space. However, Emile Baudot's 5-level code was totally different from the 5-level code we use today, while the Murray code is almost exactly the same, with only minor changes.

Now, just as '73 magazine noted this "revisionist plot" :) , there is another famous code that isn't quite the original one devised by the person after whom it is commonly named.

International Morse is not identical with American Morse - the version of the Morse code used over land lines in Canada and the U.S. (well, not any more...), and it is the latter that Morse invented (although some have claimed that 'twas Vail who really came up with the idea).

International Morse Code was earlier known as the "Continental Code". But in looking at books on the subject, and now searching the Web, I can't find out who was responsible for modifying Morse Code (many letters are still the same) to produce the version of the Morse Code still in use today.

Truly, an unsung hero!

John Savard

We all have anecdotal evidence on one side or the other, or both. The
fact is that there are jerks in ham radio, just as there are drunks on
the road. Drunk drivers don't keep sober people from driving, it just
makes us drive more cautiously ourselves.

>The grapes aren't sour for me, not in the least, and I've seen plenty of
>unwarranted Extra-class snobbery. It isn't good for the service, and
>shouldn't be swept under the rug or trivialized.

It should be ignored, for the most part. Avoid the jerks, set a good
example yourself, and get on with the hobby. Don't obsess on what
some moron may have said or done to annoy you. Any "cure" for jerks
is likely to be worse than the disease.

Alinco DR 605 T dual band mobile radio, 2M - 440, with OPTIONAL EJ-24U tone decode board for sale. This radio is MINT, and in brand new condition, purchased on 3/25/97. It is in the box, with original packing, manual, and ALL accessories. I will provide the receipt as well. The radio was used twice in the base for about three hours, and put away. Never used mobile, and I am a non-smoker.

$435.00 shipped to 48 if pre-paid, COD is $5.00 extra

NO TRADES

E-Mail if interested.

Kevin ... read my reply to MD's ridiculous post in the same "wimp out"
tone of distortion that you try to flame me with ...

All I did was obey the laws of a foreign country where I was living.

Would you, too, (remember, you're a good Christian, as you've
said so many times) suggest that those who follow the rules and
regulations of foreign countries where they are residing rather than
ignoring them are "lack character and backbone" because they
follow those rules???

> Kind of
> makes your position much easier from your standpoint. Trying to learn
> about radio and do modern things, eh? Name me ONE "modern thing" that
> can be done on HF and not on VHF.

Long distance digital communications without wires or relay stations
(either terrestrial or satellite) ...

> I can name many "modern things" that
> can be done on VHF+ and not on HF -- Fast-Scan television,

fast scan television is HARDLY "modern" ... the standards have
remained essentially unchanged since shortly after WW II ...

> high speed
> digital, spread-spectrum...the list goes on and on. The only reason the
> "can't" be done on HF is because of the bandwidth required.

The primary reason is that the technical regulations pander to the
long-since disproven concept that "narrower is always better" and
require absurdly narrow bandwidths on HF that impede the use of
modern, more powerful techniques ...

> How would
> it be if someone would crank up their ATV transmitter on 20-meters? They'd
> take out all of 20 and some of 30 or 15 meters.

Nobody with an inkling of what's practical would even suggest such a
thing ...

> Or just think of what
> would happen if someone fired up their 56Kbaud digital transmitter in the
> middle of the 20-meter CW band. Not to mention the major problems with
> both modes caused by selective fading.

Proper signal design and coding will handle the selective fading problem ..

> They'd take most of the CW band with them.
> But you don't care, you don't like CW anyway.

Both assumptions based on "facts" not in evidence ...

> It also sounds a bit like sour grapes. You find that you are incapable
> of doing or unwilling to do the work (for some reason or excuse) so you
> insult and ridicule those who have done it, you call it "class bigotry"
> or "Extra Class snobbery." I don't know of any Extra or Advanced class
> licensees who aren't more than happy to help a fellow amateur operator
> advance through the ranks.

The problem with your thinking is that you equate "beep fast" with
"advance" ... that's a fundamental flaw in your "logic" ... unless
you're looking at things in some sort of twisted "back to the future"
sort of way ...

> I don't know of any Extra class operators
> who aren't happy to help someone learn the code and theory to become
> an Amateur Radio operator.

Elmering is a fine practice ... believe it or not, I've done my share
on the technical side ...

> BUT I do hear quite a few like you who
> ridicule those who have achieved the Advanced or Extra to those who are
> having trouble.

Correction ... I ridicule those who spout "I'm an Extra, I'm *better* than
those non-beeping, lower lifeforms" ... or things to that effect ...

> You say that it isn't worth the work or you cut down
> CW or the theory to those who are struggling with it instead of helping
> them through it.

1) Morse isn't worth the work IMO ...
2) I have never "cut down the theory" ... I have "cut down" Extras

who don't know Ohm's Law or how to cut a dipole to resonance ...

> You perpetuate the problem instead of solving it.

No, I'm working to solve the problem by persuading people to support the modernization of ham radio licensing and technical regulations, so that ham radio might stand a chance of surviving well into the 21st century ...

> If you don't like the code then so what, stay a Tech. But don't ruin
> it for those who would like something better.

I'm not ruining anything ... the changes that I support are about the only way that ham radio will survive ... you're actually like "Joe" in Hans' post of yesterday (Jim's gone ... so is Joe) ... one of Hans' more relevant posts of all time ...

I am in Atlanta. The ARRL regional rep is somewhere in Florida. The
Gerogia state rep is in Savannah. Not in the Atlanta metro area where
most of the hams in GA are located. Even if the regional rep where
located in your city, if the ARRL rep is an Extra Class ham who is
pro-code testing what chance do you have of being heard if you are a
Tech Class ham?

Since more than 500,000 hams in the USA do NOT belong to ARRL I think
there is room for a second national organization to represent them
(and hopefully also) the other hams too.

Yes, my new organization will be PRO-ACTIVE in making suggestions for improvements. Not going backwards like ARRL proposes we do on the code testing exams (requiring everyone to copy perfect 100% code for one minute straight instead of the current system).
>
>And... Let's say, for sake of argument, that a majority of people
>who joined your organization supported continued CW testing... What
>would you do then?
>
>MD

I am in favor of continued CW testing for HF as long as the treaty stands. After/if the treaty is changed then we will need to change our license testing to reflect the new treaty.

If we could not eliminate the cw testing requirement in the present treaty I will propose at WRC-99 (if I am there) that the treaty be amended to say that no nation shall require a code speed exam in excess of 5 wpm for access to the HF bands. If a nation wishes to have higher speed exams for access to certain CW segments within a band that is there right to do so. But 5 wpm shall allow a ham access to every HF band for at least the voice and digital modes of operation.

Working under the present treaty I would drop the Novice and Tech Plus classes of hams. Then I would propose a 5 wpm code test for the General Class license, instead of the present 13 wpm exam. For the Advanced and Extra classes I am willing to consider other test speeds and ideas. I like 10 wpm for Advanced and 15 wpm for Extra Class.

I think there's a fly in your ointment ... you're going to need more money
than that ... especially if you don't have a "house organ" like QST ... which
I am sure represents a significant source of revenue for the ARRL ... the
advertising to editorial content ratio would indicate that it would be a very
significant profit center in a commerical publishing empire, were it managed
effectively ...

My point is that "not having a magazine" is NOT a reason to cut dues, since
it's doubtful that QST is a drain on the league's finances and more likely that
it's a cash cow ... along with the other products of the league publishing
empire.

It's going to take money to run a national organization and conduct its
business.
A "storefront" is NOT going to be enough ... there will be postage and travel
and
advertising and legal expenses, and you'll need accountants to audit the books
and help to maintain a tax-exempt, non-profit status ... and you'll likely need
at
least *some* "paid help" to run the thing ... preferably based in Washington,
DC,
which is NOT a cheap venue ...

> I am
> looking for a name right now for the new org. One potential name
> already submitted is the .... UNITED STATES AMATEUR RADIO ASSOCIATION.

How about PRAA "Progressive Radio Amateurs of America"???
Or RAFM "Radio Amateurs For Modernization" ???
Or AMPR "Amateur Modernization, Progress, and Rationality" ???
Or AMFARS "AMateurs For Amateur Radio's Survival" ???

> There will be a board with at least 3 (minimum) sub boards: The

> dominant over the rest of us. We are all in this together and together
> we need to work on our common problems.

There is NO reason to maintain this overly complex, caste system of
license classes ... the current proposal that many of us support leans
towards two classes ... why have more??? As Gary said, we need
sweeping change, not to maintain the status quo ... and the caste
system mentality is a vestige of "Incentive (to pass faster and faster
Morse tests) Licensing" that *needs* to have a stake driven through
its heart ...

> The new Mode Board will have hams representing the various modes we

> but rather be balanced among all our modes. Any member ham can vote
> for any of these directors, but the person elected must be an active
> user of the mode they represent.

And what of new modes that are not on the list??? I'm afraid that this
sounds destined to degenerate (through inevitible politics) into a good

old boy's association that exists to maintain the status quo of existing sub-bands and mode usage at the expense of progress ...

> The new Band Board will have a director for each band: 2m Director,
> 6m Director, 10m Director, 20m Director, 75/80m Director, 160m
> Director, 1.2g Director, etc. In organizing this way it is hoped that

> certify when they vote that they own equipment capable of operation
> in the band in question and that they have made at least (10) QSOs on
> that band within the last election cycle (4 years i think).

This would seem to result in a body of "experts" or "advocates", each "qualified" only to "represent" a single band ... it's not at all clear what this body is supposed to do or how it could ever build concensus on anything ...

> There may be a fourth Board representing members in the various
> call sign districts (0-9) we have and from Guam to Hawaii to Alaska to
> Georgia to Puerto Rico and the US Virgin islands.

This is like the ARRL divisions ...

> I also propose that there be local CHAPTERS of the national
> organization where members can go to voice their opinions in person if
> so desired. These local chapters can run training classes for new
> hams. Classes for hams who wish to upgrade. Classes for hams who wish
> to get into a new area such as ATV, Packet, CW, etc. Only members may
> vote at the local chapter meetings. local Chapters can raise their
> dues as they see fit since they will have activities that require
> money.

This is getting very complicated with so many layers that I believe that it probably would stagnate because it couldn't move because of its own weight and inertia ...

> Now if you want a new national organization like the above (to
> represent ALL hams), just help me build it.

I'd love to ... I think we need something, but I don't believe one person can "invent" it ... or control it ... or dominate it ... Wayne Green couldn't even with his money and publishing empire ...

I believe that we need to develop something akin to the Constitutional Congress ... a body with some rules of order and process o "invent" the structure, bylaws, and "jump-start" a new organization ...

I am certainly willing to participate in the foundation of such a body ... I am not able to devote huge volumes of time to it ... job and other personal responsiblities preclude that ... but I would welcome the chance to participate in the formation of such a body ...

Who else is willing to participate??? We can start on the net, but before too long we'll have to build enough critical mass and generate enough funding to establish a national HQ office, incorporate, hire a communications law firm in DC, etc ...

Again, I think we'll need a LOT more than $1.00 from every member ... probably more than the ARRL charges, because we don't have the publishing empire to fund and support staff and other activities ...

Well lets see are you saying what could (lobbying) I do if I had
180,000 members or more? Perhaps what ARRL does I would think.
lets see if I go to the FCC or Congress and say that I represent
180,000 hams (or more, those are just the dues paying members,
remember to add the free ones ... how many hundred thousand more?)
and that I want a seat at the table at WRC-99 ... do you think I will
get one? If I have 180,000 members (or more) sending email to the FCC
and Congress do you think we will get noticed?

Leslie (if the QRZ database is correct),

With all due respect ... please reconsider your strategy .. while we need
a new national organization, we *cannot* afford an aborted effort ... your
financial proposals are totally unrealistic like this and cannot support
anything
resembling the powerful organization we need to develop to represent and
protect our interests ...

I cannot support an organization that's based on an unsound foundation,
but I am MOST interested in participating in the formation of something
that stands a chance of success and could become the most postive
force in ham radio's future growth, survival, and prosperity ...

I think you need to slow down and get a lot more people "on board"
before you start making announcements (or pronouncements) about
organizational structure, finances, and other aspects of such a profound
undertaking ...

Please consider these comments thoughfully and in the sincere, helpful,
and concerned spirit in which they are offered and intended ... I have no
reason to doubt your sincerity, but caution you to be careful not to
inadvertently
cause more harm than good by moving TOO fast and fumbling on 4th down
and 1 yard to go ...

Sincerely,
Carl - wa6vse

That is why i propose there be one Director on the Board of my new
national organization who represents the interests of each band. It
might not solve the problem but there will be a better chance of
keeping ALL our bands (not just the ones the HF Cw hams use).

Which band, if any, are you interested in helping me with?
I also need Directors to represent each mode (ATV, CW, FM, SSB,
Packet, AMTOR, EME, Satelitte, Spread Spectrum, SSTV, etc).

Also a Director for each license class: Novice, Tech, Tech Plus,
General, Advanced, and Extra Class.

There is plenty of work for all.

The Southeastern Dx Club had a long running feud with a "contract" employee at Powder Springs who brought up an un-coordinated repeater with input on 147.495 which was only 5 khz away from the SEDXC DX simplex frequency at 147.500. Our Dx alert (reads packet Dx spots) running high power swamped the repeater. This guy actually worked on setting up the repeater while "at work."

He got his friends to illegally drop signals on the Se Dx Packet Cluster ((covers 10 states) and one day a lady from Kentucky said we were interfereing with her emergency net (she was on 450 Mhz!!!!). She was shocked that we were on 147.500 simplex. All this was directed from his desk at the FCC. This remote base stuff is really scarry!!!!!! and extremely poor use of frequency allocations.

The SEDXC moved to 147.51 when cooler heads got involved, but the repeater is still there...inactive like most repeaters most of the day!

Jim,

I have no reason at this point to doubt Leslie's sincerity of motivation ...
but
as I told Leslie, I agree with you about the financial aspects ...

I also agree with your point about founding principles, representation, etc.
...despite my assumption that Leslie is sincere, I don't believe that ANY
single person has the wisdom and all of the ideas necesasry to provide the
foundation necessary for such a large endeavour to have a chance of success
... as I commented, I believe that a "Constitutional Congress" of sorts is a
necessary and appropriate approach to the establishment of such an
organization as Leslie (and many others among us) contemplate and desire.

I would like to publicly emphasize that it is NOT my intent or desire to "turn
the
hose on" Leslie and try to quench the obvious "let's DO it!" enthusisasm that

Leslie has exhibited ... I only hope to help to direct that enthusiasm into what
I honestly believe to be a necessary, safer, and more productive channel ...

Well stated.

>The reason for testing is to assure the government that you *understand*
>enough to be able to operate safely and without causing harm to others.

Hold that thought.

>Memorizing a stock set of questions and answers doesn't do that.

>That's why we want a large question pool, to make rote memorization of the
>exams more trouble than simply bothering to *understand* the theory you're
>supposed to know. If you understand the material, there is no need to memorize
>the exam pool, so the size of the pool is irrelevant. Only if you are trying to
>"cheat" by memorizing the pool is the size of the pool a factor. I put "cheat"

Memorization is a basic part of learning. In fact, the only way to
"learn" most of what you need to satisfy your own description of
"operating safely..." is to memorize it. You memorize the band
limits, the rules and regs, the relevant parts of Part 97, and the
formulas you need to know to work out technical problems. After you
memorize the basics, you have the basis to use those basics to
"understand" the higher concepts that can be "learned" through reason
and experimentation.

Now, to address your comment that "The reason for testing is to assure
the government that you *understand* enough to be able to operate
safely and without causing harm to others." I agree with this
concept, but driving a car is far more dangerous than operating a ham
station, and no driver's test I ever saw required you to understand
the basics of an internal combustion engine, an automatic
transmission, or even how much air you should have in your tires to
ensure that the car would handle safely. Nope, the government checks
your vision, tests you on your knowledge of the "rules of the road,"
your recognition of road signs, and perhaps a few basics of things
like driving on ice, etc. Then they give you a rudimentary driving
test to make sure you can start the car, merge with traffic, drive

around the block, park, and perhaps back up safely. Be sure to buckle your seat belt if you want to pass the test.

Ham radio needs only a similar test to get an entry level ticket. If you want a "chauffeurs license" for ham radio, perhaps you will have to take a more rigorous test, but even then you're not going to need to demonstrate an ability to change a tire, tune a diesel injection system, or rebuild a turbocharger.

Limiting growth with overly restrictive licensing requirements is even more short-sighted than prolonging the CW requirements. Besides, both the code/no code and the "technical tests" issues are red herrings, and have little relevance to what's wrong with the hobby. Arguing about them only distracts us from identifying and addressing those problems before it's too late.

[snip ... in the bud, hopefully]

Leslie, the very first thing that you have to understand is that,
NO MATTER IF EVERY HAM IN THE US joins your proposed
organization, neither you nor that organization will be in any
position to "propose" anything at teh WRC ... that's reserved
for the delegats of the national administrations that are signators
to the treaty and members of the ITU ... "clubs" are NOT eligible
to "join" or to participate in the proceedings ...

Again, not trying to "turn the hose on" your obvious enthusiasm,
just trying to point out a few "bugs" in your approach before they
become problematic ...

I was NOT planning on making it a tax-exempt, non-profit status.
That just gets the government more into your lives and tries to tell
you what you can and can not do. Tax exempt can not do political
lobbying ... remember the problem Newt had?

Second, I am not building a publishing empire, just an organization to
help speak for the other hams.

... and you'll likely need
>at
>least *some* "paid help" to run the thing ... preferably based in Washington,
>DC,
>which is NOT a cheap venue ...

Not planning on a Washington office. Don;t like wash, D.C., besides
Newt lives here, less than 20 miles to his office here.
I/we have the internet.
Valuejet flies there if i need to go there ($49 each way I think).

>There is NO reason to maintain this overly complex, caste system of
>license classes ... the current proposal that many of us support leans
>towards two classes ... why have more???

In my opinion if we try to go from 6 to just two classes of hams the
ARRL will fight with everything they have. And if we get two classes
it will be all out warfare ... us against them ... code vs no-code
..etc. The ARRL says they are willing to come down from 6 to 3 or 4
classes. i say go with 4, less of a fight on our hands. Less blood in
the water.

As Gary said, we need
>sweeping change, not to maintain the status quo ... and the caste
>system mentality is a vestige of "Incentive (to pass faster and faster
>Morse tests) Licensing" that *needs* to have a stake driven through
>its heart ...

I don't want an all-out war, just some modern improvements.
I believe in incentive licensing just not necessarily using cw as the
test vehicle for it.

>
>And what of new modes that are not on the list???

There are only so many modes. i may not know all of them but intended
for all to be represented.

I'm afraid that this
>sounds destined to degenerate (through inevitible politics) into a good
>old boy's association that exists to maintain the status quo of existing

With at least 40 Directors representing every walk of live of U.S.
hams from 160m to 5g from CW to spread spectrum and satelitte from
Novice to Extra from Guam to the U.S. Virgin Islands there has never
been such a broad based organization.
>

>This would seem to result in a body of "experts" or "advocates", each
>"qualified" only to "represent" a single band ... it's not at all clear what
>this body is supposed to do or how it could ever build concensus on

>
I don't necessarily want to just build a concensus.
But on just the License Board there will be 6 Directors, one for each
class. How do you think a vote would go? It would take 4 votes to pass
something. therefore the General, Advanced, and Extra class directors
could not on their own force anything to happen. Only if the Novice,
Tech, or Tech Plus voted with them would it.

>
>This is getting very complicated with so many layers that I believe that

>phone bands!

Would you care to expand on that vaguely insulting remark?

>The CW bands, and the CW operators, will take care of themselves.
>We'd better figure out a way to justify all the spectrum being used
>to support the pandemonium which presently defines HF phone
>operation. Just think of what it would be like if the numbers of
>HF phone 'consumers' were to virtually double overnight? The

Yes, just think! Some of them will be forced to move to other bands,
or to adopt more efficient technology, which, unfortunately for your
fantasy, does not include CW. I'd prefer that the number of users
would quadruple, actually. Then we'd have the kernel of some real
growth and progress in the hobby.

>ITU countries who oppose elimination of the Morse code
>proficiency requirements know what the consequences would be,

What would they be? Details, including rational proof, please.

>and want no part of it! They also recognize the inherent benefits
>of CW operation, and wish to continue to exploit these benefits
>in the future. In other words, they're thinking rationally!

Unlike you, evidently.

>The only thing funny is this whole proposal. The funny part is that
>you're worrying about the WRONG mode! It isn't CW that is in
>jeopardy of being flushed down the toilet, it's HF phone!

In which fantasy world would that be, exactly?

>If I were you, OM, I'd seriously be thinking of an alternative hobby if
>the HF code requirements were to be dropped! The only hams left

Nonsense. I've had more fun and learned more from the hobby since I
stopped wasting time on HF. I haven't used HF for years now. Most of
the progressive hams I know don't use HF much, either. YMMV, I
suppose.

>who will still be able to have any good, reasonably satisfying, and fun
>communications will be the CW operators! The phone bands will be
>a completely unusable mess! Think about it! The problem isn't that

That's pure, unadulterated nonsense.

>CW doesn't filter lids out, it's that putting a microphone in front of
>the average ham usually CREATES a lid! As a CW operator, I'm not

More nonsense.

>worried about what may happen in 1999 -- but I'm concerned about what
>got started when SSB was invented! Ham radio has been on a
>downhill slide ever since! It seems as though the power of the
>microphone has never failed to corrupt the users of that device!

That's pretty funny, Larry. Thanks for the good laugh and the insight
into the mind of the die-hard CW op. I only wish that what you wrote
were a parody.

Larry ... (see I used your first name, even though you're being sarcastic) :-)

I believe that you are actually smart enough to have realized that my
"send me your check for $100" comment was in jest ... at least at
the time and in that context ...

I have no desire to handle money or finances for such an organization ...
though I would encourage everyone to contribute generously, IF AND
WHEN something CREDIBLE is launched ... THAT will, IMHO, require
a sort of "Constitutional Congress" approach, NOT the lone efforts of
ANY individual, no matter how sincere and well-meaning ... it's just
too big and important a job to not REQUIRE more effort, talent, money,
etc. than any single person can muster ... I am not trying to insult
or demean Leslie in any way here, just to persuade Leslie that more
people and money are necessary to create a credible organization ..

I will support a credible effort in the direction of establishing such a
body and founding such an organization ... both with some of my time
and effort (within the constraints of job and family responsibilities) and
with my money (some, not all <grin>) ... but I have no aspirations of
being it's "leader" as Larry suggests ... I'm not a figurehead sort of
guy ... and I wouldn't dream of handling the finances 'cause I'm an RF
and systems enginer, not a bean counter or an MBA or such ...

But I'll happily allow you to host the lobster dinner so I can personally
collect your dues check, but only as an errand boy, for delivery to the
duly-elected/appointed treasurer of said organization, of course ... :-)

Questions like these are exactly why you need the advice of
GOOD lawyers and accountants ...

> Not planning on a Washington office. Don;t like wash, D.C., besides
> Newt lives here, less than 20 miles to his office here.

Doesn't matter if *you* like DC or not .. that's where the government
is and you need at least representation there and having a HQ
office there is even better if you expect the government to take you
seriously ... that's why the NRA and other effective organizations have
offices there ... it's "where the action is ..."

> >There is NO reason to maintain this overly complex, caste system of
> >license classes ... the current proposal that many of us support leans
> >towards two classes ... why have more???
>
> In my opinion if we try to go from 6 to just two classes of hams the

> I believe it is NOW.

If you're going to try to dictate structure, policy, and everything else,
it's not really a representative organization ... you need a widely
based body of "founding fathers" ... this is NOT the sort of thing
that one person can do himself and/or "rule."

I disagree. Almost all of the problems occurring in ham radio could and should be handled internally. The ARRL has not only been lax in stepping forward to provide leadership in this area, but has refused, in some cases, to even get involved.

We are supposed to be "self-regulating." The FCC has neither the time, the funding, nor the inclination to act as playground monitor for a bunch of overaged juvenile delinquents. In the rare cases where we really do need government intervention, we could probably get it, IF we were willing to pay for it. But almost every time there's been a suggestion that ham license fees might be raised to help fund enforcement, the ARRL has opposed any increase in license fees. Hams who are willing to pay thousands of dollars for fancy ham gear, and healthy fees for vanity call signs balk at paying a dollar or two a year to fund enforcement of the rules and regulations.

Well who will be talking for the USA on matters governing AMATEUR
RADIO operators in the USA at WRC-99? I would expect the ARRL to
have someone on the US team. If I have as many or more members than
the ARRL I will expect to be on the US Team too. The sooner we do (get
the members) the sooner i will ask for a position on the U.S. Team.
If we have 300,000 members and the govt says I can't be on the US Team
then I will ask Newt to see what his office can do about it.

>Then you must realize that there are other significant

I am not a traditional politician or leader. i say what is on my mind
and I mean what I say. This makes both friends and enemies. Sometimes
i might even say things that are on the side of the ARRL. Of course
this can not be done without help from many people from many parts of
the country. If it is a good goal I think it will get done. the time
is right.

>> But there are more than 700,000

I think that might be true. There is plenty of room for both of us.

>> Even the ARRL would have to take notice.
>
>If you get 250k-300k, the ARRL should pack its bags and step aside gracefully

The ARRL has done many fine things for amateur radio. There is plenty
of room for both of us. I hope they continue their contributions to
amateur radio. I don't plan on being another ARRL. But rather an
entirely different kind of Association.

I heard Newt say on the radio this week, that if we had a republican president we could move things a few feet to the right. But with Clinton all we (he) could do was move a 1/4 inch at a time. But even that requires a fight but in the end of the day is better than where we started.

I don't expect to win all wars or make all hams happy in one day. Even if our sole result is to affect the ARRL, then that is good.

Hello, cops! Go get 'em! At any given time, there's probably a robber, a rapist, a murderer within a two mile radius of your present location. For God's sake, find 'em!

While you're at it, why don't you get some of those nice old respectable men who rob with a pen instead of a gun. You know, the doctors who perform unnecessary surgeries, the insurance agents who overinsure old widows, the brokers who churn the selfsame old widows' savings, the hard masters that runs medium and large business by cheating their customers and their employees so they can cram a few more dollars in their pockets, the television programmers who are so obsessed with crime and crashes that they are battering the human soul, the advertisers who sell cigarettes to little kids and so on, and so on...

War, sin, killin and a-robbin
It seems that the world
is one big problem. (1)

I'd like to know the opinion of other hams who have purchased the
ARRL Handbook on CD. They say it has everything on it that's contained
in the printed version. Maybe it's just me, but I think this has to be
the all time lousiest handbook I've seen in my 50+ years as a ham.
Really bad! I can no longer figure out what the ARRL is all about.
They haven't changed much since I became a member in 1946. Talk about
stuck in time. We're all sinking on leaky ship named "ARRL TRADITION."
But, I guess at my age I'll just have to go down with the ship. I'd swim
to another one, but I don't see any on the horizon. Maybe
it's my trifocals. Anyway, I hope I can get my $50 back......

I'd really like at least one example of how/when the ARRL
has refused to even get involved.

Additionally, what do you see is needed to provide
the leadership you expect or desire.

I have to agree with this thought. I find it difficult to belive that
any ham couldn't afford an annual fee of $10 a year or $100
once every ten years.

>little choice, but our sense is that use of the old 16-bit Windows is
>pretty limited. Anyone have a gut feel for Win3.1 usage among their
>friends, *especially in packet operation*?

I still prefer DOS and use it when I can because there is less operating system to get in the way between me and the machine, and I suspect there are many other hams out there who feel similarly. Windows in both major versions also squanders too much of the system's resources on the interface for my liking. The only reason for non-computer-neophytes to use Windows as far as I am concerned is because it allows multitasking and because most new software forces us to use them. It's all part of Microsoft's planned obselescence ploy.

My intention here is not to start an operating systems war but to register my preference for DOS and, grudgingly, Win 3.1 versions of new software.

Sounds great. Most hams will take anything, if it's free......

And you can use the all the $1 you collect to fight the discrimination lawsuit
from the ARRL members who didn't get the first year for free......

Sounds like you're off to a flying start to me. Sign me up. I'll owe you the
$1.

ROFLMAO! The notion of 10,000 hams being able to afford a vacation in Switzerland is ridiculous! I base this comment on the fact that the price of junk at the Dayton Hamvention flea market went way up...with no bargaining allowed! An old "Ham-Key" straight key (original price... maybe $20.00) going for $60.00??? Excuse me??? I didn't stick around for the guy to insult my intelligence by telling me it was "rare..."

>KE4IKT
>Founder U.S. Amateur Radio Assoc.

I'm curious about something...you want to start an alternative organization to the ARRL...but don't even think it's important enough to state your full name! What gives here? I know from the QRZ database that your name is Leslie Scofield, but why all the secrecy? Axeually, I'm surprised you're not using PGP (Pretty Good Paranoia) to compose your messages, a'la Squiggy!

BTW...I'd guess that if you were able to attract approximately 10,000 dues paying (not at the $1.00/yr rate!) members a year, and all of these members were unusually concerned and proactively seeking solutions to their concerns, in about 10 years or so, you might be able to begin to get some recognition from the ARRL as an "alternative organization. In the meantime, where's my membership application? Who do I pay my dollar to? Even more basic....when are you going to start attaching your name to your organization?

There are inconsiderate people on HF chasing DX, there are inconsiderate people on VHF FM... What's your point, that there are assholes who have amateur radios?

>Additionally, or Hispanic brethern to the south take a dim view
>of the intentional QRM and "greaseball" and "beaner" comments
>that Spanish-speaking QSOs often encounter...

Can't say I ever hear someone keying "greaser" on HF CW... But then again, I've heard some of our hillbilly brothers in the Deep South, living in the makeshift trailers with more ham gear than the entire state of RI combined, getting on with the "good buddies" on SSB and saying that on HF SSB... Using your rationale, I guess we need to get the FCC to tell equipment manufacturers to take the "SSB" button off their radios.

It's likely that it was just the alternator's time to go. From the description
of the failure, the bearings seized, and that's a mechanical problem, not
an electrical one. It doesn't sound like you were attempting to draw excessive
power from the unit.

>The Toshiba laptops have built-in power supplies and therefore need 110V
>AC. Too bad Toshiba didn't leave a 12V DC port on the outside of the
>case. That would have made it more mobile-friendly.

Yeah, but lots of laptops want 18 VDC (that's what their wall warts supply)
to charge their batteries and leave a regulator margin for their 12 VDC
internal needs (RS-232, disk drive power, etc). So using an inverter in the
car is about your best option.

I use a 200 watt UPS in the car, with the internal UPS battery paralleled
to the vehicle electrical system with diode steering (RV kit). All I had to
do was cut the wire to the beeper telling me AC power was lost and I was
set. An inverter might be cheaper if bought new, but I had an extra UPS
that used 12 volts internally (some series connect their batteries and use
a higher DC voltage internally, these won't work in the car).

One advantage of using a UPS instead of just an inverter is that the
power is typically better conditioned and isolated from the vehicle
electrical system. That can be important if you're powering an expensive
laptop.

I am reluctant to endorse a pure operator type of license using
reduced power and commercial equipment only. I'm aware that
Canada does this, but the US already has such a radio service,
it's called CB. Is that what we want amateur radio to be? Apparently
people like MD do, but I don't think it meets our charter goals.

Let's see here, the title of Part 97 says "Amateur Radio Service"
In Part 97 it all says service 239 times. Now hobby comes up
0(zero) times. Hmmm!

Service = 239
Hobby = 0

I wonder which one wins? Does AC6V know how to count?

I will pose this question one more time. No one has yet to answer
it because they know what the answer will be.
Here is the question:

If the FCC were today to establish the Amateur Radio Service, would they take
spectrum away from someone else and give it us? In the climate of todays
communication boom would the FCC grant us spectrum 5, 10, 20 years from now?

On another note someone quoted that there is a difference between amateur
and professional communicators, He's right, Professionals communicate
because they get paid. Amateur's communicate because they love it.

A *good* OS enhances the functionality of the hardware and makes the
programming and use of applications better and more productive. DOS
doesn't deserve the title of OS, it is merely a program loader. Win3.1 is
merely a GUI on top of a program loader. Win95 has some pretentions
of being a real OS, but like most things Microsoft it is so buggy that it
is undependable. Contrast the Microsoft virus to a real OS like unix
and you see what I mean. How many Microsoft users can claim an
uptime of 754 days?

>My intention here is not to start an operating systems war but to
>register my preference for DOS and, grudgingly, Win 3.1 versions of new
>software.

We have Linux. It is a real operating system. It works. It offers the stark
simplicity of the command line like DOS, or the richness of a point and
click environment under X like Win95. It is a true multitasker. It inherently
supports and enhances its hardware platform. And best of all, it is freely
distributed with source code. There are literally thousands of applications
available for it, and writing your own additions in shell, Perl, Java, C, etc is
nearly painless. Amateurs should adopt it as their standard platform because
it has the same philosophy and spirit of openness. cooperation, and innovative
spirit as amateur radio should have. (And the fact that it is free and works on
minimal hardware should make cheapskate hams happy too.)

We should encourage software authors to look at Linux *first* as the platform for developing amateur software. I know that there is a chicken and egg problem here, but we'll never break out of the grip of the Microsoft virus if someone doesn't start the ball rolling in another direction.

>that band.

While the example posted sounds more like the activity of a contester than
that of a technical pioneer, I would hasten to add that when Sam Harris
decided to do EME he invented the parametric amplifier as part of the
effort. That technical innovation had an impact on both the commercial
and military communications worlds all out of proportion to the operating
time he spent on the band.

Members of any radio service can occupy spectrum, look at CB, but to
utilize it in a way that is beneficial to the goals of the service is a different
matter. That's what counts, not just a body count. If our only goal were to
fill the spectrum with RF, we could switch to WBFM and fill all our available
VHF spectrum in a heartbeat. But that wouldn't do anything to keep that
spectrum. Others wanting it would just say, look how wasteful the hams
are being.

>What do you want, third graders? You're entrusting these people with

You're damn right I want third graders. Those kids are future
potential engineers, technicians, and movers/shakers. I don't know
when Barry Goldwater got his ham ticket or how technically skilled he
was, but he did more for ham radio than a hundred EEs sitting around
tinkering with fancy new Black Boxes.

>permission to do things with significant possibility of causing harm.
>Don't you think that they should have to have at least a rudimentary
>understanding of what they are doing?

Hell, everything has potential to cause harm. The dangers of ham
radio are highly exaggerated. Every home has a microwave and a TV set
and a bunch of more-or-less exposed connections to 110 volts or more.
Computers are getting ubiquitous, too, and so are cordless phones.
None of that stuff requires a license, and most of it doesn't even
have warning labels. All that stuff is as dangerous or more so than
the average ham station.

>>Are we looking for new hams here, or candidates for employment in the
>>engineering division of IBM or Motorola?
>
>No, we are just looking for people with a high school level grasp of science
>and mathematics who can easily learn the material needed to operate in

>that includes permission to operate a 1.5 kW station).

You don't need to know higher math to safely operate a ham station,
any more than you need to know how to set the valves on your Volvo to
be a safe driver.

<stats about education deleted>

Well, the SATs have been "adjusted" for lower scores, I understand. Nothing personal, but we all know that statistics can be used to "prove" anything you wish. Any random sampling of posts from an .edu account will reveal the appalling education of todays' best and brightest. Yes, there are smart kids out there. Probably more than ever before. That's no reason to deny a ham ticket to those who don't know or care about calculus. If you don't use that stuff on a regular basis, you forget it. I took three semesters of calculus in college in the '70s, and I can't remember ANY of it.

>>After reading all the qualifications expected here for an *entry

>
>I find it more than a little shocking that the circle of amateurs you
>know are subpar compared to bright high school students. That does

Nothing shocking about it. You're a technically oriented person, probably employed in a tech firm. It's natural that your friends are going to have similar views. I know lots of competent hams who can do wonders with radios and computers, but they've learned it empirically, rather than studying it in school. This used to be called "amateur methods" if I recall correctly.

>reinforce the idea that we've been emphasizing the wrong things in
>our recruitment and selection processes over the years.

Perhaps, but limiting new hams to only those interested in higher math, science, and physics will inevitably doom the hobby.

>far off the mark. For goodness sake, logs are a *6th grade subject*. Just how
>stupid do you want amateurs to be?

I want to allow FIFTH graders into the hobby, too, before they get sidetracked with girls and cars. Stupid is as stupid does, I heard somewhere. I've seen a few brilliant "tech" type people who couldn't safely erect a tower if their life depended on it, as it very well might. You worry about dangerous, you better put some tower climbing skills on your list of questions, along with a detailed exam on concrete strengths, guying techniques, windload calculations, etc. Tower installation is a lot more hazardous than operating a ricebox. So is driving a car while talking on two meters. You can't weed out idiocy with a tech test, any more than you can filter out lids with a CW test.

>>We need hams with "people" skills as well as with technical skills.
>
>Yes we do. In addition to a minimum standard of technical skill, we would
>like amateurs to have people skills as well. Though not all amateurs need
>exhibit those latter skills to a high degree, all amateurs need those minimum
>technical skills because all of them operate transmitting equipment with the

>possibility of malfunctioning and causing harm to the unwary.

That's hyperbole, Gary.

>>We need folks who can organize programs to get young students exposed
>>to ham radio. We need hams who can teach. We need hams who can

<list truncated>

>Sure, we need all that, but that's not an either/or with having a minimum
>technical competency as well. Would you give a great car salesman a
>driver's license even though he can't keep a car between the ditches just
>because you need a great salesman? Of course you wouldn't. You want him
>to be a great car salesman who also won't wreck your demonstrators and
>kill your customers.

More hyperbole, and bad logic, at that. I've already expounded on
this fallacy. A good driver does NOT have to fully understand
everything that goes on under the hood.

>Yes, I've advocated open *reference book* exams too. I think the tests
>should correspond with the sort of real world way amateurs would be
>expected to solve problems. I don't expect them to regurgitate a bunch
>of rote memorized facts. I expect them to be able to demonstrate real
>world problem solving skills. But we aren't talking about graduate level
>EE stuff here. That would be several orders of magnitude beyond the
>levels we are looking for.

No disagreement here. You've put your case in general terms here,
allowing for a more reasonable interpretation of just how much
technical knowledge is needed to ensure safe operating.

>The problem is that the current exams are on such a ludicrously low
>level that what I'm proposing may seem hard by comparison. In other
>words, our current entrance exam wouldn't strain a bright 3rd grader,
>what I'm proposing would be a slight challenge to an average or above
>average 9th grader. That's at least 7 intense years below an EE level.

As I keep pointing out, we should not exclude younger hams. The
ticket should be an INVITATION to learn, not a reward for learning.
Many of us had little interest in electronics until AFTER we got the
ham ticket.

>I wouldn't hand a loaded gun to an infant, and I don't think we should
>hand permission to operate high power VHF/UHF equipment to people
>unable to comprehend some of the potential consequences of that.

More hyperbole.

>Just how dumb do you want hams to be? Must we have exams which
>those in the lowest 10% of their class can easily pass? Even if that
>makes them potentially unsafe and unable to comprehend the implications
>of the regulations they are supposed to obey?

An exaggeration of my position; a strawman which needs no rebuttal.

>I think exams need to be sufficient and necessary, no more, no less. And
>I don't think it reasonable that an exam couched on the level of a bright
>3rd grader can be either. In fact current exams are worse than that, with
>a 5 year old holding an Extra ticket. Now that's worse than absurd. That's
>obscene.

I disagree. That 5 year old has a ticket to a lifetime of fun and
learning. What qualifies you to deny him that opportunity? He may be
the next Goldwater, Collins, or even the next Gary Coffman. I'd love
to see half our ranks consist of grade and high school kids, instead
of being dominated by rich old white guys.

>this rig.

I've had one of the original 706s since it was introduced. It is in a class of its own, nothing else competes with it. But the class that it is in is a niche, IE for those needing a very compact mobile rig capable of HF through 2m all mode operation. It has a number of compromises which make it less than perfect, but nothing else offers so much in so small a package.

If you only need a very compact traditional HF rig, the Alinco DX70 can be a better choice. If you want a larger but better performance HF rig, Yaesu has the field nailed with its FT9xx series. Kenwood doesn't offer anything comparable or competitive with the others (the TS-50 is a distinct also ran), so you can ignore them.

Icom doesn't have anything else suitable in your price range (the IC756 pushes $2k and their other low end offerings aren't significantly better than the IC706). But if you look on the used market you can find an IC735 for around $600, and that remains an *excellent* HF radio (it had the longest production run of any amateur radio ever, they got it right the first time). You might also consider a used TenTec rig, but ignore the Scout, it is not the bargain it appears to be. Look for a used Omni or Corsair.

Hi..
At last someone else with some common sense input.. I
have been trying to put this point accross FOR YEARS !! I feel sorry
for the poor Win95 users who are so stumped the minute something goes
wrong, and supplied drivers won't load etc..

I refuse to join the ranks of the brain-dead point and
click brigade.. I wonder if you have got a - Boycott Microsoft - link
on your site.. I have.. http://www.innotts.co.uk/~rur.

Cheers Paul g0rur

>just commit the questions and answers to short term memory and don't
>really retain anything.

Memorization is a part of learning. One has to memorize the basics so
they have the foundation on which to build and apply various principles.
Nobody is against would-be amateurs memorizing and learning to apply
Ohms Law, for instance -- but merely aquainting oneself with the
material in the examinations does not fulfill the technical aspects
the hobby is supposed to appeal to.

>Now I'm not a fan of memorization myself. For things like band limits,

>and regs are arbitrary manmade constructs subject to change, a current
>copy of Part 97 is the best way to deal with them. Anything you memorize
>for the test may be out of date tommorrow.

I have no problem with any of this, but one question: if you are not
familiar with Part 97 enough to know, or suspect, something is
"against the rules", why would you go and look it up? Let's take the
pizza-autopatch example of many years ago, before it was clarified by
the FCC.... If you were not aware that business use of the bands were
prohibited, you certainly wouldn't refer to Part 97 to see if your
pizza autopatch really constituted business use.

>Now the principles underlying theory have to be understood, but that
>doesn't mean memorizing a bunch of detail formulas and constants.
>Those are printed in reference books too. You need to know the principles
>involved, and know where to look up the constants at need, but you can

>handbook for them. Too many people try to work the other way, memorizing
>a bunch of detail formulas, but not understanding the principles behind
>what they are mechanizing. That's rote cookbook behavior, and doesn't
>demonstrate any real understanding.

If you don't have a basic understanding of certain concepts, you have
no basis for referral to the reference material. Sort of like when you

ask someone "how do you spell supercalifragilisticexpsyalodocous?" and
their reply is "go look it up in a dictionary.

>If the US entry license were like that of Canada, I'd agree with you.
>Their entry class is required to use commercial radios and leave the
>covers on, much like our CBers. But here in the US the entry level is
>allowed to build and repair transmitting equipment, so they need to
>have more than mere operating knowledge. ...
...
>But I think the exams need to be sufficient and necessary. Today's exams
>don't meet those criteria. Some parts of the exams are not sufficient and
>some parts are unnecessary. So a readjustment is needed.

So, it would appear that the operating privileges of the entry-level
class need to be structured in such a way to better reflect on the
knowledge of those individuals in it, not force people who don't want
to clutter their minds when a bunch of useless information to become
sufficiently acquainted with it so they can pass a test.

>It is not my intent to generate explosive growth in amateur radio.
...
>Our current problem is not a lack of numbers.

Well, I'm glad someone on the anti-code segment is acknowledging that...
It seems one of those "anti-Morse-Myths" is 'we need to flood our bands
with new blood to save them'...

What's your point?

How many times does Part 95 refer to CB as a "service" versus a hobby.

Hmm, could it be the "super computer genius" named Jobs, or the one named Gates? Seems the real innovators and big money makers have been college dropouts who hire and fire by the trainload those who blindly put up with the absurdities of the education factory.

Putting up with the meat grinder that is the education factory seems to only fit you to be a lower level cog in the corporate or government machine. The purpose of many of the arbitrary requirements is to grind out any spark of originality or initiative you might have so that you'll be a good little corporate robot and loyal party man.

>to do something else."

Burnout is a serious problem, for reasons you mention above.
Innovators need to groom others to take over where they leave off.
It's not a simple thing to let go of a system you've slaved over and
consider "your baby," but it's essential if there's going to be any
continuity in an ongoing project such as a packet network.

>You should have been at the TAPR Bash at Dayton. TC and Karn laid it on the line

>homeless in short order. That got some blood pumping. A few of the white haired
>crowd raised the traditional defenses, but that sounded more like whistling past
>the graveyard than something that they really believed.

That's all well and good, but most of us in the everyday world of ham radio never hear of this sort of thing. I'd venture that a large majority of packet operators have no idea who Karn is or what he's done. I doubt that most of them could even tell you what TAPR is or what they've done or stand for. Even someone like myself, who has more than a passing interest in packet radio, finds it like pulling hens teeth to get any real information out of TAPR here on a newsgroup that's supposedly dedicated to such things.

I applaud you, Gary, for at least contributing some real information here, without any needless invective included. I don't understand too much of it, but it gives me an idea of what's possible, at least.

>i would be there too.

The ARRL has *observer* status at WRCs (bought through hard drinking at earlier conferences). It can't speak, and it can't vote. It can throw lavish parties for the delegates and lobby behind the scenes attempting to cut last minute backroom deals. It should be noted, however, that national administration delegations will already have their agendas and positions firmly fixed by the time of the conference. Much of the conference is formality, though there is often some last minute wrangling over contentious points. The real time to have your influence felt is while national positions are being formulated. This process typically occurs two years before the conference, IE *right now* for WRC-99, because ITU rules require that national positions be circulated to the member states well before the conference convenes so that deals can be made and differences worked out before the formal proceedings begin.

In the US, the national delegation agenda is set by a working group of the Department of State. The diplomats run it, but the FCC and the NTIA and other interested parties have input. In other countries, the process can vary. It is these folks, at this level and at this time, you have to influence to have an impact on WRC-99.

In years past the ARRL has used WRCs, then called WARCs, as an excuse for costly junkets for its officials, with lavish hotel suites, big drunken parties, etc, but very little in the way of real lobbying. The current BOD seems to favor a more austere approach, but it will still be more of a social gathering than anything else, merely ratifying already done deals. If you think you can waltz up to Geneva in 1999 and have an impact, you are sadly mistaken. That's not how the game is played.

Newt had problems because he was clumsy and had bad legal advice
from the House Ethics Committee lawyers. Non-profits can do political
lobbying, it just requires properly following the rules (the NRA-ILA is
a very good example). If you *don't* apply for tax exempt status, you'll
be throwing 50% of your corporate income down the rathole. Can you
really afford to do that? Money is the lifeblood of politics.

>Second, I am not building a publishing empire, just an organization to
>help speak for the other hams.

The ARRL publishing empire is a cash cow which brings in the bulk of
ARRL's income. They couldn't function on dues alone, and their dues
are a lot higher than you are intending to charge.

>... and you'll likely need
>>at

>I/we have the internet.
>Valuejet flies there if i need to go there ($49 each way I think).

No good. Political lobbying is a personal game. You have to make in the
flesh personal contacts with the people you intend to influence. And you
have to do it regularly. These contacts are mostly social, IE you need to
belong to the same clubs as they do, you need to be seen at the same
parties they attend, etc. They've got to start thinking of you as one of their
in-group, someone who'll be at the top of their list to consult when they

need to know something (might not have *anything* to do with amateur radio). Once you've built a personal bond with them, and have done enough favors for them that they owe you, they'll be open to listening to your ideas, and doing a favor for you from time to time. That's how real politics works, and how real lobbyists function.

Newt may be Speaker, but he isn't very popular with the bureaucrats whose arms you'll need to be subtly twisting to get things done. Rolling him out frequently would be like having a loose cannon on the deck. It is likely to win you few points, and could be very costly.

>>There is NO reason to maintain this overly complex, caste system of

>..etc. The ARRL says they are willing to come down from 6 to 3 or 4
>classes. i say go with 4, less of a fight on our hands. Less blood in
>the water.

Blood in the water attracts the sharks. A little blood or a lot, it doesn't matter, the sharks still come. There's a saying, in for a penny, in for a pound. There's going to be a battle any way you slice it, you might as well go for broke (you will be anyway) and strike directly for your ultimate objective. There likely won't be a second chance. The FCC is very reluctant to revisit issues very frequently, and the WRCs are even more so. Whatever you get, you're going to have to live with it for decades.

> As Gary said, we need
>>sweeping change, not to maintain the status quo ... and the caste

>>its heart ...
>
>I don't want an all-out war, just some modern improvements.
>I believe in incentive licensing just not necessarily using cw as the
>test vehicle for it.

Government licensing tests should be necessary and sufficient, no more, no less. There's no way to justify incentive licensing on regulatory or logical grounds. Either one is qualified to access certain spectrum, or one isn't. It is illogical to assume that one is competent to operate on one frequency but not on another a few kilohertz away using the same modes and power. But that's what we have now. It cannot stand rational scrutiny. That's the weapon you have to use to get *any* change, and the weapon will be blunted if you don't carry it to its logical conclusion.

>>And what of new modes that are not on the list???
>
>There are only so many modes. i may not know all of them but intended

>for all to be represented.

There is potentially an infinite number of modes. Only a few are currently popular, but who knows what's currently a gleam in the eye of a developer. It is very likely that the next hot thing will be something you can't even imagine right now. If we aren't open to that, it may be aborted by rules with the unintended side effect of quenching its development.

The ARRL needs competition, if for no other reason than to keep them honest and on their toes. One party rule is never healthy over the long run. I'd like to see your organization succeed. But you need a lot more savvy to pull it off than I've seen so far.

4417. Mobile installations in Toyotas

Newsgroup: rec.radio.amateur.misc
Date: 1997-05-31 00:00:00 UTC
From: ricktjader@NOSPAMids.net
Message-ID: <338ff231.821294@paperboy.ids.net>
Source record: 196895

My trusty old Honda Civic (185K+miles) has finally died. I have ordered a new Toyota Camry which should arrive in about 3 weeks.

In the meantime, I'm looking for advice on the installation of mobile rigs in Toyotas. I consulted the August 1994 QST article on the installation of ham radios in cars....it referred to a Toyota publication called "Installation of Two-Way Radios in Toyota Vehicles". However, neither Toyota Customer Service nor my local dealer has heard of it.

Has anyone heard of such a booklet?

Any specific advice anyone might have on mobile radios in Toyotas would be very much appreciated!

Thanks,

Rick Tjader
Barrington, RI

_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #218 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 6-Jun:
-
1. FCC Chairman Tenders Resignation, Several Candidates Mentioned
2. RAC Announces Rep to Friendship Radiosport Games in Tokyo
3. Vermont Joins PA and NY in Recognizing Amateur Radio in June
4. 3C0DX DXpedition Postponed at Last Minute, Now Set for '98
5. ARRL DXCC Desk Keeping Up with Application Demand
6. News from the "Clarke Belt"
7. "The RAIN Dial-up" from Chicago
8. "Ancient Amateur Archives" with Bill Continelli, W2XOY
9. Special Event Station Calendar
10. KB5UAC Active from Mir during Memorial Day Weekend
11. Shannon Lucid Receives Award from Russian President Yeltsin
12. Weekly Propagation Forecast
13. KC4LWI, BVDS/This Week Webmaster, Wed in Roanoke Ceremony
-
Funding for the program's transmission and production expense has
been provided by a grant from Mike Leiviska, KG0WR, of Andover,
Minnesota, where "This Week in Amateur Radio" is heard Saturdays at
8:00 PM throughout the Twin Cities area, as part of the "Saturday
Ham Talk" net.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier. On the Internet,
audio is available each Sunday in 8-bit .WAV file format, sampled at
11.025 kHz, at http://www.intrlink.com/~sparky/wb4qoj/wb4qoj.htm
through the courtesy of the Blue Ridge Video and Digital Society of
Roanoke, VA. A separate "RealAudio" file is also available at this
site. The service is carried on VHF/UHF repeaters throughout North
```

America and by WA0RCR on 160 meters at 1860 kHz.
-
Here in the Capital District, "This Week in Amateur Radio" is heard on our "flagship" repeater, WA2OQE/R in Troy, on 145.33 MHz, courtesy of the Niagara-Mohawk Amateur Radio Club. The program is repeated Mondays at 8:00 PM.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.NY.USA.NA via amateur packet.

If I pay the freight I will go.
I am not in favor of just eliminating cw. Or all cw licensing. Just
the present structure, like the 13 wpm, here in the USA in order to
operate HF phone or digital modes. A 5 wpm requirement that would
authorize ALL modes in every hf band (except those bands under treaty
that prohibit certain modes for ALL hams).

Well then it sounds like the U.S. Amateur Radio Association should
push for *observer* status at WRC-99 (after we get 50,000 or so
members).

and lobby behind the scenes attempting to cut last minute
>backroom deals. It should be noted, however, that national administration

>anything else, merely ratifying already done deals. If you think you can waltz
>up to Geneva in 1999 and have an impact, you are sadly mistaken. That's not
>how the game is played.

Well then the 'Game' needs to change.

Gosh what might happen if 10,000 US hams decided they just wanted to
take their vacation in Switzerland at the same time that WRC-99 was
being held and they just happened to be outside the hotel where WRC-99
was going on? What if they asked to speak to the US delegation and was
turned down? What if they called an international newsconference and
CNN was there? Do you think the story might get on TV here in the USA?
All kinds of possibilities come to mind.

I did NOT say eliminate the code requirement for the General Class ham
(HF). Can NOT do that under current treaty.

I DID say change the code speed exam for the General from 13 wpm to 5
wpm. If we drop the Tech Plus class.

If we only have two classes of hams (no-code Techs and 'X') that would
be allout warfare ... us vs them.
If we have 3 classes one class must take sides against the other. 2:1
But if we have 4 that makes it interesting.

WHY WHY WHY ???
The government works for us. gets power from us. If We THE PEOPLE
(hams) feel there is a need for another change (without having to wait
decades) why can't we expect to lobby (email the FCC and Congress) and
WIN? I am NOT politically correct. And don't ever plan to be so. If
you want to be politically correct ... join the ARRL. If you want to
work for changes in ham radio that you think are necessary ... join
USARA.

You're confusing international treaty with domestic law.

The international treaty sets no speed requirements. US domestic
law brings in the 5/13/20 WPM speed requirements. You appear to be
figuring that you'll modify the US domestic law by tinkering with the
ITU treaty. Right now, as it stands, the US could declare a single
1WPM code requirement and be compliant with the ITU treaty.

Personally, I think that the ITU treaty should remain broad and give the
national administrations the greatest latitude in implementation of the
law. All I want from the ITU is elimination of the Morse requirement for
HF; then we'll need to get the FCC to follow-up with changes to Part 97.
Until Part 97 changes, there's no change, even if the ITU dropped the
code requirement tomorrow.

As Tony said, you really ought to have concise notion of how these
laws are written before proposing changes to them ;-).

Sure, give FULL HF privliages to no-code ops, and everyone else too !
Turn ham radio into another extention of the WELFARE state. I can
absolutely guarrente that it will all be one big CB band, in a very
short time. At that point it will be totally useless as a communications
service, and can then be "outlawed" be the FCC, and the bands sold to
commercial interests.

HELP!!! I'm a new ham and have been given a mint condition DRAKE
rig consisting of:
1. DRAKE TR-4Cw xcvr
2. DRAKE L-4B linear amp
3. HEATHKIT SA-2060 antenna tuner
No power supplies, no manuals, no nothing. Tried the DRAKE
Retirees' Club, etc., no joy. I'm not going to fire up this fine old
rig and "learn by doing" on it (the only tube equip I run are Fender
guitar amps). Any advice on where to find op instructions, pwr supps,
etc.? Any owners/ops of same rig with comments on the equip? No,
I'm not selling. I like old things, and want to make this one
work. Thanks in advance.
BTW, hi guys......

The DOS version of the T7A software is about $ 12.00 and ICOM will now
furnish a schematic of the cable for the asking. RT Systems has a
nice windows version and they include the cable for about the same
cost as the program and $ 48.00 cable from ICOM.
No information has been released on the actual protocol the T7A
requires so using a dumb terminal is doubtful.

Where can I get more info about ampr.org, and find a gateway to it. I want to be able to receive messages via this source from a friend overseas, who has access to a gateway, but it does not allow him to send messages to my regular e-mail address. I was able to send info to him via my ISP, using an ampr.org address.

I guess I need an education.

There is a new web site on the net for:

VINTAGE RADIO KIT CO.

They sell receiver and transmitter kits using tubes. For full details,
take a look at:

http://www.mnsinc.com/bry/vintage.htm

Enjoy! 73 de AF4K, Bry

I was wondering if anybody had experience with using power inverters in a mobile installation? I used a "Power-to-go" 140 watt continuous power inverter to power my Toshiba 425CDS laptop for GPS and APRS use while on a roadtrip a few weeks ago. On my way home, the alternator in my 1990 GMC Safari seized up and stopped turning. The belt was just moving over the alternator and making a hideous noise. I was wondering if running my power inverter almost constantly on that trip might have played a hand in this situation? Or was it just coincidence that this would happen on a 7 year old vehicle with 100,000+ miles. I was also using my Kenwood 733A mobile rig on high power a few times, but not very often.

The Toshiba laptops have built-in power supplies and therefore need 110V AC. Too bad Toshiba didn't leave a 12V DC port on the outside of the case. That would have made it more mobile-friendly.

At the risk of repeating myself, I still think that the U.S. license
structure is rotten. You have _six_ license classes, but still you do
not have a decent entry level class. IMHO, the entry class should have
limited (but usable) privileges, in particular relatively low
transmitter power, _then_ you can reduce the technical requirements.
IIRC, the ARRL suggested some kind of VHF/UHF no-code Novice for the
entry level license, which would have had that kind of
characteristics. Apparently the suggestion came much too late and at
that time it was too little.

>>who can "sell" our hobby to "customers" who've never heard of us. And

>>so on.

I agree with Gary that the entry level exam must contain a lot _when_ the entry level power limit is the ridiculous 1.5 kW. However, most new hams operate at much lower power levels and usually start with some factory made equipment. Based on this observation, an entry class with limited privileges would still be quite usable. In these circumstances, I see no need for a very detailed technical examination. This would help to draw people with different "people" skills into the hobby, without a larger risk due to technical incompetence, than the present situation.

I don't think it is a bad thing to allow more "appliance operators" in, as long as it does not limit the possibilities to experiment for those who are interesting in experimenting. The "appliance operators" are also a useful test load and what is the point of building and experimenting with common infrastructure (such as repeaters) if they would not attract new users. If there are overcrowding somewhere, this will motivate to experiment with new, more efficient modulation methods or to activate a new band.

First, we're not talking about "lowering the standards" ... we're talking
about abandoning (for testing purposes, not for voluntary use) an out-
dated "standard" that no longer serves a positive purpose, but has, in
fact become a detrimiment to our service ..

Second, we're talking about making the written tests more meaningful.
Third, we're talking about revising the license classes to better reflect
the legitimate purposes of licensing ... to assure technical competence
and the ability to operate safely and without causing undue interference.

And finally we're talking about modernizing the technical rules to remove
unnecessary, artificial, stagnating barriers to the use of and experimentation
with new technologies ...

> I haven't lived outside
> of the Southeast so I don't really know what it is like elsewhere, but
> 75 and 160 meters has collected some of the most unfriendly,
> opinionated, bigotted people I've ever had the displeasure of meeting.

Those folks all have passed at least a 13 wpm code test ... the code is
NOT an effective "lid filter" by any stretch of the imagination ... in fact,
I would assert (and I believe that Gary may agree) that code testing seems
to select in favor of the competitive gamester, lid-like personalitites and
against those with the technical interests and skills that we so desparately
need for the future ...)

Leslie ... the ARRL is the illegitimate parent of a bastard stepchild
called the IARU ... which has offices in Geneva and attempts to lobby
the ITU delegates ... however, neither the ARRL, the IARU, or you or
any other private party or club will be afforded a vote or the opportunity
to introduce any sort of proposal before the WRC ... that is strictly
the province of government delegates from government agencies ...

It is VERY important that you come to understand this reality and
accept it ... you are NOT going to get to present a proposal or speak
to the WRC ... to continue to assert that you will will only make you
look foolish and unaware of the realities ...

>didn't care to go back and read the post I was "complaining" about, Jim.
>'Nuff said about that one.

Certainly, one can enjoy SSB phone on HF, if one has the proper class of
license which allows one to operate in the HF part of the spectrum that one
wants to use SSB phone on.

I didn't have to read it. I wrote it. I understand completely what I wrote.
Let me explain it to you, again, since you have a problem following the jist of
this conversation.

Original poster said he had passed ALL the written tests up to and including
the Extra class written test. But had only passed the 5 WPM Morse test.

So I said "Go learn Morse code and enjoy ham radio". I was not implying
that one needs to learn Morse code to enjoy ham radio. I was implying
that if the above metioned original poster was to pass the 20 WPM Morse
test, he would then have an Extra class license, and could enjoy ALL the
modes available to hams in the U.S. on ALL the frequencies available to
hams in the U.S. or if he passed the 13 WPM Morse test, he could enjoy
ALL the modes and all the frequencies available to the Advanced class
license. Nothing in the rules (or what I wrote) says you have to USE Morse
code.

So there you have it. Since the phrase 'go learn Morse code' obviously
causes you to go into convulsions, you apparantly missed what what
was implied while you were rolling around onf the floor. I hope this clarifys
it for you.

>There's good reason for "Da RuLeS" to change and for that reason I'll
>continue to support the flat-out elimination of morse code as a mandatory
>licensing requirement. If nobody ever questioned "Da RuLeS" then nothing
>would ever get improved. I'm not a sheep, Jim. Just because "Da RuLeS"
>exist doesn't mean they're perfect.

Geez, here we go again. Nobody said anything about changing the rules. Nobody
said anything about not changing the rules. Nobody said the rules are perfect.
BUT (read that again - BUT) since the rules are as they are now (i.e., today,

this minute, right now) it is necessary to pass a Morse code test to get certain classes of ham licenses in the U.S. That is not my opinion. That's a fact. And it will remain a fact until, or if, the rules are changed.

I'm glad you're not a sheep, CrACKeD. I'll sleep better tonite knowing that Squiggy won't ask you out for a date.

Buy an HF rig. Plug it in and listen. That's what I did. It drove
me bat-crazy not being able to transmit, and I learned Morse code very
quickly! :)

But seriously, just keep practising every day. Don't skip a day.
It's like learning a musical instrument; If you skip a day, you lose
a week. Use random code practise tapes. Don't give up when you hit a
plateau. If you do get discouraged, turn the HF rig on again.

Drew,

If hams are so arrogant, why are you the one who thinks you're
so much better than the whole lot of them?

The radio hobby is supposed to be fun, whether you are a
CB'er, SWL, scanner listener, ham, or whatever.... And you aren't
going to have any fun if you're going to be this angry at thousands of
people at the same time. Chill out.

Hmmmmm. This sounds a lot like a redux of Glen Baxter, K1MAN's "American Amateur Radio Associatuion" -- or whatever he calls it these days. Hes been around for years; does regular mailings and still only has a small number of followers.

Also, I hope that KE4IKT is at least a multi-millionaire, as it is obvious he has no idea of what the start-up costs of building a successful national organization of any kind. Just getting out the

word to the masses of hams will cost 10's of thousands of dollars in advertising. I would not depend on USE(less)NET to get the word out. Few believe whats posted here.

FOR REASONS OF INTERNATIONAL SECURETY, YOU CANNOT ATTEBND WRC UNLESS
YOU HAVE BEEN INVITED TO ATTEND WRC AND HAVE BEEN CREDENTIALED BY WRC!
IT IS NOT OPEN TO THE GENERAL PUBLIC. YOU CANNOT JUST FLY TO GENEVA
AND WALK IN. IT IS BY INVITATION ONLY. (KIND OF LIKE TRYING TO USE A
PRIVATE REPEATER AND GETTING RUN OFF THE CHANNEL.)

TO KEEP IT SIMPLE, THE ARRL HAS BEEN INVITED THROUGH THE ITU TO SEND A
REPRESENTATIVE. YOU ARE NOT RECOGNIZED BY THE ITU OR WRC AND
THWEREFORE HAVE NOT BEEN INVITED THROUGH THE ITU TO SEND A
REPRESENTATIVE. THEREFORE YOU WILL NOT HAVE CREDENTIALS AND THEY WILL
NOT LET YOU IN THE FRONT DOOR! AND AS LONG AS THE ARRL EXISTS, THE ITU
WILL NOT RECOGNIZE ANY OTHER US NATIONAL SOCIETY AND THEREFORE IT WILL

NEVER RECOGNIZE YOU OR CREDENTIAL YOU.

IT IS THAT SIMPLE! AND IF YOU DON'T BELIEVE ME, I NEED ONLY POINT YOU TO THE LIKES OF K1MAN WHO HAS BEEN CHALLANGING THE ARRL -- IN THE SAME WAY AS YOU PROPOSE -- AND DOING IT WITH LITTLE SUCCESS -- FOR OVER A DECADE. AND HE EVEN HAS A PUBLIC ENDORSEMENT FROM WALTER CRONKITE (KB2GSD)!

>"understand" the higher concepts that can be "learned" through reason
>and experimentation.

The concern expressed by those who worry about memorization is that
applicants will memorize the *pool questions and answers* not that
they'll memorize the actual rules and regs. The contention is that they
just commit the questions and answers to short term memory and don't
really retain anything. Now I'm not convinced that many people are doing
that, but certainly enlarging the pool addresses the concern.

Now I'm not a fan of memorization myself. For things like band limits,
there are wall charts available. I have one up on the wall here. And for

the rules and regs, I have a current copy of Part 97 on the shelf. As Albert Einstein once said, there's no point in cluttering your mind with minutae, that's what books are for. And since band limits and the rules and regs are arbitrary manmade constructs subject to change, a current copy of Part 97 is the best way to deal with them. Anything you memorize for the test may be out of date tommorrow.

Now the principles underlying theory have to be understood, but that doesn't mean memorizing a bunch of detail formulas and constants. Those are printed in reference books too. You need to know the principles involved, and know where to look up the constants at need, but you can derive the formulas from first principles if you don't want to consult a handbook for them. Too many people try to work the other way, memorizing a bunch of detail formulas, but not understanding the principles behind what they are mechanizing. That's rote cookbook behavior, and doesn't demonstrate any real understanding.

>Now, to address your comment that "The reason for testing is to assure

>to take a more rigorous test, but even then you're not going to need
>to demonstrate an ability to change a tire, tune a diesel injection
>system, or rebuild a turbocharger.

If the US entry license were like that of Canada, I'd agree with you. Their entry class is required to use commercial radios and leave the covers on, much like our CBers. But here in the US the entry level is allowed to build and repair transmitting equipment, so they need to have more than mere operating knowledge. The better analogy with autos is that the US license is like the one for a certified auto mechanic, and not a mere operator's test.

Besides, considering the driving records and abilities of current US drivers, is current driver's testing a good model for us? In some other countries, drivers must pass much stiffer tests, more akin to the test for pilots, and they have a correspondingly lower accident rate. I don't think you can honestly hold up US driver license testing as an example of a good testing paradigm.

>Limiting growth with overly restrictive licensing requirements is even
>more short-sighted than prolonging the CW requirements. Besides, both
>the code/no code and the "technical tests" issues are red herrings,
>and have little relevance to what's wrong with the hobby. Arguing
>about them only distracts us from identifying and addressing those
>problems before it's too late.

I don't think I'm proposing *overly restrictive* requirements. They wouldn't be anything an intelligent high school student isn't equipped to handle. But I think the exams need to be sufficient and necessary. Today's exams don't meet those criteria. Some parts of the exams are not sufficient and some parts are unnecessary. So a readjustment is needed.

It is not my intent to generate explosive growth in amateur radio. Rather I want to see that amateur radio attracts and keeps people capable of meeting amateur radio's charter goals and responsibilities. If that results in no net growth, that's better than having amateur radio flooded by people with no grasp of what it takes to meet those goals and responsibilities. But I honestly expect that growth will continue under the sort of licensing system I envision. And particularly that the growth will be in areas where amateur radio is currently lacking.

Our current problem is not a lack of numbers. We have three quarters of a million amateurs now. The problem is twofold. The demographics of current membership is skewed to the very high end of the population's age distribution. And we have disproportionate numbers of people who don't possess the rudimentary technical skills to fullfill amateur radio's charter goals and responsibilities. Those are the issues we have to address.

The Long Island Mobile Amateur Radio Club (LIMARC) cordially invites all to our spring 1997 Hamfest located at the New & Enlarged campus of Briarcliffe college at 1055 Stewart Ave. Bethpage, Long Island, NY. Directions to the campus can be obtained by calling the club information line at 516-520-9311 ANYTIME.

Gates open at 7:00 am for seller and 9:00 am for buyers. The cost for sellers is $15.00 per selling place and $6.00 all others. Reservations are NOT required.

There will be a VE session given at the site.

For additional details email Rich Seltzer, N2WJL at n2wjl@juno.com.

Exactly.

Want to watch them squirm? Propose a "codeless HF" license which only
allows them to operate digital modes... No CW or SSB.... Watch the
"anti-code" crowd squirm at the thought -- they *have* to support the
idea, since this is what they claim the hoardes of techno-geniuses
need access to HF for -- yet, at the same time, they will all be getting
their panties in a huffy trying to find some excuse *NOT* to support it,
because as we all know all they *REALLY* want to do is get on SSB and yack
like everyone else, and they wouldn't be able to do that with this
particular license class!

Heh heh heh... Sometimes I can be truely evil....

> services.

Heh, ok. If you say so. But I wonder if that is really a better gauge of
"real" membership. You proffer that members of ARRL are passive in their
participation. That would seem to be a common dynamic of organizational
life. So use of services, (I'll take your word for the the stats, though
you don't really offer any) would not appear to be a "better guage" at all.

If members were in so much opposition to the ARRL, they would not offer it
their money. You can always borrow a copy of QST or stick to the other
mags...

I have never ranted about "my inability to learn CW" ... I learned Morse
nearly 25 years ago when I first became a licensed amateur radio operator.

I may rant about how the Morse hazing ritual keeps perfectly qualified,
potentially significant technical contributors out of ham radio, but I've
never ranted that I couldn't learn the code ...

I grew up in Cleveland. WNBK was using channel 4. This channel was
also being used by a station in Detroit. WNBK then moved to channel 3
and at the same time changed it's callsign to KYW.

I can't remember how long KYW was in Cleveland before it moved to
Philadelphia.

Chad,

Check the battery by soubstitution. Some aftermarket batteries sold by national chains are just no good. About 1 in 4 of our fleets batteries failed after 1 year of normal use.
At a 400 milliamp draw after 24 hours you have used up about 9.6 amps of aproximatel 60-80 amphour battery . So after 48 hours you have used up 20% of the batteries total reserve. Car starting batteries are not designed for deep draws. Try a Diehard.
Also some rigs draw cuurent through their final amplifiers even though they are not turned on.
Good Luck
Dave Panek

Kevin ... Do you actually think I went to Mexico for the purpose
of getting a ham license there? If so, you're even stupider than'
you generally appear to be ...

> Yes I know
> that our laws don't apply there, that's not the point.

That's EXACTLY the point ... of why I had a Mexican license ...
I was there for reasons totally unrelated to ham radio, but I
wanted to operate occasionally ... so I got a reciprocal license.
The fact that Mexico grants full privs to any class of US licensee
is NOT something that I had any influence over ...

Are you really suggesting that I had some "moral duty" to
restrict myself to the limitations of my US license, when the
"law of the land" actually granted me useful priveleges for which
I was fully qualified???

Ok, public approbation and ridicule?: that's really kind of silly.
Scientists have risked prison and death to pursue creative vision. The
majority of approbation and ridicule I've witnessed has been on these
newgroups where some people are fairly tough (as you are most of the time)
and where others are true jerks who, i'm convinced, are only so insulting
and unfailingly hostile because they can hide behind their keyboards.

Ok, if they're monitoring here they can speak for themselves. I appreciate
your historical perspective which I don't have. But I've noticed changes
and proposed changes in SS usage and rules governing same. I wonder why
you consider the concerns of other people (surely there are intelligent
people in those groups you mentioned) without merit and only caused by
NIMBY.

Haha, well as a liberal arts grad, I admit to not having a course catalog.
But the posts I've read outlining the new vision of theory exams are
significantly above the "average person". You can quibble all you like,
but your skills may be blinding you to that. You simply propose a
replacement filter. Ranks would be truly thinned. Then only people as
smart as yourself can work hf...:). Nah, not a good idea.

That's one side of your paradigm. The other is that the technical elite being held back by morse code exams are not being held back by the physical/mental preparations necessary to learn that skill, but as much by approbation and ridicule (real or imagined). That makes the symbolism applicable to both parties. You deny its ok for one but embrace its effect on the other.

And this constant negative labeling is a tactic that both sides ought to quit...

4470. Re: FISTS

Newsgroup: rec.radio.amateur.misc

Source record: 196960

So many experts on so many things. Someone says the group is growing and the experts need to debunk it since it doesn't fit in with their agenda. Of course we all have seen the laughable claims for the new anti-arrl organization spawned from these ngs. Fists is SIGNIFICANTLY growing and any objective observer would acknowledge that. Of course objectivity is a rare quantity here.

Gary Coffman <ke4zv@bellsouth.net> wrote in article <338f3cf8.32590852@news.atl.bellsouth.net>...

> at less than 0.05% of world amateur population.

So what? Doesn't affect its viability or current and potential influence in promoting its aims:

What is it?

FISTS is a well established and recognized CW organization in the world of amateur radio. Founded in 1987 by Geo Longden, G3ZQS, it now has a membership exceeding 2000, and is growing daily.

AIMS of FISTS

1. To further the use of CW on the amateur bands.
2. To encourage newcomers to the CW mode.
3. To engender friendship within the membership.

> There's nothing wrong with being a small vocal orgainization, of course,
> but growth rates aren't a good indicator of strength at these population
> levels.

Says you. They can be a very good indicator of strength. According to who's definition is, i'm sure, another question.

> There is certainly a growing consensus that Morse testing no longer plays
> a legitimate role in government licensing, but the idea that there is a desire

operation.

The hostilities expressed here (beepers, luddites, etc) speak loudly. No
twisting necessary.
If that's misunderstood, then the hostilities (on both sides) should be
moderated.

That you suggest that those were the reasons that I went
to Mexico is beyond laughable, Kevin ...

You're incredible ... I can't believe that even *you* are so tight-assed
self-righteous as to really believe that it's "immoral" to talk on SSB
and use AMTOR in a completely legal fashion in another country.
You have DEFINITELY got some screws loose, Kev ...

>You completely throw the "work ethic" out the window by such an act.

That, too is an absurd assertion ... furthermore, your "work ethic" has
NO place in licensing requirements, whose SOLE purpose should be
to test legitimate, necessary qualifications ...
